From: Terry
Topic: 27538 Message: 27538

Air Evac now has an aircraft stationed in Ellis Co. There appears to be a new license probably to dispatch that helicopter. Anyone catch a PL/DPL please post it.

From: Lee B Shell
Topic: 27540 Message: 27540

This suggestion came from my railroad list because of the recent news involving the rescue of a train employee from a trestle in Fort Worth:

www.fortworthfire.com

At the main page, select "Current".

As a mere snapshot photographer, I was impressed by the quality of the images.

If this has been discussed on the list before, I have forgotten.

Glen Ellman is a photographer for the Fort Worth Star-Telegram. He's closely associated, although, I'm not sure if there is an official relationship with FWFD. I've enjoyed his work for a couple of decades at least.

Only thing I can find is a public works repeater on
453.600. Perhaps, since Somervell is a rather small
county in size, Glenn Rose units are dispatched off
the S.O. frequencies, as well as rural FD?

Maybe Tom out west can confirm?

From: Tom ND5Y
Topic: 27544 Message: 27546

I can't help much. I don't know if Glen Rose has a police or fire department and I don't know where to look to verify wether they do or not.

The SO and fire info on radioreference.com appears to be correct. I can barely hear the SO and fire repeaters and they don't appear to have very much traffic so I don't listen too often and I have never heard anything on 453.600 or 453.650. I actually drove through there last week and didn't hear anything then either.

27547. Re: Glen Rose frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-03 23:31:59 UTC
From: Chris Easley
Topic: 27544 Message: 27547

Tim,

Here's what I have:

Glen Rose FD & Somervell County Fire - 453.875 PL 71.9
Glen Rose PD & Somervell County SO - 458.725 PL 71.9

Blaine is correct with his presumption; GR FD and county Fire are
dispatched on the same frequency. And the same is true for GR PD and
county SO. At least that's been my observation from past listening.

You might also be interested in 451.125 (don't have PL)
This is supposed to be Commanche Peak EMS.

From: KC5RHB
Topic: 27544 Message: 27549

I think the SO primary freq was listed as the input. Here is what I
have which has been confirmed:

Somervell SO Ch 1 disptach 453.725 (71.9) I believe dispatches for all
PD's in the county which there are only 2 main
cities in Somervell, Glen Rose (county seat) and Rainbow.
Somervell SO Ch 2 453.650 (71.9)
Somervell Fire 453.875 (71.9) handles all fire incidents in the county

453.600 belongs to the city of Glen Rose but I have never heard PD
activity on it.

27550. Re: Fort Worth Fire photos

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-04 04:27:59 UTC
From: Bill Anderson
Topic: 27540 Message: 27550

Glenn Ellman has full access to all fire scenes. He has a radio for FWFD and I believe he is their offocial photographer.
I did the EMS stand by on the TCU 3 alarm fire a couple of years ago. The three people who I noticed the most on the fireground were Dean Sullivan, Kent Worley, and Ellman, who was all over the place. That was the night learned if you saw Worley or Sullivan get in front of them.....cameras are coming.

Yeah, definitely post that DCS or PL if anyone finds it. I
don't know if it'll help out or not, but possibly. All I know is
I get interference and an open carrier on that frequency.
Probably got a paging tower somewhere around bleeding
over.

From: Blaine Brooks
Topic: 27538 Message: 27553

Terry wrote:

> Since it's a narrow channel did you try that mode?

Yeah, I tried that. That's usually my default on the
780 because, IMO, it gives a better signal on
everything (even frequencies that are not NFM).
Thing is..it also attenuates things, so if you have
any interference, it tends to make it stronger.

If it doesn't work out, that's cool. I'm really not all that
concerned with Ellis County (sorry folks down south)...:)

It'd just be something extra to listen to every now
and then.

From: Bill Boyer
Topic: 27557 Message: 27559

Things are all messed up now. Our COP group was in West division, now we are in South division. The substation that was 1.5 miles from the house is still in West division, while our substation is 4 miles further and in the 'hood.

I feel the worst for the officers working the southern areas of South division down towards Crowley though. Their substation is over off 287 and Village Creek -- like 15 miles from their beat.

Sounds like PD is having a hard time with it. Heard one unit say,
"Baker XXX....ugghhhh, Charlie XXX."

Still trying to get used to the change from being a Baker unit.

27567. 911 Calls Article

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-06 13:29:45 UTC
From: Ben Saladino(YG)
Topic: 27567 Message: 27567

Here's an interesting article.
http://www.star-telegram.com/metro_news/story/392693.html

I'll have to read it again when I'm more awake, but an idea came to me while reading it.

For situations when there are dozens of calls incoming about what is probably a single incident, maybe there could be an automated on hold messages connected to CAD that says something like the following. "We are currently taking calls on a traffic accident in the area of westbound 30 at University. If you are calling to report more details about this accident press 1 to continue to hold. If you want to hang up without providing further information, and prevent us from having to research your hang up, press 2. Maybe that could be some system generated number that is unique to that incident, to make it a less likely for someone guy beating his wife from hanging up the phone after she dialed 911. If the person chose to hold, route that call to the same call taker who is already taking information on that particular call. That might help multiple call takers consolidate all of the different details that you might get from so many different people reporting essentially the same thing. Anyway maybe that makes sense to someone out there who could pass it along to 911 system people to consider. Maybe there could be a, "if you've dialed 911 by mistake, press 8", and all of those calls get routed to a separate call taking group, and maybe there's an option to provide more information about how the mistake happened.

From: dvd_rsl
Topic: 27568 Message: 27568

Richardson Police currently have a man barricaded in his home. He is armed, drunk, and threatening to "do harm" to his neighbor.
I tuned in late and so do not have an address. They are operating on RPD Tac 2 talk group.
They have been in phone contact with him but he refuses to come out.
They have asked for extra radio batteries and drinking water, so they must be thinking this will last awhile.

From: Toby Zidle
Topic: 27567 Message: 27569

Interesting article, Ben. 'On-hold' calls are a perennial problem of 911 agencies. It will never go away. 'Hold' time is probably the most watched statistic in any 911 call center.

You're right that the omni-present cell phone has added greatly to the call load. An accident on a tollway or state highway will probably generate at least 20 calls. However, I doubt that one more layer of recorded message is a feasible solution. It just adds waiting time to any emergency that is being reported for the first time. The guy whose home has just been invaded does not want to know that "We are currently taking calls on a traffic accident in the area of westbound 30 at University."

Consider also, "If you are calling to report more details about this accident ..." The caller doesn't know what details are already provided so he's almost certain to hang up before he hears "(to) prevent us from having to research your hang up, press 2." Further, it may not be until the tenth caller phones in that a driver standing beside his car goes into cardiac arrest.

I'm afraid there is no magic solution besides the standbys -- hire more staff, pay as much overtime as is needed.

Toby

Careflite 3 was put on standby for MVA in Hunt County,as the first Hunt Co AMR unit arrived on scene Lifestar 3 comes across on the Hunt Co. Fire/AMR EMS channel and tells dispatch they will take the MVA call,and dispatch ask there location which Lifestar 3 says is leaving Dallas.Sounds like in the old days when taxi cabs listened to other Taxi Cab companies and jumped there calls.I guess Lifestar is scanning fire ops.Channels to get more calls.Just kidding,but it did seem strange.As of now Careflite3 is still on airborn-standby and Lifestar 3 is about 2 mins. from scene.

After a few hours of saluting and playing the game the neighbor refused to press charges and the "suspect" refused to come out. Cops left since no complainant there's no crime. 1200 block of Briarcove was the location. I suspect the neighbor may have embellished the story a bit but when it came down to signing that sworn affidavit he was smart enough to say no. Just my size-up...

A friend tells me there is an aircraft on the pad complete with the portable A/C stuffed in the window. With all the political stuff going on between the helicopter companies and the fire departments there could be a number of reasons they were not called. Of course one could be they were already on a run.

I know that a lot of the paramedics on Lifestar 3 are employees of AMR Hunt Co. I hear them quite a bit acknowledge on Hunt Co. Fire that they heard the request for standby or a go flight. I guess since the employees work with both groups it just makes since they have such a good working relationship. It sure cuts down on the response time, since they do not relay thru 2 dispatchers just to launch.

Air Evac 74, based in Ennis, is operational. We've had them out this way on a few scene responses already.

Most likely, EMSystem showed them out of service. busy with another call, down for maintenance, etc.

Thanks to whoever was paging it out.

Who were the 2 in the area? 1 car with hazards on E/B 820 over the Main St exit. Another car S/B with hazards on traveling S/B Main?

There was some good comms with the FD. It is good to know when something bad like that arises there is plenty of resources. It was an amazing site to see, I am glad the pilot was able to land it safely.

Usually do not go see these things or get out of the house but I have never seen a plane have to make an emergency landing.

Mike, when I was Comm Manager for AMR, I helped develop a communications and dispatch protocol for AMR, LifeSTAR and other Air Medical providers. Basically, a rather complex series of questions and answers helped determine which service would be assigned the call based on status and response time (an in flight helicopter fully fueled usually takes preference over a cold-start helicopter in quarters, depending on location). The quickest response was ALWAYS the determining factor, never the relationship between AMR and LifeSTAR (AMR Dispatches and Flight Follows LifeSTAR).

One factor that I had ZERO tollerance for was a flight service "overflying" anther service to get a call it the other service could have launched and arrived first. I considered that "dash for cash" and it was understood that such was a breech or protocol.

I think (but since I am no longer involved with LifeSTAR and AMR not positive) that what you heard was a decision by the crew on LifeSTAR-3 and AMR that based on location and status (in flight). LifeSTAR was instructed (as were the Flight Following Dispatchers) to monitor radio frequencies enroute, location and status to determine what would produce the best for the patient.

Hope this helps.
Rob

27579. Fort Worth PD Shift Question?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-07 08:18:05 UTC
From: KC5RHB
Topic: 27579 Message: 27579

Before the new beat change this is what I had for the following shifts for the units:

M115 = 1st shift (days)
M215 = 2nd shift (evenings)
M315 = 3rd shift (midnights)
M415 = NPO
M515 = special detail unit

NOW, I'm hearing the midnights units as "4" units instead of "3". So obviously there has been a change in the unit shift assignments. And as I'm writing this I'm hearing Baker 3rd shift units going 62, so I guess its the A B C (early, late) shift thing. Also I'm hearing Specialized Units using a "6". But if anyone has any info on it feel free to let it go.

The officers on duty during the week are now working 4 days on, 3 off.
So M115 is mornings, M215 is evenings and M315 is late night. M415 is a
weekend unit and M515 is the NPO.

Well maybe that will explain the longer shifts I guess. I was hearing units go 62 at midnight and 2am. And I was listening on a weekend night so I guess that would explain the "4"units. I guess the easiest way to find out is ask a NPO I know. Gotta love changes. Ok, thanks for everyone replying back. At least its not as confusing as Dallas's communications, but from what Im hearing its heading in that direction if things dont get worked out soon.

Hello there group,

I live in the McKinney area. I am in need of some assistance with my BC246T scanner that I 've had for a while now. I'm wondering if there is anyone who can show me how to properly program channels into the scanner so I can use it properly. I've been to several sites like RR and have downloaded a easier manual to read but I'm still in need of assistance. I think it can be better used rather than now as the paper weight it is being. I'd appreciate any help.

Thank you,

James

Hi James,

One thing you might consider, is going to www.butel.nl and download
the ARC 246 programming software ($39.95) for your BC246T.

With the newest version of this software you can import trunked and
conventional systems from radioreference.com directly into the
software. Makes programming the scanner a whole lot easier.

You would also have to be a paid subscriber to RR to be able
to import from their database. It's money well spent in my opinion.

I don't own a 246T, but thought I'd throw my 2 cents out there.

James, I second that. I use the ARC246 software for my BC246T. It is a great buy!!!! It is very user friendly. If you can use a spreadsheet format with the values already added, you can use the software. I dont subscribe to RR so i got everything from Ben's web site. There are printable worksheets out there that you can put everything down and work out which systems you want and where. I dont remember where i got mine, but i will look later when i get a chance. It didnt take me long to manually put the systems in. If you want specifics on how i set mine up, email me off list and ill give you the details on how i set them up using the software.

Are they on the ETMC trunked system or still on high band?
Either way here is what I think.

"Many of the outages occur in creek bottoms or other low-lying areas."
"The outages are likened to a typical cellphone call in a rural area.
One minute the reception is good, the next minute, it vanishes."
"If we can communicate with folks in space... we can surely communicate
with folks that are a few miles away."
Duh! Ever hear of line of sight?

"faulty handsets or the lack of training"
I say lack of training. They probably keep their hand helds on their
belts, use speaker-mics and wonder why they can't talk out of a creek
bottom.

"The county's communication guru and Sheriff's Department captain,"
You can't be both.

The laws of physics apply to everybody. First responders are not exempt.

I believe only the City of Waxahachie police/fire is on EMTC trunked. Everyone else is business as usual. The City of Waxahachie police & fire are also simulcasting their signals on VHF.

Good thoughts about not transmitting with the handheld on your belt. Not a very good way to get out. The Ellis County Amateur Radio club is planning to install multiple repeaters throughout the county with different PL tones 145.410 - (110.9) to solve the problems with deadspots during public safety and Skywarn events. I am sure there will still be issues with handhelds and not being within line of sight of the repeater regardless.

The only agency in Ellis County that is on the ETMC system is
Waxahachie. None of the others have switched over, & remain on
high-band. (ETMC EMS, which does provide service for much of the
county is, of course, on the TRS system.)

As Tom pointed out, there are terrain problems, especially in the
southwest area of the county, where there are significant drop-offs as
you go west or southwest from Midlothian. That leaves the area radio
'blind' to Midlothian's tower, and undoubtedly to the ETMC system as
well, as that tower is on the north side of Waxahachie, an even worse
angle.

The key wording in the article is this:
"We improved the equipment that we had at the most minimal cost we
could afford because we knew this [narrow bandwidth] issue was going
to arise," Capt. Knight said.
In other words, a cheap non-fix, because they'll have to do something
more expensive by 2013.

What's the old saying? You can put lipstick
on a pig, but it's still a pig....Maybe they can use
a CB radio for dispatch. Heck, it's low band, it'd
probably go further....LOL

This is an interesting case as the county actually
does have dead spots and issues that could actually
benefit from a new comm system, rather than a
Motorola dog and pony show as we hear the sound
of 30 million or so flushing down the drain. Whatever
the end result, they'll have to decide soon. Hopefully,
(and in a perfect world scenario), they will think of the
public safety units out in the field, and the imperative
nature of having the clearest most reliable communications
possible. I say P25 digital narrowband, maximum wattage
output, and 4 tall transmitter sites in the quadrants of the
county with voting receivers. Each site would carry the
same frequencies for VFD's, S.O., local agencies, and
narrowband mutual aid for interoperability. Just my
thoughts, but I'm certainly NOT an engineer.....:)

Only time will tell, but I'm sure they'll have SOME
type of communications.

Best bet is to keep a search bank for 138-144,
148-150.8, 162-174, and 406-420 mhz, especially
the new realignments in the 400 band. I recently
found some new digitals there. Plenty more to come
I would think....

I have a friend that works special duty on North Patrol. His shift is usually 6p - 2a. His shift varies as the need for his unit. They sometimes work 8p - 4a. This might account for some of the 62's you're hearing. I also know the gang unit work varied hours as well. I've seen them on the streets nightside as well as deep nights. Some of them might be ones your hearin as well.

The PIO used to have a pamphlet that relected the battalion areas but they recently realligned the battalion areas down south to accommodate the opening of Station 40 so it is out of date.

Assignment to fires is a function of where is the fire and who is available. The CAD checks the AVL to see who is closest and also available. We recently had a multi alarm fire in Oak Cliff and a box came in during that time, Bn 7 from North Dallas was filling in at 15's and was first in BC.

It is all about the miracle of computers making our lives better.

Channels 52 thru 69 are being freed up the analog to digital conversion. That means all of the 700 mhz band will be up for auction except a special segment set aside for public safety. Public safety is getting 764-776 MHz and 794-806 MHz. Part of the money collected from auction is going to pay for the $40 coupons that people will get to upgrade to a digital receiver.

There will be an additional site added to the system to serve the west end of Flower Mound. Have heard that the location is co-located with Denton County at Grapevine Lake. Have not heard if there will be a third location to the East.

Trying to monitor and capture talkgroups for
the new Frisco P25 800 system on Unitrunker
but getting nothing. Unitrunker says no signal,
and doesn't decode whatsoever, even though I
have it set for P25. Am I doing something wrong?

Control channel data rate sounds very high...

It appears Arlington has a bait car program. I've been listening to Arlington East and they have a car getting some looks. It sounds like they are waiting for it to move so they can pounce on the a-holes stealing it.

I just found out they've been doing this since July 2006. This is the first time I've heard the radio traffic associated with it.

If I recall correctly, the DFW cities et al share a couple of bait cars -- when one area gets wise, they move it elsewhere. I wish they would publish the videos like they do on Cops -- much fin to see the idiots locked in a car that won't go, surrounded by police.

Richardson had a bait car back in September. Not saying where it was parked but my friend called the police to report it cause it had been in the parking lot for a while. Nothing happened for 2 days and he called back to complain. About 20 min later a detective came up and told him it was a bait car. I got a good look at it. So, if you say they share the bait cars that would make sense. I was wondering where they got it.

27615. Frisco went digital?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-17 14:35:19 UTC
From: Jason Simpkins
Topic: 27615 Message: 27615

I just saw anothers post on the new p25 in Frisco. I have been holding out on getting a portable digital scanner cause no one that I listen to is digital. Is there any other cities that are planning on going digital? Like Rowlett, Richardson, Garland, Rockwall, Plano? Those are the cities I listen to.

Hi Jason and the group. Here is what I know as of this date (it seems to change weekly) hehehe.

Back in November of 2007, Garland City Council started the wheels moving to R&D and purchase a digital system. This would include Rowlett and Sachse. I did not think too much about it at the time. Weellll, after the last revision (#6) of the "Texas Statewide Interoperability Channel Plan" I can see where this is all heading. As of 12-31-2012, all analog NPSPAC channels are to be shut down. As of 01-01-2013 the NPSPAC package goes P25. Putting the two known facts together, Garland "might" be looking to have a P25 trunking system (?) up and running by that date. The (?) means that they "might" also establish a non-trunking P25 system (as the DPS has done). Theirs is SSSWWWEEEETTTT.

I have an inventory of all of the Rowlett radios (we own our radios) and we are talking about getting our non-P25 radios replaced.

We must get through rebanding first and move forward from there. I have lost sight of what stage of rebanding we are in right now. I fully expect Josh (Garland Radio Shop) and Motorola to drop by just any day. We have already sent them our man-hour charges, as we will have to have somebody escort them to the different radio sites.

At present, I am "spearheading" a project to install three antennas on the new Kirby Road water tower (two for city radios and one amateur dualband). Progress will speed up after the next council meet, as that is when the tower will be accepted by the city. Then my folks and a communications contractor (to be announced later) can start "drilling and pounding" on the tower. hehehe

Be safe. y'all.

Maybe that was why Fort Worth didn't act on a car we found. There was a right-new car with buyer tags and a torn up front bumper that sat at one location for almost two weeks -- we called on it several times and it finally disappeared. I started to call the dealership that sold it to see if the owner dumped it when they couldn't make the payments.

I probably shouldn't say this but one way to check on the car is to run it. I ran it on Public Data the one that was in Richardson and it came back to the City of Dallas. So, what the officer was telling me was true.

Blaine, I'm having the same problems trying to decode Frisco from here in McKinney. My 780 is receiving the signal fine, but UniTrunker doesn't recognize it even with P25 decoding turned on. Perhaps the P25 control channels just require us to be a little closer to the source in order to decode properly???

27620. Question about Adaptor or Cable

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-18 01:52:38 UTC
From: jamesersf
Topic: 27620 Message: 27620

I have a BC246T Scanner. I have recently downloaded a program to be able to program my scanner. I went to plug in the cable to my laptop and found that the cable port on my computer is a 15 pin male side port and the cable itself is a 9 pin male sideed cable. Does anyone know if an adaptor is made and can be used to make this work? Am I better off getting a USB cable that will fit the smaller side that goes into the scanner itself and would this work to transfer data?

I don't realy know very much about scanners at this point. I'm having a problem getting to use it and would like some feedback.

Thank you,

James

A 15-pin port isn't serial. Probably video or something else.

What sort of laptop? You may not have any serial connections at all.

If a USB cable is available and supported by the programming software,
that's what I'd recommend. Serial is dying anyway.

James,

My suggestion would be to get the IOGEAR USB to serial cable.
Model GUC232A. I'm presuming your using the cable that came
with your scanner? If it's like the cable that came with
my BC396T then on one end you have serial and the other end
plugs into the scanner.

Anyway, with the GUC232A you simply connect the GUC232A serial end
to the serial end of your programming cable. Then connect the USB
end to your laptop. You'll need to have the driver file for the
GUC232A of course. Easily obtained through IOGEAR's website BTW.

Once you have the GUC232A installed to your laptop, connect your
scanner, open your software and configure the port settings.
That way your software will know which port the cable is
connected to. After that you should be in business.

If you have any questions feel free to reply to me here or off-list.

Good Luck,

Chris Easley

Perhaps....

I don't know. I'm not an engineer. But I can tell you I
get the signal from the control channel pretty strong
here, so it SHOULD decode on Unitrunker, as Unitrunker
has decoded MUCH fainter trunked systems before from
my location.

The PRO-96 does detect the system ID and such so I
know it's indeed operational. Perhaps Unitrunker
doesn't generate talk group logging if a system is in
"test" mode or something...I don't know.

So far, no activity on the PRO-96.

Hey Blaine,
There is something going on with that trunk as I can decode the signal
here in west Plano but it's really low especially during the daytime.
I am only getting a 10% decode during the day and 30% decode during
the night. You think that I would be getting a higher decode rate
considering that I am not really that far from the southern border of
Frisco.

Anyways this is what I have decoded so far with frequencies, TG and RID's

Frequencies
856.6125 CC (Channel 129)
857.6125 Voice (Channel 209)
858.1875 Voice (Channel 255)
858.6125 CC (Channel 289)

Talkgroups
3 Unknown
501 Unknown
502 Unknown

Radio ID's
201 (Used TG 501)
202 (Used TG 501)

Finally got Unitrunker to decode it (barely). Only getting a
13% MAXIMUM on signal level with the outside antenna. In
comparison, even at it's distance, I get over a 90% decode
on the Arlington system with Unitrunker, and I don't even
monitor that system with the scanner on a regular basis.

So something is definitely funky with this new Frisco system.
Perhaps power is low, or the antenna is not at a permanent
location or good height while they are in the "testing" phase.

Thanks for the confirms.

I normally don't monitor Frisco. Those that do....Has there
been ANY mention of the new digital system....references
to new talkgroups, etc. on the PLANO system OR has
everything still remained the same?

I haven't monitored Plano in a while. I really should and see if
there is any mention of the new system. There is another TG I got
yesterday morning which is TG 505. So far there is only the 2 Radio
ID's that have shown up and no new frequencies.

On the true P25 systems like Austin's, Frisco's, and soon to be Parker County's types, do the TG IDs not need to be divisible by 16 or 32 (I always forget which it is)?

Correct. P25 does not use status bits as part of the talkgroup.
They can be numbered 1,2,3 etc...
Does P25 still do patching, multiselect and emergencies thought coding of
the signal another way?

Yes. There are seperate status words in the P25 data stream that indicates this.

I believe the following training guide covers it (but I have only skimmed it):

http://www.p25.com/resources/P25TrainingGuide.pdf

Correct. P25 does not use status bits as part of the talkgroup.
They can be numbered 1,2,3 etc...
Does P25 still do patching, multiselect and emergencies thought coding of
the signal another way?

> Have you tried runiing Pro96com? It logs P25 system activity.

Installed it and I'm getting a 100% receive rate
on the control channels with the Pro96com
program latency set to 25ms.

So far, nothing logged though.

I went mobile with Unitrunker today up to the top of the parking garage at 121/Tollway next to the Roughrider's Ballpark. I was able to decode, but only at a maximum of 33% so there very well may be something up with that system. I did not see any activity while I was there though. Glad to hear Pro96com is working well. Maybe it's about time I invest in a digital receiver!

Thank you Myles and Paul for the clarification and additional information.

I can't wait until Parker County goes true digital so I can play around with a real P25 system. I have Trunker 3.8.3 set up where I can monitor and reaction tune my BC296D to the NASFW 3600 baud mixed analog/digital system. Will I no longer be able to use this version of Trunker on a true P25 system, and if so, can anyone explain why? I believe I heard in the past that the data channel is digital on true P25 systems so I'm guessing I'd need a discriminator tap on a digital scanner or I'd have to use the soundcard/speaker output method which I personally don't like as much due to the loss of some data.

I really haven't been keeping up with the whole P25 9600 baud system information due to the fact Austin (out of my monitoring range) was the only true P25 system in Texas until recently.

The crontrol channels are up on 152.06 and 152.09, two more sites yet to come on line.
I have been monitoring some chit chat on the new system, sounds like the new radios are being installed/hand helds distributed to some folks already.
I found another document from Aeroflex that explains P25 trunking OSW's. There are 2 modes: implicit and explicit. From what I have read it looks like Parker Counties system is using implicit. (All of the necessary instructions written into each radio, the CC doesnt broadcast full frequency info for the sites).
(The PSR500 has been able to receive voice grants).
Ed

From: w_r_adams1
Topic: 27636 Message: 27636

This is a little off topic, but somewhat related.

Which AM/FM radio stations do you recommend listening to for
local "breaking" news in our area? Is there a timeframe for getting
local news?

When I scan the news/talk stations all I seem to hear is syndicated
shows delivering various rants that could be scripted weeks in advance.
When there is a break for news it comes from a national feed. Where
would you tune to for information on a local emergency?

Of course this situation is good for generating interest in scanning
the public service bands. . .

Hey David,

It's not real readable, but I have an EMS section in my 996/396 files on my website. There are several LTR frequencies that I monitor in conventional mode. 463.3 works well for me in Bedford. Otherwise, 464.1, 131.45, 131.675. The 155.28 and 155.34 aren't used anymore, but you never know when they might pop up again.

I'm sure there are some things that have changed, but that's what I've got for now.

Personally I listen to 454.075 from my location
(one of the Passport LTR home channels), as
well as CERN, 131.45, and 131.675. With those
programmed in, I rarely miss much. 463.300
is also a good one for the Passport system, as
well as 483.0625 (Dallas Metro North and East).

> local "breaking" news in our area?

Order of preference for "breaking" news for me:

1. The scanner (or scan-ners) ...;)
2. KRLD
3. WBAP

KLIF gets the chopping block for me. I don't like their programming so I don't listen to their news. Can't stand Rush, Hannity, or the Mad Jew in the evening on WBAP, so I tend to stray from their news element as well, although when done correctly, they do a very good job. Jim Ryan is an excellent reporter. I find traffic much more timely on KRLD (especially afternoons). Some of WBAP's reports are pre-taped during this time, blowing the accuracy element out the window. Sorry 'BAP , but I know your secrets....;)

KRLD also gets my vote for timely weather alerts. Love him or hate him (because he just LOVES to hear himself talk), Brad Barton does do a great job covering the weather.

Honestly, in keeping on topic, I prefer the SCANNER over any "news" station any day. So many things I've heard never makes the news. And you have a front seat to the action. Back up scanning the public safety with monitoring the traffic services, local ENG, and medivac services, and I'd say you won't miss much!

Getting full signal, VERY STRONG here in Flower Mound.
Gotta' love good 'ole VHF for distance coverage!

Nice to finally hear Parker Co. again. Except for their
couple or so VHF (that never really carried the GOOD
stuff), their old LTR sucked for those monitors outside
of the county.

I've heard a few transmissions already, and it's sounds
just like DPS (as in RIGHT NEXT DOOR!).

I don't think it is an issue of RF signal strength, but instead the difference in decoding requirements. You can have pretty bad audio from the discriminator output and still decode the Motorola 3600 baud data channel. For 9600, you need cleaner audio. And it doesn't matter how well you can decode 3600, it is a whole new ballgame.

The Trunk Software forum on RR has several posts dealing with the issue. It looks like you need to put in a buffer preamp on your discriminator out line.

Here is one post

Excuse me for the slightly off-topic post, but along those same lines:

The guy who put that site together has a weekly radio show he's recently started up that's along the same lines. He airs all sorts of old jingles, airchecks, you name it - from former jocks and stations here in DFW. The stuff is pretty cool.
http://www.thehificlub.net/ That's it's website.

Enjoy! :)

27652. Frisco

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-23 02:01:18 UTC
From: Blaine Brooks
Topic: 27652 Message: 27652

Decided to monitor the Plano TRS this evening.
FWIW, Frisco is still very much active on this
system with their talkgroups. FD/EMS & PD
were all active when I was monitoring. No
references to new radios or system
whatsoever.

Subject: [dfwscan] Commercial news radio stations?

This is a little off topic, but somewhat related.

Which AM/FM radio stations do you recommend listening to for
local "breaking" news in our area? Is there a timeframe for getting
local news?

When I scan the news/talk stations all I seem to hear is syndicated
shows delivering various rants that could be scripted weeks in advance.
When there is a break for news it comes from a national feed. Where
would you tune to for information on a local emergency?

Of course this situation is good for generating interest in scanning
the public service bands. . .

Bill

You will need to go to Unitrunker. Trunker 3.8.3 only decodes Moto Type I/II systems (StartSite/Privacy Plus/SmartNet/SmartZone/SmartZone Omnilink). It does not know what to do with the 9.6Kbps P25 control channel.

The data (control) channel is digital on all systems (even Moto Type I/II).

You will need a discriminator-tapped radio to adequately decode the control channel. Even the Moto 3.6Kbps control channel really needs a discriminator tap for optimum decode. This does not have to be a digital radio - you can just as easily use an old 2006. You will need a digital-capable radio if you want to monitor the voice channels, however.

Terry

Subject: RE: [dfwscan] Re: Frisco 800

Thank you Myles and Paul for the clarification and additional information.

I can't wait until Parker County goes true digital so I can play around with a real P25 system. I have Trunker 3.8.3 set up where I can monitor and reaction tune my BC296D to the NASFW 3600 baud mixed analog/digital system. Will I no longer be able to use this version of Trunker on a true P25 system, and if so, can anyone explain why? I believe I heard in the past that the data channel is digital on true P25 systems so I'm guessing I'd need a discriminator tap on a digital scanner or I'd have to use the soundcard/speaker output method which I personally don't like as much due to the loss of some data.

I really haven't been keeping up with the whole P25 9600 baud system information due to the fact Austin (out of my monitoring range) was the only true P25 system in Texas until recently.

Yes. There are seperate status words in the P25 data stream that indicates this.

I believe the following training guide covers it (but I have only skimmed it):

Correct. P25 does not use status bits as part of the talkgroup.
They can be numbered 1,2,3 etc...
Does P25 still do patching, multiselect and emergencies thought coding of the signal another way?

27658. USB1 Cable for Bearcat 246 Trunk Tracker

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-24 14:44:08 UTC
From: Randy Rogers
Topic: 27658 Message: 27658

I just bought the USB1 cable and downloaded the BC-246T_V2_10.scn and BC_VUP_v1.5.2.1.exe drivers but it is not finding my scanner.

I get an error message that says "No communication, connect or switch on BC346T. Select BC246_Rs232 setup to select serial communications parameters."

I have tried the RS232 setup with no success.

Can anyone advise me of the solution to get the USB1 cable to work as well as the recommended baud rate?

Thanks and stay safe all...
Randy

Did you go into the 246's menu and open the serial port on the radio.
That port is shipped "closed".

Bobbie Beers wrote:

> have heard brief transmissions before....license checks but not too much else.

And you won't.

USPS Inspectors (at least for me) have become extremely
boring and a non-listening issue over the years. I no
longer scan them. It used to not be that way (just like many
federal agencies). USPS Inspectors (and their resulting busts
and surveillances) used to be quite fun to listen to. I know
I had many a good listening experience in past years while
living in GA, FL, and MO.

<soapbox on>

Many of the PC crowd, paranoia nuts, and "always do-gooders"
in the scanning world will say we're the cause of it by publishing
fed frequencies and discussing their communications, to which
I say "bull$%#!". The publishing of fed frequencies and
communications has been going on for years, with many thanks
to PopCom, MT and other less mainstream publications. It's the
advancement of newer technologies that have pushed those
agencies that we used to listen to into that "where the hell did they
go? syndrome", as well as current "terrorist paranoia". It's better
to blanket the systems as a "whole" with encryption than to say
"Oh, we're just encrypting to keep the possible terrorists from
listening". PDA's, Nextels, pagers, even IPhone's are thrown into
the mix. It's a HUGE technology world now that doesn't just have to
rely on a "repeater network" to get the job done. There are some
feds that are wary of the "scanning community", but I'd be willing to
bet most couldn't give a rats if we're listening to them. They are
way too concerned with other matters at hand to worry (or deal) with
the scanner geek. It's the head honcho idiots in DC that think we're
all terrorists that piss me off, that don't realize that we are much more
interested in the "workings and operations" of our government, than
trying to destroy it. They just don't get it.

<soap box off>

Contrary to the naysayers, there is still PLENTY to listen to out
there fed (and military wise). A little searching might uncover
some "gems". And, oh yeah, make sure to post them to piss
some people off.....If I recall I heard some encryption on
173.9875 a few months back while searching ....heh, heh.....:)

Searching the media bands before heading
into work this morning and discovered a new
(at least to me) frequency for KDFW.

It's 450.1375 PL 85.4, and I believe identified
as CH 3 on the radio.

If memory serves me correctly, I actually think
this is assigned to Metro Networks and was even
assigned with I was there, but was never used.

Guess, they finally found that "future usage" for it!

If what you saw was a FLIR camera, they have been on selected Plano PD cars for years.

They sense infra-red heat and are most often used in foot pursuit situations to locate subjects hiding in thick brush, etc. They're also used at MVA scenes to locate someone who may have been ejected and is lying unconscious in some obscure place. Those cameras can be life savers.

At least its not female impersonators.

Seriously though, I'm surprised one of these clowns hasn't been shot already, either by picking on some gangstas or by an armed citizen who thinks he's about to be carjacked.

There have been some unpublished incidents locally where the bad guys were driving retired police cars or similar models.

27677. suggestions for 136-171 MHz scanning

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-01-29 16:44:57 UTC
From: Chris Webster
Topic: 27677 Message: 27677

My 2-meter mobile rig receives from 136-171. Excluding the 144-148 ham band, what interesting frequencies you recommend for scanning?

The radio has 60 memories. I will use:
- 25 or so in the ham 2m band
- 5 for MURS
- a few for NOAA weather radio

So that leaves me about 25 for other frequencies of DFW (more Tarrant) interest.

thanks, chris

Well, it depends on really what interests YOU. That's a big swath
of frequencies. Are you more interested in public safety, state
stuff (like forestry), media, federal?

At the very least, I would suggest listening to DPS.

Isn't DPS in the DFW area all P-25 now? Chris won't be able to listen if this is true.

Only analog DPS is Waco from what I understand. That is the last area
to be phased over.

From: Code 3 Productions
Topic: 27692 Message: 27692

I have an Icom 2 Meter HT for Sale, as well as a (beat up, but fully functional) Radio Shack Pro 93 Handheld Scanner (fully programmed)

You can find the 2 Meter HT Here - http://dallas.craigslist.org/ele/558805791.html

Asking $100 for the HT

Asking $60 or best offer on the Pro 93 (Dogs got ahold of it, got some bite marks on the battom, belt clip missing, and battery cover missing) However it functions flawlessley still.

If interested, email me, or call me at 214-736-6242

Thanks

Sounds like the Lewisville TRS is now multiple site.

The audio quality is lower than it used to be for me and I am hearing
the "click" of the voting system after nearly every transmission on the
system now, and don't remember hearing that yesterday.

Wonder if P25 will be far behind now?

I completely agree with Jay's and your comments.
The audio quality has SIGNIFICANTLY degraded for
me. Audio used to be wall to wall 5 by 5, now it's
scratchy and completely cuts out at times even with
an outside antenna 30 or so feet up! Ridiculous!
I'm extremely disappointed with this new site junk.
I certainly hope the signal improves, or the techs
starting tweaking it pronto!. Have any units
complained?

Perhaps I should have said SIGNAL STRENGTH instead
of AUDIO quality. My fault. Guess it's just the old radio
guy in me, but I see audio as the whole enchilada. If it
sucks, it sucks.. across the board. I like loud and clear
for this system (since it's only 3 miles away) and right
now I think the signal strength is horrid for the Lewisville
TRS. I'm getting that "picket fencing" kind of signal
(scratchiness and cutouts). It actually sounds EXACTLY
like the NE Tarrant system when I try to monitor
Grapevine FD. Sometimes clear, but most times scratchy. Have
NEVER had that before with the Lewisville system. Ever. It's
almost like the transmissions are now primary defaulting
constantly to the tower farthest from my location, instead of
Rockbrook Tower.

I find it interesting that you guys on FD haven't experienced
any problems with cutouts and such. Guess that's the difference
between a 3500 dollar XTS radio and a 600 dollar scanner.

Anyone see the new toy that Richardson PD got. They got a automatic vehicle recognition system. This is exactly what I saw on one of their units.

Fort Worth Careflite crew dispatched
to an MVA at 317 and US 67 with entrapment.
It's those rural one's that are usually the baddies.

Too far away to really get a good copy, but I'm
hearing some of the on-scene ops on 158.940.
6CF landing in the westbound lanes of US 67.
Sounds like might be multiple patients.

Getting ready for a trip up to your village of DFW.
Noticed there is no mention of an ETMC site in Corsicana anymore.
All they have now is the 868.9875 MHz MDT.
Is Waxahachie the southmost site near I-45 now?
I don't count Crocket since that's a bit out of range from I-45 through the
woods.

From: Brent Willcox
Topic: 27700 Message: 27720

I don't have the external antenna, just the 800 mhz RS duckie. I am disappointed to know that your external antenna isn't doing any better :(

Both my 95 and my 2051 are having a real hard time, its almost like the Rockbrook tower is either way lower power than it used to be, or its not online at all at this point. I would lean to "not online" as I used to be able to take the antenna completely off either scanner and still get the system and can no longer do that.

May fire up the DF gear and see if I can determine what site it IS transmitting from.

The units don't seem to be complaining that I can tell. I only seem to be hearing Coppell and occasionally FM with any consistency.

This sucks, especially compared to what it used to be. I'm hoping that either Rockbrook returns or they get the simulcast alignment fixed so we get our rock-crushing signal back.

When I lived in Hurst I heard the snap crackle pop and picket fencing type noises on the Fort Worth, NE Tarrant, Irving and Arlington systems because they are simulcast on multiple sites. I'm not familiar with Lewisville. Did they only have one site before?

Ft Worth has/have some of these as well. An officer I talked to there says they are trying several vendors. It's a cool idea and one of the neatest thing is the ability to log tags as an officer approaches a scene. Often in a city (not Dallas!) where cops have good response times the offender passes them while they're enroute. The issue I see is the amount of data and how the cities are going to handle it. It's going to really bog down the MDC channels and if many cities start using them I would think the state would have a difficult time as well.

Terry

all of our units were complaingin heavily yesterday....the radio people were out in force yesterday also trying to fix it...its weird we used to be able to hear everything inside the building with a handheld now theres only about 4 places you can stand inside the building and get audio if you move one foot to the left or right its all scratchy and cuts out

Blaine Brooks <blaine.brooks@...> wrote: Brent Willcox wrote:

I completely agree with Jay's and your comments.
The audio quality has SIGNIFICANTLY degraded for
me. Audio used to be wall to wall 5 by 5, now it's
scratchy and completely cuts out at times even with
an outside antenna 30 or so feet up! Ridiculous!
I'm extremely disappointed with this new site junk.
I certainly hope the signal improves, or the techs
starting tweaking it pronto!. Have any units
complained?

Jason, DPS Greenville is dispatched out of Sulphur Springs now, I'm pretty sure the Royse City guys are the same bunch. You might try 159.2175 (P25).

Also, for any of you that would like to monitor Greenville PD and don't have a P25 capable radio, I was listening to some of the national mutual aid channels last week and found Greenville simulcasting on VTAC3. That freq is 158.7375. I don't know if it is permanent or not, but they are there now for your listening enjoyment. ;)

God speed to the shuttle crew today...another flawless launch. Which brings up a question, does anyone know where the NASA audio rebroadcast on 145.19 originates from? Do I have a chance in hades of picking it up in Greenville? I'm hearing nothing so far today.

Oh how odd that you just posted this. Last night I was just searching and came across 158.7375 with a decent signal. I couldn't figure out where it was coming from but it was digital. You just answered my question. Also I am not sure where DPS is dispatched out of but I had DPS unit over here one day and he said that he is out of the office in Garland on 30. So, would that mean he is dispatched from there as well or could it be out of Greenvile?

Another question. If the frequency is 158.7375 my radio changed is to 158.7400? I am assuming this is a step thing but no matter what I did it changed it. I can still pick it up but wonder if that makes a big difference.

The step is 7.5 MHz. I have a BC780 that if you try to program it with software, it will not program correctly because the band plan was changed. If you manually program the step size on your scanner it should program correctly. If your scanner doesn't support 7.5MHz steps, you'll still pick up the audio on 158.74, but it won't be as clear. Not sure on the DPS office, could be either Garland or Greenville. I just figured since Royse City was so close to the Hunt County line, it was Greenville. I could very well be wrong. A family member got a traffic ticket recently and the DPS unit was parked at I30 and FM 2642 (the county line) and the paperwork came out of Greenville.

I have heard the signal on 158.7375 clear as a bell and recognized the street names they mentioned, so I know it is Greenville PD. But some days it is digital and other times in the clear. Encryption maybe?? Anyway, it's worth a shot in trying to monitor.

The last I paid attention to Greenville they were running a mix-mode system (both analog and P-25). It's narrow deviation with NAC 293 on P-25 and DPL 346 on analog. Greenville PD has had encryption for many years. From the early days of voice inversion, then to DES/DVP. I would suspect they have it today as well. I've always wondered if that's tied to the fact E-Systems, Raytheon, L3 have a huge operation at Majors Field or if they just don't like Josephine sitting at home doing her knitting and knowing when they are bringing the dispatcher food!

There is a tower on the south side of I-30 in Caddo Mills if I remember correctly. I know the FBI repeater is there and I thought DPS Sulpher Springs could transmit from there as well. As far as quality of communication goes digital sucks compared to analog. If you listen you'll hear DPS trooper say things like "you sounded like R2D2 and I didn't get any of it" and "never heard a thing on this end". My Astro gear sounds better than the scanners but it still doesn't sound good unless the signal is perfect. Of course the other morning I was hearing DPS San Antonio loud and clear!

My bet is on Josephine and her good old boy Bubba. (there are lots of Bubbas in rural city government)

L-3 I don't think cares one iota. Their security channel is 152.48 and sounds more like McDonalds. But it does get pretty quiet when a SAM aircraft is in town.

Hmm, FBI has a tower in Caddo?? I know the tower you are speaking of. Right next to the boat junk yard. Really close to home, but didn't know who was using it. Is that the 163.4375 Dallas channel? I'll have to check that out.

I've been gathering all of Hunt Co Fire and AMR's QCII tones this week for my BC396T. It's been kind of fun actually, using a computer-based oscilloscope to read the tones. I'm cheap and not paying the $40 bucks for the ComTekk decoder. Works like a charm!

DPS repeater for Hunt Co is located on the tower @ I30 and Moulton behind the putt putt golf. I was working on a phoneline for a paging company and they actually have a speaker in the building playing the frequency. I also know that some of the constables and Sheriff officers still use the old frequency of 155.4900 to contact Greenville because they don't have digital radios. I will try to find out if they have DES on the new digital as I know the officer over dispatch.

Anyone in the DFW area have experience with either the PSR-500 or 600?
I understand the 500 is on Mft Backorder, but it appears the 600's are out in the world now...

Any compelling reasons to go digital in DFW yet?

Thanks!

Well, TSA at DFW, Grand Prairie PD/FD, and Mansfield PD/FD are digital as is DPS. There might be a couple of other federal/military using P25 unscrambled. Of course, I'd have to recommend the BCD396T or BCD996T (or I'd be fired).

:)

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-09 00:43:39 UTC
From: barrybarge@tx.rr.com
Topic: 27735 Message: 27738

I have had my PSR-600 for several weeks now (base use only), and am favorably impressed. I also have a BCD396T, a BC780XLT and others. In general, the PSR-600 is more sensitive then my Uniden models, however, this is not always an advantage. I had trouble with DPS P25 mode, and had to turn on the attenuator to receive Dallas (Garland) DPS. I still had problems receiving the Sherman DPS repeater on 159.2175 (as well as Sulpher Springs), until I got an email response from their tech support (on a Saturday night!) that suggested using an FM trap to improve the VHF P25 reception. And like magic it did!! All is well now. (Obviously they know of this issue, based on the response. I was also impressed that the tech support person who responded was also a scanner enthusiast himself, as he discussed his home antenna system and also had to use the trap.)

I have not used it for Mil Air or much UHF, so can't comment on its sensitivity on those bands vs. Uniden. It does seem more sensitive on 800 MHz than my Unidens, although not as much as I would like. The P25 audio is an improvement over my BCD396T. (I do wish, though, they provided some manual P25 decoding adjustment like the BCD396T. But I guess they believe their algorithms are so good they don't need it.)

Hope this helps.

Date: 2008-02-09 02:37:52 UTC
From: Jay
Topic: 27735 Message: 27739

Hi John,

I had a PSR-500 on pre-order as soon as it was announced, and was one
of the first to receive it. After owning it for about a week, I ended
up exchanging the PSR-500 for another BCD396T.
I did not like the way that the unit is programmed (although I did see
their version of "dynamic memory" to be a step in the right
direction), and am just use to the ease of the menu-driven Uniden.
The Uniden seems to be much more "solidly" built as well, both with
the unit itself as well as the belt-clip assembly.
I did however appreciate the overall "more sensitive" nature of the
PSR and the NAC ability.
This of course is just my greasy little opinion, as there are plenty
of folks out there that love their PSRs. As always, your mileage may
vary.

FYI, they had two major incidents at once. The Spring Valley and 75 was a foot chase when a female officer pulled over a stolen vehicle. While they were in the middle of that, a car flipped on the 75 service road near Campbell. PD was there first and said they thought it was fatal. FD ended up requesting a full rescue response which included Rescue 4. That was probably where they needed the camera. I went to sleep before either incident concluded.

Thanks to all that replied, both individually and the group!

A couple of things that I thought were intriguing about the PSR's are the Virtual Scanners, and Skywarn alerts.
I don't think the Uniden's do that do they? VS would allow me to set up multi scanners before hitting the road on the Wing each summer, and since the radio's have both Analog and Digital, I wouldn't have to be concerned about missing stuff...(Keeping up with weather's pretty important on 2 Wheels!)

From: Cody Sheppard
Topic: 27664 Message: 27747

theres a joystick in the police car that the officer uses to move the camera around and look down dark alleys and behind building in inudstrial areas it can also be useful if they were looking for lost children in a field or a suspect that was bedded down in a field although i dont know how many large open fields there are in plano anymore....there was some talk at one time about the misuse of the cameras, people were under the impression that the officers could see inside there house but this is not true

From: Ed C.
Topic: 27675 Message: 27748

Stok antenna is fair to hald decent on VHF hi. I use the RS 800Mhz ducky for the most part while out and about. In the Apt. I use a 1/4 wave cut for 150Mhz (NMO on a mag mount). Results are not to shabby! Beware of the intermod monstoer though since the front end is wide open. The attenuator feature does help a bit when faced with overload. This morning was interesting.... During the VHF band opening, I logged a bunch of P25 comms from DPS repeaters I have not heard before. (Cant wait for another good one to go out park on a high spot and go "fishing").

Blaine Brooks <blaine.brooks@...> wrote:
How is reception in the milair band 225-400 for
these scanners?

How about 138-144 , 148-150.8 AM?

Low band VHF? 30-50?

Compared to a PRO-2006, PRO-43, BC780,
BC396/996 does it hold it's weight in these
bands?

How are the stock antennas for both of the radios
(the PSR-500 & 600)?

They are now on a high split UHF LTR Trunked system. And you are in luck, the PRO-528 will track it if you actually live close to Burleson! Go to the following web site for the particulars: http://www.radioreference.com/apps/db/?sid=5245

What did Burleson change to? They used to be on the 453.xxx band but
they no longer are there. What did they go too? I got a PRO528 model
to catch em with. And that would be the PD,FD, and city services
channels/freqs. Thanks.

Every scanner can be programmed differently. Unless you backed up the channels (using WIN97), you'll need to reprogram the scanner (or have it reprogrammed) from scratch.

If reprogramming from scratch (even if you are going to have someone do it for you), you should start by identifying what you want to hear from the database at:

27754. Re: [dfwscan] Any hands on experience with GRE PSR-500?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-09 18:22:42 UTC
From: Paul Opitz
Topic: 27735 Message: 27754

Instead of Virtual Scanners the Uniden models make all channels available all the time. Additionally, on the BCD996T and BCT15, you can use startup keys to quickly lock and unlock systems (think of it as lockout macros). You can create 10 different startup key setups. I use this feature to switch between my GPS-enabled systems for mobile use and my "static location" systems for fixed-base use, but it could also be used to quickly select alternate sets of systems based on region.

Unless I missed something, the Skywarn feature does not provide alerts. It just lets you quickly select your local Skywarn frequencies (which you do still have to program in yourself). You can do the same thing on the Unidens by creating a system named "Skywarn" and assigning it to its own quick key.

Not knocking GRE's implementation, just pointing out analogous features in the Unidens.

Thanks to all that replied, both individually and the group!

A couple of things that I thought were intriguing about the PSR's are the Virtual Scanners, and Skywarn alerts.
I don't think the Uniden's do that do they? VS would allow me to set up multi scanners before hitting the road on the Wing each summer, and since the radio's have both Analog and Digital, I wouldn't have to be concerned about missing stuff...(Keeping up with weather's pretty important on 2 Wheels!)

27755. Re: [dfwscan] CareFlite on Standby

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-09 18:50:04 UTC
From: Ryan Chalk
Topic: 27745 Message: 27755

When CareFlite is put on standby most of the time the crew stays in quarters. The pilot does a weather check and they look on a map to get an idea of where they are going. Being put on standby means the closest helicopter is being dedicated to a scene. The only way the crew gets into the helicopter is if they are more than a certain mileage away which i think is 30 miles, im not for certain, then they will fire up the helicopter and get airborne and head in the direction of the scene. From time of dispatch to time of being in the air is only a few minutes.

ldlorance <ldlorance@...> wrote: I hear all the time, to place "CareFlite on Standby". What does that
mean? Do the pilot and Flight PM go the aircraft and warm up the
aircraft or do they simply wait in their quarters until the receive the
call?

27757. Re: [dfwscan] Any hands on experience with GRE PSR-500?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-09 21:04:10 UTC
From: Mark Colborn
Topic: 27735 Message: 27757

John,

Have owned a PSR-500 since the first day it was released. Very pleased with it. I like the crisp clear sound quality of the unit and the LED light at the top. You can assign a color to an object and it helps identify who's talking. The sensitivity is excellent, but if you get near a Nextel tower, forget about hearing anything but rushing water noise. Its also much more susceptable to the clicking noises produced by AT&T 800MHz cell phones than any of the other models I have. I like the Wildcard feature for individual systems. Kind of like Search and Scan on Uniden models, or Open and Closed mode on PRO-96 and PRO-97 models.

It did not perform well on the Colorado DTRS while in Colorado on X-mas vacation. Even though I had all the nearby control channels programmed into a system, it would consistently miss the first and second transmissions of a conversation (sitting next to a PRO-96). Compared to the PRO-96 and Uniden BCD996T, it literally performed terribly. I initially had all 1458 talkgroups for the state programmed into one system. The problem is that only 32 control channels entries are allowed for each system. With wide area systems like the DTRS, 32 control channels are not enough. I pared down the list of talkgroups to the area I was in and pared down the number of control channels and it seemed to work better, but still missed a fair amount of traffic. I tried the multi-site STAT, ROAM and OFF settings, and it didn't seem to have an effect any way it was set. It is my belief that GRE still has some work to do to tweek the performance on pure P25 ASTRO systems.

In the DFW area on the systems we have around here, it performs splendidly. It scans much faster than the Uniden dynamic memory system scanners and it has enough memory to input all the systems and conventional channels in our area and most if not all known LTR systems. The main limitation is only 20 scan lists. You have to assign all talkgroups, conventional and wildcard objects to a scan list. Depending on what you want to listen to, or not listen to, this can be a limiting factor. This is where the Uniden dynamic memory models outshine the GRE by allowing locking or unlocking individual groups inside systems. But the tradeoff in my opinion is with the slow scan rate with the Uniden models. You simply miss more when your scanning.

Overall, the PSR-500 is my new, take everywhere scanner, replacing my PRO-96.

Mark

FYI, they had two major incidents at once. The Spring Valley and 75 was a foot chase when a female officer pulled over a stolen vehicle. While they were in the middle of that, a car flipped on the 75 service road near Campbell. PD was there first and said they thought it was fatal. FD ended up requesting a full rescue response which included Rescue 4. That was probably where they needed the camera. I went to sleep before either incident concluded.

27763. Use in public

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-10 04:58:36 UTC
From: prycemarshall
Topic: 27763 Message: 27763

I'm sure the majority of members in this group are also member on multiple other scanner related groups; I hope you agree with me, this one seems to be best source of information about the hobby I've found.

As an update to a previous question of mine: I love my PSR-500, it's amazing how much I was missing here in Bryan/College Station that was P-25 only.

I have another opinion/experience question for the group. As always, I appreciate any input offered.

I am curious to know how law enforcement authorities feel about citizens with scanners in public. I would like to monitor at larger events; I would prefer to keep my scanner concealed, and listen through headphones. I `d like to think that I am an otherwise unsuspicious looking person, and if I am not interfering with anything I would think this shouldn't be an issue with law enforcement.

I've mentioned to the group in the past that I have experience as a volunteer fire fighter, so I understand the annoyance/danger of "siren chasers". I also understand that there is an increasing occurrence of officer impersonation in D/FW, which I have not heard of being a problem in my area.

Please let me know of any previous experience on the matter you all may have encountered.

Thanks,

Pryce Marshall
Fightin' Texas Aggie c/o 2006

From what I've heard on the scanner, FLIR cameras are most often used at MVA scenes to look for people who have been ejected and may be unconscious or dead. In Plano, that would be mostly along Central, GBT, or DNT where people may have been thrown into ditches and are not really close to where their vehicles ended up. FLIR is also used to try to track people who have fled from police and run into brushy or wooded areas. (Probably K9 is more effective for that.) Also, FLIR is an indispensable helicopter tool.

Also, note what Terry said on a different topic.....

>Guy was SB on loop 820 when he left the roadway and landed on the bank of

The BCT15 is capable of reflashing. Until at least one Motorola Analog system somewhere rebands and uses the new control channel format, no manufacturer can guarantee that their scanner will work on such systems after rebanding. But, it is likely that rebanding updates will be possible.

Mike,
It's on the rebanding-supported list. As soon as there are some rebanded Motorola systems out there for Uniden to test their plans for handling the new systems, then a firmware update for the BCT-15, as well as the other supported scanners (includes the 396, 246, 996, 330, 296, & 796) will be be developed & released after testing.

I've also considered replacing my 250D, or 780, with the BCT15, since neither of those are rebanding supported.

Yep, except despite what some people think it will not see through grass or water. In this case the guy was under water and a diver found him. They did however bring in the helo with the FLIR and if he had been on land they most likely would have found him. DPS Air-1 has been doing some training with the FLIR and K-9 out in the Forney area lately. It's usually around midnight and they use National Mutual Aid 1 (simplex) for comms.

27771. New communicatoins system on council agenda in Cleburne

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-12 00:25:41 UTC
From: Chris Easley
Topic: 27771 Message: 27771

Thought this might be of interest to the group.

http://www.cleburnetimesreview.com/local/local_story_042165911.html
<http://www.cleburnetimesreview.com/local/local_story_042165911.html>

But I'm a little confused though. I know that a new communications system is being
built for Johnson County. And I had thought that Cleburne PD/FD was at some time
going to get on that system. I could be wrong though. It has been quite some time back
when I read the original article.

Speaking of the new system for Johnson County, are their any updates as to it's status.
I'm still hearing Johnson County Fire on 46.100 and SO on 158.745.
So apparently the system still isn't quite ready.

Chris Easley

Chris,

This article is yet another example of poor journalism, which is slowly putting the outdated paper media out of business. The title leads the reader to believe the city is getting a new communications system, however, the explination sounds more like they are getting a new computer aided dispatch and report system. Totally different systems of course, and I doubt the hack reporter who did the story even has a clue.

Mark

Hello all,

Having just purchased a PRO-528 I'm seriously considering getting the ARC433 software.

Could someone share a "master file" with all the talk groups, trunks and frequencies that could be imported into the scanner?

27777. 5.8973 Lockheed Flight Test

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-14 01:13:05 UTC
From: commscan
Topic: 27777 Message: 27777

For Those with HF (USB/LSB) capabilities, Lockheed is doing a flight test with one of their aircraft on 5.8973 once again. Unfortunately, due to a downed HF antenna, I can't listen in at this time.

This is just one of the Lockheed Fort Worth common HF frequencies they use when testing on HF.

27778. Any I-Call usage in the area?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-15 02:12:32 UTC
From: skeeter_1
Topic: 27778 Message: 27778

Are there any systems in the N.E. Dallas area that uses I-Calls? I've recently picked up a PSR-500 and have it set up to receive I-Calls using the instructions found in the manual. From what I can tell, I've not noticed that I have received any activity. The systems that I consistently scan are Plano, Richardson, Garland, Mesquite, and Carrollton (on a good reception day).

Thanks.

From the RadioReference.com wiki:

Uniden's name for an individual call between two radios or between a
radio and a console operator on a Motorola or EDACS trunked radio system.

Also called "Private Call".

Probably won't hear anything police-wise -- any sensitive information is
usually passed via cell phone, as they know the media monitors the
normal radio activity. If you hear anything it would probably be
supervisor-to-supervisor conversations for lesser departments such as
public works, animal control, etc...

Topic: 27735 Message: 27782

Well as it turns out, I went off in the Uniden direction.. The GPS features of the 996T grabbed my attention as well as the Remote Head. I think that will work better on the Wing..

Anyone care to share their DFW ARC996 files with me to save a bit of time?

I can trade DFW files for the BC246T,(ARC), or Pro92/2067, (Scanpro).

Thanks!
John

You can assign a color to an object and it helps identify who's talking. The sensitivity is excellent, but if you get near a Nextel tower, forget about hearing anything but rushing water noise. Its also much more susceptable to the clicking noises produced by AT&T 800MHz cell phones than any of the other models I have. I like the Wildcard feature for individual systems. Kind of like Search and Scan on Uniden models, or Open and Closed mode on PRO-96 and PRO-97 models.
>
> It did not perform well on the Colorado DTRS while in Colorado on X-mas vacation. Even though I had all the nearby control channels programmed into a system, it would consistently miss the first and second transmissions of a conversation (sitting next to a PRO-96). Compared to the PRO-96 and Uniden BCD996T, it literally performed terribly. I initially had all 1458 talkgroups for the state programmed into one system. The problem is that only 32 control channels entries are allowed for each system. With wide area systems like the DTRS, 32 control channels are not enough. I pared down the list of talkgroups to the area I was in and pared down the number of control channels and it seemed to work better, but still missed a fair amount of traffic. I tried the multi-site STAT, ROAM and OFF settings, and it didn't seem to have an effect any way it was set. It is my belief that GRE still has some work to do to tweek the performance on pure P25 ASTRO systems.
>
> In the DFW area on the systems we have around here, it performs splendidly. It scans much faster than the Uniden dynamic memory system scanners and it has enough memory to input all the systems and

conventional channels in our area and most if not all known LTR systems. The main limitation is only 20 scan lists. You have to assign all talkgroups, conventional and wildcard objects to a scan list. Depending on what you want to listen to, or not listen to, this can be a limiting factor. This is where the Uniden dynamic memory models outshine the GRE by allowing locking or unlocking individual groups inside systems. But the tradeoff in my opinion is with the slow scan rate with the Uniden models. You simply miss more when your scanning.

Its a PRO-97 on steroids. They added the 700MHz band which is a gimic because without a digital board it will be useless. Radio Shack is now selling the exact same model with the Rat Shack name (PRO-164) and it is currently on sale (at least on their web site for two more days) for $179.99. $40 off the introductory retail price. It doesn't have the snazzy blue buttons on the front like the PSR-300, but its the same radio. Keep in mind that the PSR should come with a programming cable (but make sure first) and if you get the PRO-164 you will definatley have to buy it. If you are looking for a handheld conventional scanner (without digital capability), that can be reflashed when/if re-banding occurs, don't belive you could go wrong.

I've put an extensive DFW setup in UASD format (you could load it using the free UASD, then read it back out using ARC if you prefer that software) in the files section of this group (under "BCD996T UASD"). It includes GPS setup for most of the systems in the area. See the readme file in that folder for a breakdown of what is there. Probably some things need to be updated a little, but it is a heck of a lot better than starting from scratch (especially with the GPS stuff).

There is also an ARC folder in that directory, but it is for the 396 so likely does not include the GPS stuff.

Paul

To add to Terry's comments, Denco uses it. But as
Bill stated, not really important material. The times I've
listened (which is rare - since my PS monitoring is
done with the PRO-96 and not the BC780) most calls
have been highway dept or public works.

Subject: [dfwscan] 5.8973 Lockheed Flight Test

For Those with HF (USB/LSB) capabilities, Lockheed is doing a flight test with one of their aircraft on 5.8973 once again. Unfortunately, due to a downed HF antenna, I can't listen in at this time.

This is just one of the Lockheed Fort Worth common HF frequencies they use when testing on HF.

Gregg,

My 396 and 996 files are on my website at

http://www.bensware.com/scandfw/BC996TUSDFiles/

You can open them with the Uniden 246 software. The thing you may have to do is reassign quickkeys that are 0..9 instead of the 0.99 that the 396 and 996 allow. Otherwise, it might save you quite a bit of typing.

Happy Scanning,

Ben Saladino, KC5IRJ

27793. Northwest students qualify for ham radio licenses

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-17 17:07:21 UTC
From: cltx11
Topic: 27793 Message: 27793

Direct link following article (from Star-Telegram)

FORT WORTH -- Wayne Day sparked the interest of his Northwest High School engineering students at the beginning of the school year: He gave them a way out of taking a semester exam.

They would be exempt from the test if they became licensed amateur radio operators, which would qualify them to operate a private radio, Day said.

His hidden agenda: Getting that license would require the students to put their knowledge to practical use.

"It opens that one more door for them," he said. "You've shown you have some technical experience."

Day, who is teaching the class in its first year at Northwest, has tried to show the students what their future might hold if they stick with engineering.

"Anything we can do to expose the kids to another engineering aspect is a good thing," he said.

'People from all over'

A qualified volunteer must administer the Federal Communications Commission test, so Day contacted Alliance Amateur Radio Club President Barney Boone. Boone was thrilled to be proctor for Day's students.

"It's what we're trying to do, get younger kids involved," Boone said.

Being a licensed radio operator is "a big social thing," Day said, which was enough to convince Northwest senior Freddie Main III -- and 31 of his classmates -- to take the test in January.

"I thought it would be interesting to talk to people from all over," Main said.

The engineering students studied for the test for two weeks. During the exam, they spent about 45 minutes answering questions about FCC guidelines, frequencies and wavelengths.

Twenty-seven of Day's students are now licensed amateur radio operators -- or hams -- joining the likes of former Sen. Barry Goldwater and musician Joe Walsh.

Future opportunities

Opportunities like the amateur radio test are the reason Main signed up for the fledgling class last summer. Main has wanted to be an engineer for years.

"As soon as I saw it, I hopped on the boat," he said. "I just wanted to get a taste of it before college."

Day is satisfied to think that his class has helped at least one student with an engineering future.

"It definitely solidified that decision," Main said.

They are now on a high split UHF LTR Trunked system. And you are in luck, the PRO-528 will track it if you actually live close to Burleson! Go to the following web site for the particulars: http://www.radioreference.com/apps/db/?sid=5245

Date: 2008-02-18 05:49:31 UTC
From: Matthew
Topic: 27795 Message: 27795

I have been hearing out here in West Plano this automated message on 466.7500 DCS627 being transmitted all evening every minute or so.

"Tamper Alarm. May I have your attention please. Emergency Call Box 212 Activated, Central Stairwell, Level 6."

I am not sure who this is but doing a FCC lookup comes up with no results either. I am wondering if anyone else in the area is hearing this? I might have to go for a drive tonight and see if I can scope out the area it's coming from.

Ahh ha! I figured out where this signal was coming from. I just took a drive and it's coming from Presbyterian Hosp Of Plano but not from the actual building itself but the parking garage! The 6th floor is the top level of the garage and there is no roof above it so that is why the signal is getting out pretty far. There are a couple call boxes on each parking level but this one was easy to find as it had a flashing blue light on it instead of regular non flashing blue light.

Blue light? I'm surprised the announcement wasn't "Attention, K-Mart shoppers..."

The fact that the announcement went on so long means something is broken or they ignore the fact that someone may have tried to use the phone and was unable. Kinda like calling 911 and getting a recording.

The frequency they are using for those call box alarms is licensed to them as a trunk frequency and is used as part of their 4 frequency LTR trunk. As of 8am this morning it was still going so I bet either that they don't have a radio set up to monitor that frequency and tone or they just don't know that the tamper alarm is going off because it's on the roof of the parking garage and no one goes up there or they are just lazy and don't give a damn. LOL. :)

Before the LTR system was in place, didn't PHOP operate conventionally
on those frequencies? Maybe the callbox has an old radio installed.

Thats probably the problem, a NON LTR radio in the callbox that cant access the system so they have no idea that its been triggered. I guess security has not been up to the top of the parling garage either since its blue light is flashing as well.

Hummmm. Looks kinda like Texas DPS operations. The NFM is designed for
the 12.5Khz applications. It is too bad that we cannot get a GOOD NFM
scanner. I get intermod on all of the terse freqs. But, then again, I
have the cheap Unidens. Not complaining, just hoping that Uniden builds
a digital scanner with narrower front end filtering.

Be safe, y'all.

Here's an update to the original article.
http://www.aetc.af.mil/library/factsheets/factsheet.asp?id=11456

Air Force releases Alliance assessment

FORT WORTH -- An environmental assessment and documents related to the proposed training of foreign fighter pilots at Alliance Airport are available for inspection online at www.aetc.af.mil, the Air Force announced in a news release. Click on the library link and then go to "UAE IFF Environmental Assessment" in the right side of the navigation column. Air Force officials are trying to decide whether to train the foreign pilots at Alliance, and the recently completed environmental study is a part of the decision, Air Force spokesman Mike Briggs said. The assessment found no significant impact, and the documents contain details about the finding, the release states. Some residents of far north Fort Worth are protesting the proposal because of noise and safety concerns in their neighborhoods. A date for the training to begin, if the Air Force decides to go forward with the plan, has not been set.

Hi Group,

I don't know about the Dallas side of town, but on the Fort Worth side, Navy Fort Worth's JRB as well as The T (on Fort Worth's LG System 4309) use I-CALL. Even Fort Worth's PS System 3632 has an I-CALL ID I've never quiet figured out yet. It's a data channel and I have no clue what it is used for.

I know prior to even having I-CALL capable scanners, somewhere around 1997-98, Denton County SO used "Private Calls" which I believe were the same thing more or less. When a unit would tell another to "go private" they would usually pass them a series of numbers (I believe four digits) and the only way to hear them on a BC235XLT (the first TrunkTracker scanner) was to get out of Trunk Mode and scan conventionally.

I always turn on the I-CALL feature as I create a System/Bank just in case there is any use...

Subject: [dfwscan] Any I-Call usage in the area?

Are there any systems in the N.E. Dallas area that uses I-Calls? I've recently picked up a PSR-500 and have it set up to receive I-Calls using the instructions found in the manual. From what I can tell, I've not noticed that I have received any activity. The systems that I consistently scan are Plano, Richardson, Garland, Mesquite, and Carrollton (on a good reception day).

Thanks.

Topic: 27778 Message: 27812

"Private Call" is Motorola terminology. I believe I-Call is common MACom terminology, though it's been a while since I last used an EDACS/Provoice radio.

In either case, the originating user must have the radio ID preprogrammed, or, in the case of a full-keypad radio, can enter the individual ID. In Motorola land, the ID is the radio's individual ID converted to decimal, plus 700000 (IID 006C would be decimal 700108, if memory serves). In MACOM world, the ID is simply the Radio ID (RID), which is already decimal.

The BC235 wouldn't hear private calls as it did not understand the OSW (outbound signalling word) for such traffic.

Such traffic was routine in the earlier days along with call alert and telephone interconnect, when cell phones and Nextels weren't ubiquitous (recall that Motorola's SmartNet/Privacy Plus trunking has been around since the early 80s, and EDACS isn't much younger). Nowadays, everyone has a cell phone - which is usually easier to use and doesn't require memorizing everyone's radio ID (which, of course, can change for departments that use shift radios rather than issued radios).

JRB may not issue phones to everyone - thus the private calls. The T, ditto. You won't hear a ton of public safety traffic using private calls these days... either the radios aren't configured for it, or the operator isn't configured for it. PCs/CAs/phone interconnects can also be disabled at the controller level, which may be the case for some local systems.

It isn't exactly in the area but there are lots of I-call phone patches
on the Sheppard AFB system. I don't recall hearing any radio to radio
I-calls.

From: commscan
Topic: 27814 Message: 27814

Hi Group,

In case anyone hasn't heard yet, a Dallas PD motorcycle officer wrecked out and was killed a little while ago near Reunion Arena. He was part of the Clinton motorcade.

The motorcade is now in Ft. Worth and ops are on Central Talk 1/3408 at this time (11 AM)

Brian

To my fellow fire apparatus buffs on the list, here are a few (hundred) photos I took yesterday and today with a tour group hosted by the http://www.texasfiremuseum.org/ (in south Dallas, definitely worth a visit, but probably not this weekend with the convention going on), they're hosting the 2008 SPAAMFAA National Winter Convention.

Dallas Fire Rescue Mainteance, Supply, and Training
http://bensware.com/firetrucks/DFRTour/

Fort Worth Station 2, D/FW Airport Training area, Stewart & Stevenson (service center), and the Texas Fire Museum.
http://www.bensware.com/firetrucks/SPAAMFAAW08/

And to make sure I relate this to scanning, I did ask to see the watch room at FWFD Station 2, and they gave me a dispatch ticket. It's pretty much all the info you hear digi-voiced on their Locution CAD system, plus the time and incident number, units responding.
Here's a photo of the touch screen with 4 very large easy to hit buttons to switch between day and night modes for the station speakers and lights, reset, local test, and emergency lights.

While on the subject of fire buffs Dallas will be commissioning their newest station, Station 40. This will be Feb 28th. Here's a bit of information on the station and mission. :

LOCATION: Dallas Fire-Rescue Station 40
2440 Kirnwood at Hampton Rd S (MAPSCO 63Z)

Dallas Fire and Rescue is pleased to announce the official commissioning of Dallas' newest fire station, Station 40. The building will currently house an engine crew and a peak demand rescue. The station, a huge four bay apparatus facility can accommodate an engine, ladder truck, rescue unit and a battalion chief's suburban. Station 40 will also be utilized as a satellite HAZMAT station for hazardous waste removal.

Dallas' second green fire house, similar to Fire Station 38, Station 40 has energy saving features for example: compact fluorescent bulbs, insulated windows and an efficient heating and cooling system. In addition to being "Green", the City of Dallas Public Art Program had also commissioned local artist David Hickman. He created, Got You Covered, an artwork of stylized silhouette firefighters protecting the City of Dallas working together with fire hoses. The metal artwork constructed with powdered coated steel and aluminum, is positioned on a massive 8 ft by 26 ft iron security gate to the main parking lot.

Tune your scanners to 95.9 FM and see if you hear anything resembling hispanic radio - as opposed to country radio. There are 2 country stations on that frequency that you can probably pick up, but there's an alleged "pirate" on that freq, and I haven't been able to get confirmation yet. If you DO hear something along the lines of "95.9 The Taco" and wouldn't mind emailing me back offlist giving me a major street intersection near you, I'd be much obliged.

Thanks!

The Airbus A380 visit was supposed to happen last November, but was canceled. Word was that it was supposed to happen early 2008 instead.

Anybody heard anything on this?

27822. Modeling Emergency Equipment

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-02-27 14:22:45 UTC
From: Lee Shell
Topic: 27822 Message: 27822

Veering off-topic (knowing that several list members have an interest in emergency equipment), the subject of modeling emergency equipment came up on my Corel Draw list. (I use Corel Draw heavily at work. It is similar to Adobe Illustrator and other page layout graphic programs.) One of the list members offered this sample of his drawings

http://3dsplash.com/Bills%20Page/P95.png

He then turns the 2D drawings into 3D and then places them in a scene, I believe.

I
think it is just a hobby for him, but another list member designs the decals to be used on that type of equipment, so the drawings were of great interest to her.

I think I can dig up one or two more links for
anyone who contacts me off-list.

I'd recommend monitoring 164.650 USSS Tango
for the Dallas local field office activity. But no
guarantees you'll hear anything. I didn't hear a
peep the other night when Obama was in
Duncanville. I've heard from some other folks
of sporadic radio traffic the last couple weeks,
but not as much as expected. Brief motorcade
updates, but that's been about it. USSS is
certainly not the same (monitoring wise) as
it was in the past (the good 'ole days).
There have been a few POTUS visits to the
Dallas area where there has been no radio
traffic heard at all on the USSS channels.

From my experience as a monitor and
former media vulture, you'll certainly hear
more details of motorcade and command
ops if you can find the tact channels used
by your local PD. Generally, MUCH more
interesting. Unless of course, they are
encrypted too....:)

Code names:

Renegade - Obama
Evergreen - Clinton
? - McCain

Obama requested USSS protection earlier
on in the campaign because of some threats.
Not sure about McCain. It used to be USSS
offered protection (for all) the second they
announced they were running, but times
(and rules) have changed over the years.
I don't quite agree with that, but I'm not the
Treasury Dept. director....:) Probably due to
a reduction in manpower in the federal agencies
offering protection, and budgetary cutbacks.

Sort of like big business downsizing....

Topic: 27839 Message: 27839

I have Arlington Fire Department, and EMS, as well as Fort Worth Fire and EMS programmed into my Rat Shack Pro 2067, Via Win92, I have confirmed all my ID's for the two systems, in the bank I have them in, all ID's match those listed in radioreference, however, when I enter Arlington or fort worth, I only pick up the ARL EMS and the FTW MedStar Main dispatch ID's. No Fireground, no Fire Dispatch, for either City, nor do I pick up any of the Fire Or EMS from the other cities in the FTW system, NRH, Haltom City, Kennedale, so on so forth.

Can anyone possibly tell my what my problem is? I've programmed it just like every other system i've ever programmed, without problem, when the EMS channels come in, they come in clear as day, and I know the system frequencies are in the banks right as well . .

Thanks for the Help...

Tim

27840. Great Wolf Lodge

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-03 18:55:44 UTC
From: Ben Saladino(YG)
Topic: 27840 Message: 27840

Howdy Folks,

I did a little FCC research and found a few frequencies for Great Wolf Lodge

http://www.greatwolflodge.com/

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2944937&__newWi
ndow=false

http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applMain.jsp?applID=414125
9&__newWindow=false

It appears at least a few of the frequencies are on an LTR system, with most of the traffic I've heard on 464.4625, 461.6125, and 463.8375. Some of the others I'm not sure about. The water park ops are pretty constant with stuff like "Alberta clear, Coyote Clear". I'm guessing those are the two big slides, and the life guards at the bottom are giving the ones at top the ok to send the next person down. There's lot of maintenance and general hotel ops type chatter as well. I can't receive the system in Bedford. I think it's a 25Watt system.

Here's a Uniden 396 file I setup to scout things out. It pretty boring stuff, but then again, if something happened out there, or you're spending time there, it might be interesting.

Does anyone know how Plano has set up their numbering system? I got a part time job doing security patrol at Deerfield, and tried listening to Plano the other night. What is the number before the beat assignment mean, ie; 5D3. I know D3 is the beat, but what is the 5 for?

Anyone know what is going on with an incident @ N.W. Highway and W. Lawther? I heard Careflite 1 trying to contact Batt4 and USAR 15 check on scene. I didn't hear the intial call and was just wondering what this incident was. Looking at the DFR Website it shows Unconcious Person. 3Engines, 3trucks, 3rescues, 4BC's, 784, and 2USARS. Seems like a lot of equipment for a medical emergency call.

TIA,

Doug

From WFAA, Ch 8's web page:
http://www.wfaa.com/sharedcontent/dws/wfaa/latestnews/stories/wfaa080304_wz_rescue.227a4bf8.html

I got caught up with late orders at work, & came in on the middle of it as well. I did hear traffic on DFR's channel about getting more pulleys & rope for the rescue attempt. Apparently, the victim fell down between the bridges to the creek. While I was driving home, Careflite was still circling, pending the LZ being secured, & the extrication from the ravine completed.

From past posts, & also from listening, it's apparent that the new CAD system does not always clear equipment from the online incident page, especially if there was a swap made, or the unit cleared before the event was fully closed out. If you check, you'll occasionally see the same unit "assigned" to two widely separately runs. For instance, an engine company still linked to an earlier structure fire, but also a more recently dispatched EMS or MVA call.

I believe in the case of USAR just like HazMat the USAR vehicle is accompanied by a rescue, engine and truck. The original call would get a engine and rescue and most of that other stuff is USAR. I know if USAR is deployed at Tx Task Force 2 a Bat chief goes ahead as a scout and I believe another runs with the convoy. That might explain Bat 6 response.

I missed the original call myself but that was the most screwed-up mess I've heard in getting CareFlite on the ground. I think they orbited the scene for 20 minutes waiting for an LZ. It sounded like the guys doing the rescue were doing fine but they waited on the Bat Chief to set an LZ. It sounded like it was his first! Kicking out and engine or two for the LZ would have made more sense.

Terry

I think they use Nextel in Dallas County or maybe still on low band.
In Fort Worth they use 151.0025
Paker & Palo Pinto Co on 151.0925 and truck to truck simplex on 151.055
The rest can be found here http://www.radioreference.com/apps/db/?aid=790

I would tend to agree with Tom in that
probably the Denton and Collin units use
Nextel (or some form) as well. Since they
left low band & the TXU system many
moons ago, I don't have a clue where
they are frequency-wise.

I don't worry TOO much though, as your local
public safety frequencies should be hoppin' if
there are any icy areas. Texans freak when
they see a snowflake. You can darn sure bet
if they come across patches of ice, the first
thing they'll do is call the police after they
smash into the median wall.....;-)

27852. PSR 500

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-08 14:09:21 UTC
From: Blaine Brooks
Topic: 27852 Message: 27852

Hi all -

I asked this before but never received
a response from the users that have it.

I am seriously considering purchasing a
PSR-500 and am wondering how it
performs with milair (vhf & uhf) while
mobile, in house or building, and while
connected to an outside antenna. While
it would probably not be my PRIMARY
for milair, it would more than likely be a
strong secondary, especially portable at
airshows and such. So....how does it
perform?

Also, as many of you are well aware, I'm a
big federal monitor. Up 'til now, I have been
extremely pleased with the PRO-96 and it's
ability to decode local P-25 unencrypted
VHF & UHF. How does the PSR-500
compare? And how does it perform onm
the federal P25 with the proper NAC codes
programmed?

Thirdly, can someone who uses this radio
please post a list of the confirmed NAC codes
for our area. The more the merrier! (fed
included)

TIA.

From: hiegtx
Topic: 27852 Message: 27853

Blaine,

I'm not nearly as heavy into milair as I was in the past, so my PSR500 has not really gotten a good workout in that band yet. I'll probably load up a selection of frequencies to try out next time I visit my friends at their weekend 'retreat' out near Strawn, away from all the intermod of the Metro area (and nearer the Brownwood MOA). However, based on comments I've read in RadioReference, the 500 apparently does very well. It does have a very "hot" receiver, and can desense from signal overload, so don't overdrive it with too much antenna.

The PSR500 does very well decoding P25 conventional transmissions with the proper NAC codes, whether it's one of the Feds operating unencrypted, or Texas DPS. NAC search is also quick, for identifying P25's whose codes have not been confirmed or posted yet. I've saved a couple in my programming file, but have not started building a list. Too many other demands on my time, especially at work. More of the NAC codes are showing up in the RadioReference database, including TX DPS & some of the N. Texas counties & cities that are using conventional P25.

One thing I have noticed with at least my 500: On the Plano TRS, it hangs up on a talkgroup at times, like an open mic, when the transmission ends. At first, it primarily seemed to be one specific TGID, which I locked out, but the problem continued with a different ID. After much experimentation, tweaking the various settings, turning AGC & Supertrack on/off, etc, etc, the only common factor is that the problem only occurred when the TGID appeared on VC 866.6500. Squelch, attenuation, antenna used (R/S 800, stock, RH771), all had no effect. So, it's got to be a birdie frequency. (That was suspected anyway, since I did not see this behavior on my 396 or 996) That should take care of itself whenever the Plano system is rebanded (and apparently will eventually go P25 as well).

From: wayne gresser
Topic: 27852 Message: 27854

I cannot comment on milair (I do not monitor that band) but the PSR-500 does a great job on VHF and UHF. I purchased the radio primarily for the NAC functionality and have not been disappointed. As others have reported (see threads on PSR-500 in RR) the radio is subject to overload in high rf conditions. For instance, if I use mine at my monitoring post next to the computer, printer and other radios, the PSR-500 becomes rather deaf. Same thing on an outside antenna (I live in Houston). But, get it a few feet away from other electrical devices and it works very well. I took mine out to the Big Bend area and with a mag antenna was picking up signals loud and clear. It definitely shines in remote areas where it's high sensitivity can work at full potential. The NAC decoding has worked flawlessly for me. I have several search objects set up (federal VHF and UHF) as well as sweeper objects (close call mode) and again no complaints. If you like to scan Texas DPS with all their new splinter frequencies, this radio decodes them as per NAC programmed with no adjacent frequency interference.

I was in Frisco this past week for a conference and was able to monitor a little. I was searching the federal VHF and UHF bands and here is what I found (I made notes of P-25 use only);
415.875, NAC 293. 165.950, NAC 001. 162.850, NAC 033. 170.000, NAC 293. 163.700, NAC 031, 165.375, NAC 001. 164.650, NAC 001. 169.1625, NAC 001, 172.900, NAC 001. 163.2125, NAC 100. 163.300, NAC 001. 163.6375, NAC 100. Most of these were encrypted so not sure of the agency.

I don't think you would be disappointed with the purchase of this radio.

27855. Re: (dfwscan): PSR 500

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-08 23:34:47 UTC
From: Mark Colborn
Topic: 27855 Message: 27855

Blaine,

I've had one since the day they were released and shipped. I've been very happy with the unit, and it is now my go everywhere scanner. I haven't listened to hardly any MilAir so can't give you a definitive word on that part, but it seems to do well on airband AM, and VHF and UHF conventional. I do enjoy the NAC decoding capability. If you set the channel to code search, it will tell you immediately what type of tone is being used and what the number is. If you enter a NAC tone on a channel, it works just like the CTCSS and DCS tones do. I took it to Colorado over Christmas and it performed very poorly (missed lots of initial transmissions on a talkgroup) on the statewide digital trunked radio system, a pure ASTRO P25 system. Couldn't hold a candle to the PRO-96. However, GRE has released another firmware upgrade, which according to initial reports, has improved its performance on these types of systems. Around our area, it performs very well on trunked systems. And I have every one for our area entered into mine. I'm up to about 1750 objects and its not full yet. But, if you are used to Uniden scanners and to breaking down your systems into subgroups, forget that concept. You enter in each conventional channel or talkgroup as an object affiliated with a system & assign it to a scan group. If you want to listen to all talkgroups in a system you have to create a Wildcard object for that system. You can't turn it on and off other than locking it out, then turning the unit off then back on. You are limited to only 20 scan lists. So what I did was combine several systems who are close into one scan list, like Grand Prairie and Mansfield for instance. Arlington has its own scan list, but since I don't get up to the northeast corridor often, I have Richardson, Garland, Plano, McKinney and Collin County all in one system to save scan lists for other items. The audio is crisp and clear like the PRO-96, and I really like the colored LED light at the top of the scanner. It helps in identifying who is talking on a scan list without having to glance at the screen; like red for fire, blue for police, yellow for EMS, green for Media and pink for wreckers! It has been mentioned that the unit is very sensitive. Forget about hearing much of anything around a NEXTEL tower. The audio on mine washes out. And you can't set it near computers. And if you have a 800MHz cell phone, you will hear the hamster claw sound coming out of the scanner's speaker each time the phone pings, or gets pinged, by a cell site. Guess that's handy if you want to know if someone is calling before the phone rings or if Jack Bower is looking for your GPS coordinates! But, the receive capability with the stock antenna is awesome. I can hear systems here at the crib that are deaf to all my other scanners including the PRO-96. The scan rate is remarkably fast and comparable to older GRE scanners "back in the day." With four 2500maH Energizer nickel metal hydride batteries it will run for about 8 to 10 hours.

Mark

Dallas police, firefighters frustrated with automated dispatch system

08:08 AM CDT on Sunday, March 9, 2008
By TANYA EISERER / The Dallas Morning News
teiserer@...

Dallas emergency workers say they're facing a new menace: their computers.

Many believe public safety is at risk because of numerous problems related to the installation of a sophisticated new emergency dispatch system. According to interviews and documents obtained by The Dallas Morning News:

☐ Firefighters have been sent to wrong addresses or dispatched to emergency scenes when other firefighters are closer.

☐ Emergency workers have been inadvertently notified that they don't have to go to an emergency call when help is needed.

☐ Police officers on patrol have received incorrect information on people's criminal records or outstanding arrest warrants.

☐ Correct information for police about whether a suspect is a wanted criminal sometimes arrives long after a person who was being questioned has been allowed to leave a scene.

"If someone hasn't died yet, then they will," said Jim Crump, a 24-year Dallas Fire-Rescue veteran. "It's a roulette wheel spinning. ... The people of Dallas have a right to know that their system is broke."

There are no known incidents of deaths or serious injuries related to the dispatch problems. But the nearly $6 million system that went online in August appears to be at the center of numerous difficulties.

Many of the new dispatch problems are related to the system's Achilles' heel: a patchwork software link between the city's older hardware, such as the computers in police cars, firetrucks and ambulances, to the newer dispatch system under City Hall.

Human error also may have increased as dispatchers, police and firefighters struggle with what they say is a cumbersome and often slow system.

City officials say they're working on fixes for many of the problems.

"We don't deny that there are issues, because there are," First Assistant City Manager Ryan Evans said. "But we are absolutely committed to addressing all of them."

Public safety concerns

Mr. Crump, the son of a retired Dallas firefighter and brother of a Dallas police officer, said he chose to talk publicly about the problems because of serious public safety concerns.

Documents show that firefighters have reported that the speakers at their stations ☐ which are supposed to let them know that they need to respond to an emergency ☐ sometimes do not work correctly with the new automated dispatch system.

Sometimes, the speakers at the wrong station go off, causing delayed responses to as many as 20 to 30 emergencies per day, according to fire department documents.

That's a major concern for firefighters such as Mr. Crump, who said what happened Feb. 25 at his station has become common: He says his station received two calls on the emergency-only red phone from someone at fire dispatch letting them know that they had been sent on emergency calls.

The phone calls were needed because the dispatch system had not notified firefighters of the emergencies through the fire station's loudspeakers. Precious minutes had been lost.

Neither call ended up being a serious problem, but Mr. Crump said it's the "what if" that scares him.

But Worris Levine, the city's director of communication and information services, said the dispatch system is not the source of that problem. He said the dispatch system is sending the information to the speaker system, but the speakers aren't activating. "We don't know what that is yet," he said.

He said he did not see it as a public safety concern because dispatchers can simply notify firefighters if they don't respond. "We're talking about seconds," he said.

Lingering problems

Although the city says it has teams of workers focused on the dispatch system, many of the problems have continued unabated since the city flipped the switch on the new computer-aided dispatch system at 4:15 a.m. Aug. 22.

The transition got off to a rough start, despite the statements in a City Hall news release soon after the rollout that there had been only a "few minor problems" that didn't affect public safety.

Some are seemingly mundane, with once-simple tasks on in-car computers now taking four or five steps to complete. Officers on patrol struggled to file reports, a problem that, early on, necessitated a massive effort to reprogram nearly every computer.

But writing reports on in-car computers remains "a very slow process," Officer David Baures wrote to police officials. "Is this going to be improved or are we stuck with this slow, inefficient 'new' computer?"

At various times, police have been reduced to writing reports by hand.

Other problems eat up untold man-hours, such as the frequent lag time between when a dispatcher assigns a police officer a call and when the information reaches in-car computers.

Finding out if someone is wanted by police, or driving a stolen car, has became tedious and time-consuming, whereas accessing such information had previously been nearly instantaneous.

Senior Cpl. Keith Huber, a member of the police special investigations unit, wrote to police officials in November that he had requested a records check through his in-car computer to see if a man had any outstanding arrest warrants. The computer initially said the man was not wanted. Minutes later, it notified him that the man actually had multiple outstanding warrants.

It was too late: Officers had let him go.

On Feb. 25, Senior Cpl. Christopher Wagner arrested a man after catching him with crack cocaine and a crack pipe. When he tried to check to see if the man had outstanding warrants, nothing came back telling him one way or another.

Once at the jail, he determined that the man was wanted for a parole violation for burglary.

"He's on parole until 2025," said Cpl. Wagner, who works on a crime response team in some of Dallas' toughest neighborhoods, including those in West Dallas.

"We were out there for 20 to 25 minutes talking to this guy, not knowing who this guy was," he said. "It's real dangerous. Parole violators are some of the most dangerous people we deal with because they don't want to go back to the penitentiary."

The current overall situation confronting officers is "unacceptable at all levels," Deputy Chief Nancy Kirkpatrick, commander of the communications division, said in an interview with The News. "On the major issues that officers have, there has not been a significant improvement."

City officials did not create a team to address the records-check issues until November. Mr. Levine said that many of the records-check problems would be fixed soon.

Mixing old and new

In addition to human error related to the sheer complexity of the new dispatch system, city documents blame some of the problems ☐ such as

emergency vehicles being improperly dispatched ☐ on the way the new system links to older equipment.

When the city decided to replace its 35-year-old homegrown emergency dispatch system with the new automated one made by San Diego-based TriTech, a money-saving decision was made not to buy the mobile software system that allows the computers in emergency vehicles to easily communicate with the dispatch system at City Hall.

Instead of spending millions on new software and hardware for emergency workers, the city opted to build a bridge between old and new for about $640,000.

"It's always difficult; you're bringing in brand-new sophisticated software on top of something that wasn't built to be integrated with this kind of software," said Chris Maloney, president of TriTech. "You're trying to shoehorn it with this great new CAD [computer-aided dispatch] system that wasn't built to work with it."

Experts say building an interface between two software products as Dallas did is a bit like asking a person who speaks only Chinese to speak to a person who speaks only Italian. Someone has to translate, and often something gets lost in translation ☐ especially if the translator isn't very good at his job, as seems to be the case with the Dallas computer interface.

"Those pieces, your mobile piece and your [dispatch] software, are pretty much connected at the hip," said Joseph Hindman, a police technology expert who works for the Scottsdale, Ariz., Police Department. "They have to talk to each other."

Mr. Levine, Dallas' top information technology official, said that the interface is working as it should and that the city made the decision to keep the existing in-car software as an "interim decision" to minimize the amount of change for police officers and firefighters.

Dallas officials now are considering buying TriTech's mobile software. Records show that project could cost almost $10 million, including $3.7 million for the software and related expenses and about $5.8 million to replace 510 mobile computers.

Meanwhile, frustrated emergency workers are coping as best as they can. One police officer expressed his frustrations in a Feb. 28 police report: "The CAD system is twice as slow as the old system that it replaced. ... If the people who decided to buy the CAD system had to use it, we might not be having these problems."

GLITCHES IN THE DISPATCH

A sampling of problems related to the installation of Dallas' new emergency dispatch system:

☐ Emergency vehicles are assigned to calls, but then the call is rescinded by a "ghost clear" glitch as it is en route to the location, leaving the emergency call unanswered until the error is caught and someone is reassigned to the call.

☐ When officers try to check license plates or look for outstanding arrest warrants, the information is often slow to get to in-car computers.

☐ Location information for emergency vehicles is sometimes slow to update, causing the system to show emergency vehicles at one location when they're really elsewhere.

☐ The dispatch system shows that emergency vehicles have arrived at a scene when they have not. Or emergency vehicles arrive, but the system does not show it. Emergency workers say this distorts the reporting of accurate response times.

☐ Officers can no longer send out divisionwide or citywide messages ☐ such as be-on-the-lookout "BOLO" alerts. Such messages now go to police dispatchers who find them only by checking their e-mail, and then they are relayed.

☐ The in-car interface with the dispatch system is generally cumbersome. One top-ranking city technology official wrote in a memo how she saw an officer get 37 separate messages about a single emergency as he raced with lights on and sirens blaring to help another officer. "To read the comments, he would have had to use keystrokes and fine motor skills," wrote Lynn Chaffin. "Not Good. Not Safe."

27858. Old DFD Suburban

From: Patrick Wrigg
Topic: 27858 Message: 27858

This morning when i was leaving for work i noticed a older DFD suburban with 2 occupants in it. It was sitting in front of some apartments. I noticed the driver doing some paperwork. What caught my attetion is they drove up, sat for about 15 minutes, then did a U turn and left. To me that seems a little odd.

I noticed this because it was right by where i live. I never heard anything dispatched (keeping it scanner related) but then with so many computer problems who can rely on that. LOL

Any thoughts on this?

Sounds as though one of these stores
at Valley Ridge and I-35E is using

467.7625 CH 1
467.850 CH 2

Didn't catch the CTCSS or DCS if they
were using one. Transmissions were too
brief. Just got lucky scanning through
some itinerants while close by.

From a press release for those interested in air ambulances in the area.

Terry

CareFlite Dallas/Fort Worth Orders An AgustaWestland AW109 Power Helicopter

AgustaWestland is pleased to announce that CareFlite Dallas/Fort Worth has ordered another AW109 Power light twin turbine helicopter. This purchase adds to the five AW109 Powers ordered in 2001 and further expands CareFlite's fleet dedicated to emergency medical service purposes. Speaking on behalf of CareFlite, President and CEO James Swartz stated "This latest contract further confirms the reliance CareFlite, as a leading US air medical operator servicing a major metropolitan area, places upon the exceptional performance, operational economies, support and EMS capabilities of the AW109 Power. AgustaWestland's AW109 meets and exceeds our load and range requirements while adding superior single engine performance. Its unequalled maximum and cruise speed facilitates an expeditious response to CareFlite's medical emergencies when seconds are critical."

(Above L to R) Eric Crawford - Agusta Westland Account Executive, James C. Swartz - CareFlite President & CEO, Louis Bartolotta - Agusta Westland's Executive VP of Sales, Bob Cleland - Agusta Westland's Director of Sales, photo taken at HAI Convention in Houston, Texas

Louis Bartolotta, AgustaWestland's Executive VP of Sales, stated "This AW109 Power is testimony to both the strong relationship we have had with CareFlite Dallas over the past 7 years and will continue to enjoy into the future, and the high level of critical care services that they will be able to provide the Dallas-Ft. Worth metropolitan area. We remain honoured to assist in the provision of that care." CareFlite's AW109 Power is certified for single pilot IFR operations and powered by twin Pratt & Whitney 206C engines. AgustaWestland provided CareFlite's aeromedical configuration to accommodate two litter patients and three attendants. For maximum flexibility the primary litter is a Life Port pivoting system. Both single litter and dual litter configurations allow full body access to patients.

A Dallas-Ft. Worth based rapid response air and group ambulance/911 EMS operator, CareFlite is one of the premier helicopter air medical operations in the United States. CareFlite is a 501(c)3 non-profit company sponsored by the Baylor Health Care System, JPS Health Network, Methodist Health System, Parkland Health and Hospital System, and Texas Health Resources (Arlington Memorial, Harris Methodist and Presbyterian Hospitals). The oldest joint use helicopter medical transport program in the United States, over 75,000 patients have been airlifted by CareFlite since the company's founding in 1979. Plus CareFlite is the only service in North Texas that operates under instrument flight rules during times of bad weather. The company has 17 GPS

approaches to North Texas hospitals. This permits the rapid transport of patients to critical care facilities despite the weather. CareFlite's EMS helicopters serve more than 100 counties within a 150-mile radius of the Dallas/Fort Worth Metroplex. The company also provides fixed wing air ambulance service for transports beyond the range of its helicopter fleet and an extensive ground ambulance/911 system. CareFlite is accredited by CAMTS, the Commission on Accreditation of Medical Transport Systems.

About CareFlite

C Non-profit 501(c)3 company based in Grand Prairie

C Offers helicopter EMS, fixed wing air ambulance & 911/ground ambulance service

C Oldest joint use air medical program in the United States, founded 1979

C Over 350,000 patients transported since 1979

C Six air bases and eight ground ambulance bases across North Texas

C Only IFR helicopter EMS program in the region with 17 proprietary instrument approaches to trauma centers & area hospitals

C Offers membership program to families to protect against the cost of medical transport from just $49 per year

C Provides standby medical services for Dallas Cowboys, Texas Rangers, SMU, TMS, others

C More information available at www.careflite.org <http://www.careflite.org/>

409.625 is State Dept, but I've never heard of .525
being used. Actually I have confirmed here in DFW,
409.625 as CH 1 & 2 (PL 151.4), but more than likely
they have gone P25 (possibly to .525 - I don't know)
And OK if it's NOT McCain, then who the hell is it, if
you seem to know?. Don't just leave me (and other
monitors) just hanging....

From: Peter C Kirk
Topic: 300 Message: 27873

Sorry, but there is no change in price, these are the same prices that have been in place for over 4+ years.

1 MONTH - $8.95 USD (Billed Monthly)

3 MONTHS - $24.95 USD (Billed Quarterly)

6 MONTHS - $49.95 USD (Billed Semi-Annually)

12 MONTHS - $99.95 (Billed Annually)

There comparable to all of the other services available out there.

But unlike the other crappy services, IPN is well worth it, as the service is still the best available in the USA.

and if they decide to increase the cost, it would be understandable, as the bandwidth, server costs, paging services and other expenses are well on the rise. 4 years of not raising the cost is pretty darn good in my book.

Peter

I guess it's been about 4 years since I've used the service! Geez though. It does seem high. The last time I looked to renew my subscription, I thought the service was around $60 which made me choose to let my account expire.

I'll give it a month and see if it wows me.

27875. Mock Disaster Drill in McKinney Today

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-15 13:33:07 UTC
From: Dustin
Topic: 27875 Message: 27875

From a McKinney ISD Press Release:
Mock Disaster Exercise Aimed at Preparing

McKinney ISD and City for Emergency

The McKinney Independent School District, in partnership with the McKinney Fire Department, Police Department and Medical Center of McKinney is coordinating an emergency exercise on Saturday, March 15 at McKinney North High School. The drill serves as practice for real-life emergency scenarios. Resources of people (MISD, MPD, MFD, Medical Center of McKinney, Red Cross, and others), fire engines, police cars, care-flight, and ambulances will be used.

"The exercise helps us prepare our emergency responders for a real-life emergency situation," said McKinney Emergency Management Coordinator Karen Adkins. "It is important for the community, particularly the residents who live close to the exercise scene and the media, to know that this is only a drill."

What: Mass casualty incident exercise

When: Saturday, March 15 from 8 ☐ 11 a.m.

Where: McKinney North High School, 2550 Wilmeth Road

Student and parent actors will also be involved in the mock mass casualty incident, complete with make-up applied as injuries. A full-scale parent information center will be set up at Vega Elementary School in order to practice the District's crisis communication and grief response plans. Observers will not have access inside the exercise area during the drill. Streets in and around the exercise area could be closed, so drivers should be prepared for detours.

The City of McKinney and the McKinney Independent School District have been recognized across the United States for their comprehensive crisis response plan.

For more information about the McKinney Independent School District, contact Cody Cunningham, Assistant to the Superintendent for Communications at 469-742-4133 or by e-mail at cocunningham@....

27876. DFW p97 file.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-15 15:27:14 UTC
From: Bob
Topic: 27876 Message: 27876

Does anyone have a p97 file that has DFW airport? I'm looking for
American Airlines in particular. The wife is flying back in on Monday
and I thought it might be neat if I could listen to her flight come in.

Thanks,
Bob

I don't have a p97 file, but these frequencies
should be a good start.

COWBOY was up around noon today. Heard two pilots chatting back and forth during a training mission in around NFW on 318.65, something like this:

COWBOY 1: Hey, where'd you say that golf course was?

COWBOY 2: It's just left off the departure end, over by L-M. It's that close.

(a minute later)

COWBOY 1: FOX 3, the guy with the 9-iron!

COWBOY 2: Good hit.

:)

27879. tower question

From: Mel's mail lists
Topic: 27879 Message: 27879

So does anyone know who owns the tower thats at Glenview and Booth Calloway in NRH? It's approx 400' give or take, but has absolutely no ASR number listed (illegal) and no contact info on the fence or anywhere else. Anyone know anything about it?

Thanks,

Melissa

I just finished making cheesecake, but I don't think I made enough for the whole list :)

Fuddruckers in Irving (183 and Belt Line) a "central" enough location? I know everyone comes from all over.

How about last day in March? Anyone have better suggestions?

Hi Group,

Anything besides Spring Creek BBQ please :) I know I can honestly say I speak for at least three other people who attend most meetings (as well as myself) when I say Spring Creek BBQ upsets stomachs. I'm not sure what causes the problem. The food's neither great nor bad, but every time I've ever eaten at those restaurants (any city they have them in) my stomach has really given me troubles. A few of us have talked about not ever going there again if we don't have to.

Since my vision prohibits me from driving, I'm at the mercy of friends who have brought me to the meetings through the years. So, I don't guess I have a whole lot of say in where anything is set up :).

Just please don't pick Spring Creek BBQ unless there's an overwhelming majority that wants to go there. Thanks!

Welcome home Rob, damned good to hear from you. I believe Fudnockers at Irving Mall would be a splendid idea! I'm with Brian, Spring Crick does not agree with my constitution either. Tuesday is out for me, but a Wedensday evening would be much better with my schedule. But of course, I remain rigidly flexible!

Could we possibly move it to a Friday evening or
Saturday afternoon?. Events during the week are
extremely inconvenient for us early risers. My
alarm goes off at 3:30 AM!.

If it's too much of a hassle don't worry about it. I
won't be able to attend, but I'll be there in spirit!...:)

I am all for a Fudruckers.
But is it inside the mall or a satelite of the mall?
Me and malls dont get along, unless its got a Big and Tall store. LOL

Maybe someone should put up a poll of members who want to attend, put what day is best for them, and maybe have several locations, Irving, GP, Arlington, Dallas, and lets see where most people are.

I am game with BBQ or a good Burger..

Thanks.

27899. New poll for dfwscan

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-17 18:47:10 UTC
From: dfwscan@yahoogroups.com
Topic: 4402 Message: 27899

Enter your vote today! A new poll has been created for the
dfwscan group:

Wow, the last poll we did was 5 years ago! Time for a new one.
What day/time is the best for you to have a get together?
Please select all that apply. The last one was added
especially for those of you who work overnights :)
The poll remains open for 3 days, so vote early and often!

o Sunday midday
o Sunday evening
o Monday evening
o Tuesday evening
o Wednesday evening
o Thursday evening
o Friday evening
o Saturday midday
o Saturday evening
o 3am any day

To vote, please visit the following web page:
http://groups.yahoo.com/group/dfwscan/surveys?id=2675672

Note: Please do not reply to this message. Poll votes are
not collected via email. To vote, you must go to the Yahoo! Groups
web site listed above.

Thanks!

Thanks for the welcome home, Mark!

Wednesday the 26th is particularly good for me. Friday the 28th, I fly out of town for an educational conference, so the weekend is no good for me, Blaine.

Irving or Arlington are both good for me. Hell, I'll even drive to Flower Mound if it'll help Blaine make it!

Funny thing is, FOX 3 designates an A-A missile, not an A-G weapon.
I think FOX 3 is usually an AMRAAM. So why they were locking onto
ground targets is beyond me. (Of course, I guess maybe they weren't
really acquiring at all, he might've just been joking around.
Sounded all business to me, though.)

27904. GTG THIS Saturday - noon

Yahoo group: dfwscan (2008 — 2009)

From: radi0chik
Topic: 27904 Message: 27904

So after discussing this with Rob, and seeing that Saturday noon is leading in the poll so far, we made the executive decision to go to Fuddruckers in Irving at noon THIS Saturday. I know it's short notice, but it works best with Rob's schedule, and hopefully we can have the biggest turnout.

I've made reservations, but I NEED to know if you're coming, so I can call her back with the number of folks (or at least a better estimate than "a bunch of geeks"). The Fuddruckers is not IN the Irving mall, but it's a storefront right there at the mall. It faces the west bound service road of 183 just west of Belt Line road.

If you've never attended one of these before, feel free to come on out - and bring your scanners. These are always a lot of fun, and everyone gets to meet each other in person.

Send an email to lists@... (so you don't have to reply to the entire reflector) letting me know if you're going to be there. If you wish to bring significant others/kids/mother-in-laws/whoever that's fine too :)

Hope to see everyone there!

27909. Texas DPS Config

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-19 21:50:48 UTC
From: tgray04
Topic: 27909 Message: 27909

Hello all.

Just wondering how ya'll have your DPS configured in your BCD396T.

There is a statewide APCO-25 Channel Plan, but there area also regional groups that consist of FM, NFM and APCO-25 frequencies within the same region. I'm trying to configure these systems but I'm really having difficulty getting my mind around what would be most affective. I live in Fort Worth and travel east often enough to figure this type of config out. I'm not quite sure what would be the most organized way to organize these in systems and groups. I am using the ARC396 software to program the radio.

Any help would be appreciated. Heading back to the RR forums to see if I can read more about the system there. I look forward to your responses.

Ray

Ray, analog in this area is just about gone with the exception of the tollway. The list below is what I scan and it gives me just about everything from Mineral Wells to Sulpher Springs to Tyler. The fact they use the same frequencies with different NAC's may lead you to see it as more complicated than it is. A 396 doesn't care about NAC. My labels may be a bit confusing since the radio I use only allows 8 characters but B2 and B2i are paired duplex and are the most used in the Kaufman/Rockwall area. AR is a repeater and is used by Tyler and I think BR is used by Waco as well as Sherman. Bottom line is stick these 9 frequencies in there and give them a listen and I suspect you'll hear what you want to hear.

From: Sarge
Topic: 27911 Message: 27911

I recently was given an Old scanner that had been given up for dead several years ago. This thing is older than many of you are. It is a RS Patrolman Pro-78. I used to work on these things back in the 70s. When you bought one you got 8 crystal certificates to mail off your freqs to a crystal manufacturer who then could take up to a month to mail your xtals back to you. First thing I did was replace the junky power cord. It has 8 channels with push buttons. It would not receive well and seemed off frequency. Since I do not have a freq gen anymore I decided to try an old trick remembered from my RS repair center days. I removed each crystal and sprayed contact cleaner in the sockets, then installed and removed each crystal several times to remove any corrosion that might be present. Yee Haaww, it worked. That old rascal now receives like a new one and just as good as any of my 5 other Uniden and RS scanners. I have received DeSoto fire and I am 45 miles North of Dallas as the crow flys. Ha, I am shickled titless!

27913. DFW Satellite receiving?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-20 18:22:35 UTC
From: firetxmi
Topic: 27913 Message: 27913

So, I have been thinking that I need to explore some different aspects of the radio (scanning) hobby. I have been looking around RR and listening to satellites has really peaked my interest.

Does anyone around here have any experience with listening to satellites in the area? What kind of equipment are you using? What tracking webpages/software are you using? Anyone listening to milsats? Any luck with AMSATS?

Any input/tips ya'll have are greatly appreciated!

Thanks,
Firetxmi

FWIW - Tried desperately to listen
to these before, but I guess I just
don't have the right setup. But from
everything I've read, most are encrypted
anyway, so really not that much to listen to.

And the stuff that is in the clear, not really
captivating. Unless you speak Spanish and
like listening to fishermen.

Hi y'all.

The updates might have not reached RR yet. One of my RACES Ass't Radio Officers works in the DPS radio shop at Region #1 (Garland) and he just returned from the panhandle two weeks ago after switching that area to digital. There are a few posts along the southern border which have not switched also. The last spot to convert will be the Austin area.

I guess the "Capitol" wanted to beta the rest of the state before they switched. hehehee

The only DPS station I am aware of that was still analog is the Mineral Wells station (WXR376) on 159.210.
At least they were about a month or so ago.

I don't drive where I could usually hear them much anymore and took 159.210 out of the frequency list of my
ID800 some time ago since most of what I was getting there was P25 which it doesn't decode.

West Texas was one of the first areas to go P25, so Lubbock and Amarillo should both be P25.

One of the other listmembers will probably speak up if there are any areas still using analog.

in region 5
Lubbock is going Digital,
Amarillo is still analog.
Childress is digital,
Wichita Falls is digital
Mineral Wells is analog.

in region 4
all stations are digital

I believe all stations in region 1 are digital, but I'm not sure

Region 6,
Waco is still analog,
and Lampassas is analog.
I believe the rest are now digital.

What the radio shop to us last week (Mineral Wells) that we (MW) and Waco will be the last two to convert to digital.

I just purchased a PSR-500. Mark, you
sold me on one at the meet up.....:)

BTW folks, awesome little scanner....
Sitting in Fudd's at Irving Mall surrounded
by all kinds of metal and various other junk,
this little baby and its stock antenna
picked up Mansfield FD like it was next
door. I was very impressed!

So what software is the best to program?
Win500?

Also, Mark, where did you get you carrying
case. I have a feeling this will become my new
all around base and mobile scanner.

Russ, thanks for the info. I wonder if you could clear up something for me? DPS Waco is communicating with Region 6 units on P25. I hear them on 159.2175, NAC 119, Radio ID 1. I suspect this repeater is somewhere in Ellis county and covers the very north end of Region 6. When you say Waco is analog do you mean the area right about the city because it appears they do have some P25 stuff going.

Thanks

Terry

Subject: Re: [dfwscan] DPS in the Panhandle

in region 5
Lubbock is going Digital,
Amarillo is still analog.
Childress is digital,
Wichita Falls is digital
Mineral Wells is analog.

in region 4
all stations are digital

I believe all stations in region 1 are digital, but I'm not sure

Region 6,
Waco is still analog,
and Lampassas is analog.
I believe the rest are now digital.

What the radio shop to us last week (Mineral Wells) that we (MW) and Waco will be the last two to convert to digital.

Russ
DPS Communications

Does anyone know how far Texas DPS has gone with the move to digital yet?
Specifically, I was wondering if it has reached Lubbock or Amarillo?

Thanks,

Bob Perkins

27927. Re: PSR-500 & 600

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-25 17:40:25 UTC
From: hiegtx
Topic: 27924 Message: 27927

Blaine,

There are three software packages for programming your PSR500: WIN500, PSREdit500, & ARC500. All of them have a trial period, so that you can see which one you like best before you pull out the plastic. Links to all 3 can be found on the 500's Wiki page <http://wiki.radioreference.com/index.php/PSR-500> on RadioReference.com.

All three, of course, will program and control your scanner. At present, unless I missed an update, only ARC500 will import *.csv files, though that is a 'coming attraction' for both WIN500 & PSREdit; just not in production as yet. If you have WIN96, you could import a *.csv into it, creating a *.P96 file. PSREdit & WIN500 will both import & convert your *.p96 files. You can, of course, cut and paste from the the*.csv into WIN500 or PSREdit500.

WIN500 has a remote monitoring application available, if you wanted to stream the scanner. Haven't tried that, but there was some discussion of that on RadioReference when Don Starr first released it. Originally this was a part of WIN500, but has since been broken out as a separate program. See the ever growing WIN500 thread <http://www.radioreference.com/forums/showthread.php?t=85037> in RadioRef's software section if you're interested. (There's also specific threads for PSREdit500 & ARC500, and all three software authors have been responsive to posts in the threads). Also specific to WIN500, for now, is a logging & recording option when controlling the scanner with your pc. You can select which specific talkgroups/conv. frequencies you wish to record out of the activity logged, and specify a max record time per hit so that a stuck mic (or interference) during unattended recording does not fill your hard drive up with useless drivel or noise.

WIN500 & PSREdit will both allow you to access & manipulate the v-scanner files. ARC500 also shows that in the feature listing, but I have not tried that program.

When I purchased my 500 last fall, I downloaded both PSREdit & WIN500 when both were still beta programs. Both do a good job. There were a couple of fine points where I liked one better than the other; I ended up registering both programs, & haven't regretted it. ARC500 was not released until well after I made my decision, and I don't see any reason to consider adding it now.

27928. Fire Dispatch Simulcast Frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-03-25 21:37:03 UTC
From: rob.davis@armynursecorps.com
Topic: 27928 Message: 27928

Please pardon my ignorance, but I've been seriously out of the loop here for a couple of years now. I checked RR without any luck.

Are there any DFW area fire agencies still dispatching runs on a conventional channel separate from their trunk system? I know that Arlington, Grand Prairie, and Mansfield all used to dispatch their tones on UHF-T band channels, even after going trunked. Kennedale and others still toned out on low band, even long after moving their operations to higher bands. Is anybody still doing this? Is anybody still on 46.06 in Tarrant County?

By the way, it was great to meet up with everybody last Saturday! What a great turnout! Thanks to everybody who came! I just ordered a couple of new scanners (Uniden, of course), and I'll be back in the game very soon!

rob.davis@... wrote:

> Are there any DFW area fire agencies still dispatching runs on a conventional channel separate from their trunk system?

Here in my area Rob, Denco still tones out some units on 155.835 (PL 118.8), but personally I'm hearing decreased activity on this frequency in favor of the main dispatch talkgroup on the 800 system.

Flower Mound still simulcasts tone outs on 154.145 (PL 118.8), known as the VHF "bump out" channel, although all activity is either on FMFD 1 or 2 on the 800 radio. Looks as though Lewisville has dismantled the old 154.385 channel. Highland Village was simulcasting fire ops on 156.000 for quite some time. Not sure about their situation now, as I only monitor the 800 system.

Of course, there's always DFR. Lancaster, Desoto, and Cedar Hill are still VHF. So is Seagoville, and Wilmer/Hutchins. Ellis Co. is VHF, so is Rockwall and Hunt. Collin runs rural EMS on 453.075. Johnson Co runs simulcast on 46.10 & 155.295. Parker and Wise still use VHF. There are several Tarrant agencies as well (such as Sansom Park) and others. Most of the stuff you see on RR is good as far as the ops freqs and PL/DCS.

> By the way, it was great to meet up with everybody last Saturday!

Agreed. Nice to see you again. Take care.

From: rob.davis@armynursecorps.com
Topic: 27931 Message: 27931

I'm on a roll today, with two posts!

I'm wondering if anybody here has any recent experience or knowledge of www.rfwiz.com. They are one of the first to come up in Google searches for scanners and antennas. I see them mentioned quite a bit in Radio Reference forums, but nothing very recent. They have some good prices on their site, but the site seems extremely out of date. All of the radios they have displayed on the site are models discontinued long ago, and many of them are even listed there as no longer available. So I'm wondering WTF their deal is. Are they still in business? I want to order an Austin Spectra antenna, and they have the best price on the net. But I'm not quite ready to risk ninety-bucks in an attempt to save twenty.

Thanks for any and all input!

Subject: [dfwscan] Anyone want to help a newbie??

I purchased an optoelectronics digital scout frequency counter with the reaction tune. I wanted a good scaner so I got an icom IC R20. I will build the reaction tune cable later this week. I am having problems making sense on how to use the frequency counter.

.>>> The frequency counter looks for strong signals in the area. It's less sensitive than scanners like the Uniden 396 since it uses a different method. They are very handy if you want to hear a signal being transmitted in a close proximity. By close I mean typically within sight. This varies greatly depending on the floor noise. The more transmitters in the area the greater the floor noise and since the counter is looking for a signal much higher you have to be closer. That said it's really interesting sometime just to see what pops up around you.

Is there
anyone here familliar with the setup? What is a good frequency list to program for the area?

>>>> www.radioreference.com has a very good database. I would suggest you check there for data.

What do I have to do to get this think trunk
tracking?

>>> sorry to say it will not trunk track. You can enter all the frequencies of the system in the radio and hear everything on the system but unless it's a very small and quiet system you'll get such a mix of stuff you'll not be able to follow a conversion. The good news is many cities like Dallas are still conventional and can be monitored by the radio you have. Considering the price if you can return it I would. A Uniden 396 or PSR 500 will probably be much more useful to you.

Who can tap the discriminator? New to the hobby and trying
to make sense of it all. I probably should have done a bit more research before I jumped in.

Thanks

>>> There's a lot of folks on this list with experience with a variety of radios. Throw out questions as you work your way through and I'm sure you

get some answers.

Blaine,

There are three software packages for programming your PSR500: WIN500, PSREdit500, & ARC500. All of them have a trial period, so that you can see which one you like best before you pull out the plastic. Links to all 3 can be found on the 500's Wiki page <http://wiki.radioreference.com/index.php/PSR-500> on RadioReference.com.

All three, of course, will program and control your scanner. At present, unless I missed an update, only ARC500 will import *.csv files, though that is a 'coming attraction' for both WIN500 & PSREdit; just not in production as yet. If you have WIN96, you could import a *.csv into it, creating a *.P96 file. PSREdit & WIN500 will both import & convert your *.p96 files. You can, of course, cut and paste from the the*.csv into WIN500 or PSREdit500.

WIN500 has a remote monitoring application available, if you wanted to stream the scanner. Haven't tried that, but there was some discussion of that on RadioReference when Don Starr first released it. Originally this was a part of WIN500, but has since been broken out as a separate program. See the ever growing WIN500 thread <http://www.radioreference.com/forums/showthread.php?t=85037> in RadioRef's software section if you're interested. (There's also specific threads for PSREdit500 & ARC500, and all three software authors have been responsive to posts in the threads). Also specific to WIN500, for now, is a logging & recording option when controlling the scanner with your pc. You can select which specific talkgroups/conv. frequencies you wish to record out of the activity logged, and specify a max record time per hit so that a stuck mic (or interference) during unattended

recording does not fill your hard drive up with useless drivel or noise.

WIN500 & PSREdit will both allow you to access & manipulate the
v-scanner files. ARC500 also shows that in the feature listing, but I
have not tried that program.

When I purchased my 500 last fall, I downloaded both PSREdit & WIN500
when both were still beta programs. Both do a good job. There were a
couple of fine points where I liked one better than the other; I ended
up registering both programs, & haven't regretted it. ARC500 was not
released until well after I made my decision, and I don't see any reason
to consider adding it now.

Terry,

In the 'log' mode, you can enter enter a wildcard talkgroup & have the WIN500 both log & add new talkgroup IDs for a trunked system on the fly (new ID's being those that are not entered; those that are entered, but locked out, are ignored by the wildcard).

For conventionals, you might take a peek at this <http://www.radioreference.com/forums/showpost.php?p=749686&postcount=57\2> post from the WIN500 thread on RadioReference. Don S (Don Starr, the software author) indicated that this type feature was added to version 1.44. Add a Signal Sweeper (search) object to a scanlist, with nothing else enabled (I assume he meant in that list). Items found would be logged with frequency and the PL, DCS or NAC code found. Not stored, but at least logged for review. I have not tried this as yet, too many other projects, but sounds good. Haven't seen comments on anything similar in either PSREdit500 or ARC500 (could have overlooked them, but not real likely).

OT: Noticed several new DPD deployment talkgroups while running my 246 in ID search mode the last couple of days. Submitted those to RadioRef for updates.

From: Blaine Brooks
Topic: 10276 Message: 27937

For sale:

Radio Shack PRO-96 Scanner
(has DSP upgrade, but version 1.1
firmware - still performs beautifully)

Great sound quality, decodes P25
very well. Excellent for area 800
trunking. Works great with duck
antenna or hooked up to outside
antenna. If you've been holding
back going digital, now's your
chance!

This has been my primary scanner
for the last couple of years. If any of
you remember me streaming audio
from my scanner a while back, this
was the one I was using (so you know
the sound quality). My reason for selling
is I'm upgrading to a GRE radio.

Asking 300 dollars (preferably cash).

If interested, please respond privately
to: blaine.brooks@....

I hear them on 159.2175, NAC 119, Radio ID 1 talking to Ellis Co units. They identified this as Boyce the other day. I know Boyce is a tower location for many thing in Ellis Co. Looks like 13A for the north and B1 for Waco area.

Terry

According to the map, Boyce is halfway between
Waxahachie and Ennis. Looks like they might be
piggybacking on the county tower at 879 near
Ruth Rd.

Looks like 13A for the north

I think the splinter is 13B. can't wait to get my
PSR and start putting in some of these NAC's.
Arrives Monday!

122.85 Speedway Control....this frequency
has been used for the last couple of
years as sort of a "airboss",if you will,
kind of frequency. Not sure if there is
a discrete UHF paired up with it. Probably
not, since the military flyover jets usually
talk with Reg Approach.

122.775 Helicopter/Plane/Media Unicom common -
West Metro

Alliance Tower (135.15/120.825/288.15) will also
be used, as well as NW Regional unicom on 122.9.

The military flyover jets and such will coordinate
on 306.95/118.1, and their own discrete a/a's.

27957. Back In The Saddle Again

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-03 20:49:06 UTC
From: rob.davis@armynursecorps.com
Topic: 27957 Message: 27957

I finally got a couple of new scanners yesterday. My very first trunking scanners. So now I am in the process of re-learning the hobby that I was once a master of. Jesus H. Christ, this has gotten friggin' complicated! Damn, do I feel old!

I got both a BCD396T and a BCD996T. I'll add more later, but seeing as I am probably not going to be in the U.S. much longer this time, no sense in getting crazy with it yet.

I have to say that I am not happy or impressed with how these devices have "progressed" in the last ten years. It seems that too much attention is being given to little techno-geek tricks, like GPS scanning, and not enough attention to the basic function of the scanner. A few early observations:

* Scan and search speeds: WTF? You can scan hundreds of conventional channels in the time it takes to scan one trunk system. This cannot be that hard to fix!

* Priority? What do you mean you can't have priority channels in trunk systems? Motorola, GE, and Johnson can figure it out, but Uniden can't?

* Are they hiring middle school drop-outs to write these manuals? A good number of the terms in there cannot even be found in the index to be easily looked up. There is no logical progression or intuitiveness to the layout of the manuals.

* Why not hire the same engineer to design both the handheld and mobile scanners, so we don't have to learn two completely different systems to use them? The controls should be the same, like they were before. And why are there different display colours for the mobile than on the handheld? Maybe let the left hand know what the right hand is doing.

* I don't get the whole "smaller is better" school of thought with handheld scanners. The damn things don't have to be small enough to slip in my shirt pocket. Make them big enough that operating them is easier and then maybe you can put better sound in them.

* And definitely give me a function/selector knob that is separate from the volume knob! There is plenty of room for a second knob there. It really pisses me off to end up losing my conversation every time I try to turn my volume up or down.

Of course, I haven't even gotten into trying to program these things yet. Just running off the pre-programmed systems is hard enough. I'm sure I'll have plenty more to complain about soon. But at this point, I am about convinced that the headaches prevented by simply buying Motorola would be worth the money spent.

Don't get me wrong. I'm a serious Uniden man. And there are plenty of things I love about these scanners too. But for crying out loud, let's not keep adding complications simply because you can. If you complicate these things beyond the easy comprehension of the common man, you are alienating a large percentage of your potential customer base. Keep it simple, and make sure it at least does the basic things a scanner should do.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-03 21:14:06 UTC
From: Paul Opitz
Topic: 27957 Message: 27958

Scan Speed: a common mistake is to leave the default system hold time at 2 seconds. This forces the scanner to continuously rescan a system for 2 seconds before moving to the next system. Set this to 0 and it will scan conventional channels once then move on to the next system. Trunked systems will still hold for about 2 seconds, but this will be dramatically reduced after the upcoming firmware update.

Trunking priority only works a little on some systems even on those scanners that support it. It requires that the TG's you assign as priority are also assigned as priority by the trunking system administrator (and many, many systems don't implement priority at all). You should read the threads of confusion around this feature on the PSR500/PSR600 lists. I'll probably still push for this on the next gen, but it isn't going to work well for most people since the data to make it work isn't included in the infrastructure itself.

Manual: Common complaint...but if you use the d/l version from our web site, you can search by key word in the PDF. You should also read the article reprint included with the scanner and http://www.uniden.com/products/ButIjustwanttolistentothePolice.pdf.

I did design the features and human interface for both scanners...but the 996 came out almost a year after the 396 did, so I was able to incorporate more of what I had learned about the 396's shortcomings into the 996 (like multi-site, Close Call DND, etc).

I finally got a couple of new scanners yesterday. My very first trunking scanners. So now I am in the process of re-learning the hobby that I was once a master of. Jesus H. Christ, this has gotten friggin' complicated! Damn, do I feel old!

I got both a BCD396T and a BCD996T. I'll add more later, but seeing as I am probably not going to be in the U.S. much longer this time, no sense in getting crazy with it yet.

I have to say that I am not happy or impressed with how these devices have "progressed" in the last ten years. It seems that too much attention is being given to little techno-geek tricks, like GPS scanning, and not enough attention to the basic function of the scanner. A few early observations:

* Scan and search speeds: WTF? You can scan hundreds of conventional channels in the time it takes to scan one trunk system. This cannot be that hard to fix!

* Priority? What do you mean you can't have priority channels in trunk systems? Motorola, GE, and Johnson can figure it out, but Uniden can't?

* Are they hiring middle school drop-outs to write these manuals? A good number of the terms in there cannot even be found in the index to be easily looked up. There is no

logical progression or intuitiveness to the layout of the manuals.

* Why not hire the same engineer to design both the handheld and mobile scanners, so we don't have to learn two completely different systems to use them? The controls should be the same, like they were before. And why are there different display colours for the mobile than on the handheld? Maybe let the left hand know what the right hand is doing.

* I don't get the whole "smaller is better" school of thought with handheld scanners. The damn things don't have to be small enough to slip in my shirt pocket. Make them big enough that operating them is easier and then maybe you can put better sound in them.

* And definitely give me a function/selector knob that is separate from the volume knob! There is plenty of room for a second knob there. It really pisses me off to end up losing my conversation every time I try to turn my volume up or down.

Of course, I haven't even gotten into trying to program these things yet. Just running off the pre-programmed systems is hard enough. I'm sure I'll have plenty more to complain about soon. But at this point, I am about convinced that the headaches prevented by simply buying Motorola would be worth the money spent.

Don't get me wrong. I'm a serious Uniden man. And there are plenty of things I love about these scanners too. But for crying out loud, let's not keep adding complications simply because you can. If you complicate these things beyond the easy comprehension of the common man, you are alienating a large percentage of your potential customer base. Keep it simple, and make sure it at least does the basic things a scanner should do.

I should also have mentioned that there are 7 stages of Dynamic Memory world view conversion (for those familiar with banked scanners) that you should prepare yourself for:

Confusion
Frustration
Anger
The "Aha!" Moment
Understanding
Devotion
Willing Slave

27960. New PSR-600 Owner

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-04 13:02:37 UTC
From: tangier1401
Topic: 27960 Message: 27960

I am the new owner of a GRE PSR-600 and am very impressed thus far - given the "learning curve" - so to speak. That being said, I am really interested in seeing it's performance on P-25. Can anyone pass on which P-25 frequencies (usually non-encrypted) that I should be able to receive from Flower Mound? Thanks in advance...

Tangier

I'm still playing around with my new PSR-500
attempting the "learning curve", so to speak.
This is one heck of a complex radio, but the
features are immense. One of the days soon
I will consider myself an "expert" with my new
toy, but that'll take awhile. Right now, join
as many Yahoo and RR groups on the
subject as you can, and soak up the
information like a sponge. And I HIGHLY
recommend reading the owners manual,
possibly several times. There are also
some "extended" or "extra features" of this
radio to tweak around. A good software
program like PSREdit or Win500
(my preference) are a MUST. Otherwise,
you better have a lot of time on your hands
with those little buttons!

Anyway, try 159.2175 NAC111 Sherman DPS
for starters. That'll give you an idea of how crisp
and clean this radio decodes digital. It's a beauty.
Actually, you don't even have to put in the NAC
code initially. The radio automatically decodes it.
Sweet! For fed try USSS on 164.650 NAC001.

BTW - Nice to have another monitor in Flo Mo!

Very well put O-Man!, even though I am a new GRE owner.I quickly progressed through stages 1 through 3 after ahem, "reading the damn manual", which as a normal human male I am inclined NOT TO DO (LOL). However, once reaching the "Aha Moment" stage, things can be quite refreshing!

Thank the gods of computer operated scanning for the ability to transfer files between scanners. I transfered my P96 file to the GRE and viola! While I will certainly tweak along the way, at least that function allows most monitors to start listening right off the bat. Same with the pre-loaded or V-Folder data.While not always up to date data, and least there is a very good possibility you'll hear SOMETHING, which is a hell of a lot better than hearing NOTHING.

rob.davis@... wrote:

> this has gotten friggin' complicated! Damn, do I feel old!

Don't feel bad Rob. I've been doing this
since I was about 15, and believe me
I've seen, owned, and sold my fair share
of scanners along the way.

I agree in many respects it's way too much
of a technology dependent world. But we
might as well hop on board, and enjoy the
ride, even if we're missing a wheel or two. Heck,
I don't even know how to text message!. I
feel it is a ridiculous thing. Just CALL the
person!. People spend more time punching
little keys than they do talking to the person.
Young kids use it all the time as an alternative
to not being able to do phone calls at work.
Pisses me off. They are ALWAYS on their
damn phones. Makes me want to yank them
out of their hands and stomp on them. The kicker
are the people that talk on their cell phones at the
urinal or on the throne. That's absurd.

Anyway, I'm getting WAAY off track. In regards
to scanners ONLY, the way I look at it is that I
may only use half of the total capability of today's
digital scanners for my own individual monitoring
needs, BUT the extra features are there should
I ever need them. Which is nice.

While doing some frequency database
research for my PSR-500, I came across
this info & link from the state med registration
site. Some of you may already have this link,
but I thought I'd post it anyway as it has a list
of all EMS providers in the DFW metro area.
It's a great list to cross reference to make sure
you're listening to everybody if you enjoy
monitoring FD/EMS agencies.

The Texas Ranger opener is on Tuesday, 4/8, at 1 PM. I heard today that there will be a flyover by two B1-B's from Dyess AFB. Does anyone have a guess about the frequencies that might be used ? I have a scanner that will receive milair frequencies, but I don't know if there are normally channels that the pilots use to communicate with non-military folks at the ballpark to coordinate the flyover.
Thanks,
David in Richardson

Costly for a mixer, but it has a lot of features, and
reviews have been good.

Hello Jay,

How much do you want to spend? Check out this unit, it's real nice but expensive.

http://www.ncsradio.com/m_rx.html

They make other units that are also good for mobile

Not sure what other options are there but there are probably others that are not as fancy or as expensive.

The unit from Fleet Radio Products works great. I have one and have had it for thee years. I bought mine at HamCom for $99.00 three years ago. I think normally they are $129.00. Well worth the money at either price.

So far they are looking like the best bet..

I am going to call them and see if I can just get the bare board.. Save
$$$..

27980. Where is the Ticket Compound?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-08 21:54:40 UTC
From: Jay Pinkerton
Topic: 27980 Message: 27980

Sports Radio 1310 the ticket is on secret remote this week. If you are a listener to the ticket, you know what I'm talking about. I'm sure they are hooking up to the "Mother Ship" via a land line but turn on your scanner and see if you can hear them. Maybe they are hooking up via RF. I have their remote frequency at 450.7750. I have heard them on this frequency in the past.

I can't here anything here at Greenville and Forest lane in north Dallas.

I would not advise going and knocking on the door if you happen to find it. Please don't harass them. It would just be fun to find them. Lets just keep it to ourselves.

As you Hams know this could be a fun Fox Hunt.

Heard Fox 4 talking about it on their ENG channel.
Mental patient in a residence. Apparently, no hostages,
weapons, or threats to LE, so Fox was treating it as a
non-issue event as far as coverage, unless it escalated
to something more major, like shots fired.

I did ask the engineer ... since he is a friend of mine.

The remote is on Verizon FIOS first, ISDN second and as a last resort RF.

Kudos to the great storm spotters on 146.920.
An amazing network of folks always at the ready.
Quick question though.....why do the hams
identify like this? "This is"......pause, pause, pause,
kerchunk , and then their call sign.....Sort of
like they have Shaun Rabb syndrome....:)

Why do they pause? Why don't they just go ahead
and say their call sign?

I know there is probably some reason for it, but it just
sounds very odd.....

Supposedly it gives people with a bigger emergency that you time to break in. To me it doesn't make any sense and I think it sounds dumb, but that is also how they taught us to ID when I was in AF MARS and that is probably where Denton picked it up.

i haven't been on the local repeaters and don't know what technology they're using, but my first thought was they might have an 'auto-id' system set up and the operator was un-keying and generating the auto sequence which keyed the radio or repeater back up.

but i'm probably far off base with that speculation ...

Thanks to those who responded publicly
and private regarding procedures and such
for the net. I knew there was some reason for it,
but just didn't know what it was.

BTW - Units in Ponder asking to set off warning
sirens, probably Sanger too. Heard on DCFD
Co Net CH 1.

Also, tennis ball sized hail went through
Decatur. Ouch!

27994. LTR Madness

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-10 02:04:57 UTC
From: Brian Rodgers
Topic: 27994 Message: 27994

G uys, I've lurked for quite awhile, but rarely ever post. I've just moved to Burleson, and know that they recently changed to the LTR system. With the storms going on today, I thought it might be a good time to get my scanner updated. I went to RR.com, got the frequencies and IDs, pulled up Win97 to plug them in, but I'm obviously missing something. RR.com has four frequencies listed, and I've put those in the bank, and set the Rx Mode to LTR. I've also gone down to the lower right where I have entered the IDs, as well. But, when I upload it to the scanner, it doesn't pick up anything.

Is there something obvious anyone could think of that I'm missing here?

Thanks!

Brian,

Make sure you enter the frequencies into a bank in the proper LCN position. LCN 3 for instance should be put in channel 303, if its bank 3. Several channels in between frequencies will be left blank. LTR systems generally use the rule of 3 or 4, spacing out the frequencies in a 20 channel system so the home channel controllers work better. Then be sure to set each channel to "LT" mode by pressing the MODE button until LT displays. Then be sure to hit PGM and the "T" or trunking button to set the proper bank mode for the bank you have put the frequencies in. If you do all these steps, you should be able to hear the system if you are close enough. The Burleson system is not that strong from what I've been told, if you are not close you may not pick it up.

I count 5 LCN's on the Burleson LTR System:
LCN1-482.9875
LCN2-N/A
LCN3-N/A
LCN4-N/A
LCN5-482.5250
LCN6-N/A
LCN7-N/A
LCN8-N/A
LCN9-482.6750
LCN10-N/A
LCN11-N/A
LCN12-N/A
LCN13-482.6500
LCN14-N/A
LCN15-N/A
LCN16-N/A
LCN17-482.5500

Hope this helps...Mike in Garland

They all help immensely. Apparently (and who would have guessed this?), these things work MUCH better when you put the correct frequencies in the correct slots.

Thanks to everyone for your help!

It serves a two-fold purpose.
One, it tries to prevent doubling, that is, when two people key up at the same time.
Some folks pause more and some less, so hopefully, one guy will hear the other and not key up again.

Two, it allows folks with priority traffic an opportunity to jump in.

Saw the radar from that supercell storm that tracked from around Abilene.
Looks like it went right over Decatur and Valley View.
Hope it didn't tear too much stuff up.

Myles near Houston

27999. Weather Chaser Frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-10 03:49:29 UTC
From: Richard Whitenight
Topic: 27999 Message: 27999

With the next round of storms scheduled to hit the DFW Metroplex around 3-4 AM, I'd like to listen to HAM or Amateur bands that are used by RACE. Would someone provide me with the frequencies used by the storm chaser's?

28002. Weather Damage Last Night

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-11 05:20:59 UTC
From: Mark Colborn
Topic: 28002 Message: 28002

Last night was definitely interesting and made for some good listening. Hope everyone on the list fared well and didn't suffer any significant damage, which after the sun came up this morning, became very apparent. The news was reporting that the NWS only recognized several tornadoes in the area. I would have to question that observation. I'm not a weather expert, but I have surveyed a lot of storm damage from the air over the years. I've seen everything from the cat 5 Jarrell tornado where the asphalt was literally sucked off of the road surfaces and slabs with pipes sticking out were the only parts left of houses, the mile wide Lancaster tornado, the Wylie narrow snaking tornado that destroyed a house on one side of the road and left the neighbor on the other side of the street with no damage at all, straight line wind damage and microburst damage. The damage I saw this morning while flying first over I-35W down near Alvarado where several houses were destroyed, a lumber company destroyed and 18-wheelers overturned on the freeway, Saginaw and north Fort Worth where multiple warehouses and residential homes north of 820 were significantly damaged, then to Valley Ranch area and up into Carrollton where trees were uprooted, three antennas from an AM radio station toppled, and roofs ripped off apartment homes, a church and several warehouses. I would have to say those were all small embedded twisters. I just don't see how that kind of concentrated narrow corridor damage approximately one mile long could be the result of straight line winds. People in Plano were upset that the sirens were not blown. My response to that is get a weather radio and a scanner, stop waiting for the government (or some dude with perfect hair and bad tie in a TV studio) to look out for your safety!!!

Mark

From: Blaine Brooks
Topic: 28003 Message: 28003

Unidentified talkgroup on the Denco 800 --16720.
Some possibilities as to what it might be used for,
and asking for any assistance from the list as to
what units may use. The radio traffic I heard this
morning was car to car from "300" units - 302,
304... (NOT Corinth PD). It sounded "constable like",
as the units were discussing a person they had to
serve papers on before 6 this evening. They are
NOT Warrant units, as these units discussed
what the Warrant guys were doing for the day
(separate ops), and said something to the effect
that "I'm glad we don't do that stuff", and "I'm just
8 to 7 Monday through Friday". Any guesses?

Mark Colborn wrote:

> I'm not a weather expert, but I have surveyed a lot of storm damage from the air over the years.

I'll jump in here for the sake of discussion, and basically for the heck of it, and say, I sit on the fence with this, Mark. I (like you) have seen my share of wind and storm damage and dodged thunderstorms (from the air) and came dangerously close to a waterspout while driving across one of the bay bridges in Tampa, but I have to say, even though Florida is the lightning capital of the US, good 'ole Texas has some of the damnedest weather I've seen.

It still freaks me how it can be a beautiful blue clear sky day and the friggin' wind be blowing continuously at a 30 MPH gust! Throughout my life I have only been used to that around approaching storm fronts, NOT clear days!

The enormous variety of weather conditions, and topography here in Texas leads me to believe many tornadoes are detected, but many may NOT be. BUT, on the other hand, we have the straight line winds you discussed of, which are dangerous enough. Gale force or hurricane force winds of 80 MPH WILL cause damage, no doubt about it. And Texas is right in the bullseye of cool air off the Rockies meeting Gulf moisture from the south.

I get sort of angry at the folks that say "oh, it was definitely a tornado" when interviewed on TV or radio. Well, from my storm spotter training in order for it to be considered a tornado, a funnel or vortex has to be visually spotted between the cloud base and the earth surface, and said funnel has to actually come into contact with the ground. Unfortunately, many of these can be rain wrapped, as we have a large number of "high precipitation" storms that frequent our area, so "visual" spotting can be iffy sometimes. To me, it's not a tornado unless it's VISUALLY confirmed, because radar can make mistakes. Radar is just a nice tool. It can show hook echoes, but that still doesn't mean it is a CONFIRMED tornado.

>My response to that is get a weather radio and a scanner

Amen brotha'!. On this I completely agree. We as scanner hobbyists have the upper edge of what is going on in our communities. I know personally the storm spotters in Denton County are an excellent group, always at the ready. 146.920

is ALWAYS going in my shack or mobile during bad weather.
Skywarn frequencies in one scanner, public safety in another,
and a programmable SAME weather radio is the way to go.

LOL on the TV weatherman comment....:) I had a co-worker
tell me he was watching one of the TV channels the other night,
and the weatherman said "if you are in XXX you don't need to
be watching or listening to me, you need to be in the lowest
level of your house or a closet." Imagine that - a weatherperson
not wanting anyone to see their goofy mug, plastic hair, and
ridiculous tie!

28005. New Rescue 4 for Richardson FD?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-11 15:06:41 UTC
From: Jeff Mullowney
Topic: 28005 Message: 28005

This morning (Friday, 11 APR), the Richardson FD dispatcher was having trouble with a stuck mike on Rescue 4, which was on a call. They kept saying it wasn't them. Turns out it was communications maintenance in the city garage working on the radio in the "new" Rescue 4.

Anybody know anything about the details on this? And what about programming two radios in a system with the same ID? I would've thought this couldn't be done (like trying to give a computer file a name that already exists in the folder - you get warned).

28007. Re: Weather Damage Last Night

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-11 15:42:08 UTC
From: Tracey W. Singleton
Topic: 28002 Message: 28007

Morning all,

This just shows that you can't rely on preliminary information released by the news media. The NWS storm teams didn't complete their observations until late yesterday afternoon, and some are still ongoing. As of last night the number of tornados had increased to five. How can anyone (let alone the media) make a final determination of storm damage when the sun has just come up on a night of devastation. We can all sit around and berate the experts, but I highly doubt most of us have the engineering and damage assessment skills to make those determinations. Lets all wait and let these guys do their work and complete their final report before second-guessing them.

I will definitely agree with Mark on the weather radio comment. While most of us radio nuts are tuned in and stay on top of the action, there are thousands of folks that probably slept right through the event, when they should have been huddled in their bath tubs. We all know these people that don't take the weather seriously, and they are usually the ones you read about in the obit section of the newspaper.

People need to be responsible and use their God-given brains to protect themselves and not rely on a city emergency warning siren system to tell them to "get out of bed, turn on the radio/tv and save your own @ss".

As a former 911 dispatcher, I can almost guarantee you that they are not weather trained, and only a handful have ever been to a Skywarn training session. Dispatchers are the ones that normally physically control the sirens and unless somebody in the field observes a tornado, or the cities are in direct contact with NWS, the sirens will sit happily on their towers and not make a sound.

That's one of the reasons I don't dispatch anymore. Dispatcher brains are being replaced with flawed electronics such as poorly designed CAD systems and Bitchin' Bettys (locution.com), and are overseen by management types that don't want to turn on the sirens because "It might scare the public and cause panic".

I won't mention where, but I have personally been in a dispatch center when a tornado warning was issued by NWS, with rotating supercells, and not a single manager had the cahunas to take responsibility and authorize activation of the sirens. And this was a dispatch center that was responsible for county-wide dispatch of 12 fire agencies. They didn't even get on the radio and announce it to the field units! It was if it never occurred. Or other times it took

10-15 minutes to get activation approval, and the storm was long gone by then. Absolutely absurd.

I sit at home sometimes and just grit my teeth when listening to their comms. It makes me sick because I know some good people that do their best to be good dispatchers, but their hands are so tied they can't even #$*% without somebody elses approval.

The bad part is the general public thinks they have someone looking out for their safety in the middle of the night that will protect them from all dangers. It is sad to say, but they are a misguided bunch.

Wow, I kind of jumped on my soapbox. Sorry for the tirade...back to scanning.

Everybody have a great week and enjoy the sunshine.

As Mark alluded to, 1310AM lost 3 of its 4 tower AM array. Their site is
near Belt Line and Luna roads. I took pics yesterday.
www.km5r.org/funstuff/ticket

They're transmitting from their remaining tower - 2.5kw

The car (Explorer best I can tell) is full of cement from the back side of the truck. Truck appears to have jumped the center median taking out the bike and landing on top of the Explorer. They were using the JAWS of life earlier, so it makes me think whoever is IN the explorer is still alive.

I'm watching it via our chopper's video.

Not sure which one (there was the one on
Stemmons at Carpenter, and another nasty at
Skillman and Northwest) but they had at least
one confirmed fatal. And also (not sure which one)
they had two kids in the vehicle, and working to
extricate both.

Blaine, from what i heard on the radio.
EN37 called for 3 rescues and a batt chief due to a possible fatality.

As far as the kids part i didnt hear anything about that.

I also heard EN55 say they had 2 vehicles on their tops, and this was
the same incident as EN37 was on.

Here's the latest from the Stemmons accident:

Fatality - Northbound John Carpenter at Mockingbird

At about 3 PM a cement truck driven by a L/M/? was traveling southbound on John Carpenter, when he swerved to miss another vehicle. This caused the cement truck to strike the center wall and flip into the northbound lanes. The cement truck struck a motorcyclist ridden by a L/M/34. The motorcyclist was transported to an unknown hospital in serious condition. The cement truck then landed on a SUV driven by a L/F/41, killing the driver. The SUV was also occupied by a L/F/6 who was recovered from the vehicle by DFR. The 6 year is in critical condition and was also transported to an unknown hospital. The driver of the cement truck was transported to an unknown hospital in serious condition.

Four injured:

L/M/34- Motorcycle - Serious condition
L/M/? - Cement truck - Serious condition
L/F/6 - SUV - Critical condition
L/F/41 - SUV - Deceased

This is the Stemmons and Carpenter one. They DID just get someone alive out of the back seat. Just cut the top off the explorer and covered up the driver seat with black plastic. I don't know the status of the cement truck driver or the biker.

From: Terry
Topic: 28002 Message: 28018

Hey, don't be putting the media down! Let's stand you up in front of a camera and force you to blather on and on and I bet you start making up crap too!!! While I try not to watch I couldn't help myself the other day. Here we have a highly trained weather guesser telling everyone the world is coming to an end and to take cover and they the pitch to a reporter in the exact same place that describes standing there looking at the black swirling clouds above him! If it's that dangerous shouldn't he be taking cover? Don't get too discouraged about the 911 stuff, it's just a sign of what's happening everywhere...

Oh and let's see, you want people to be able to take care of themselves. Good luck with that! These are folks that have OnStar so they can figure out how to get into their car that they have just locked their keys in. Or have someone bring them some gas now that they have coasted to a stop in the middle of the freeway. The definition of people taking care of themselves is they have a cell phone. That way they can call 911, get an overworked dispatcher that's handling way to many things and try a describe "their" major problem without having a clue as to where they are. And these folks are going to figure out a WX radio and scanner!!!

I really can't complain too much, it's really good for my business!

Terry

Subject: [dfwscan] Re: Weather Damage Last Night

Morning all,

This just shows that you can't rely on preliminary information released by the news media. The NWS storm teams didn't complete their observations until late yesterday afternoon, and some are still ongoing. As of last night the number of tornados had increased to five. How can anyone (let alone the media) make a final determination of storm damage when the sun has just come up on a night of devastation. We can all sit around and berate the experts, but I highly doubt most of us have the engineering and damage assessment skills to make those determinations. Lets all wait and let these guys do their work and complete their final report before second-guessing them.

I will definitely agree with Mark on the weather radio comment. While most of us radio nuts are tuned in and stay on top of the action,

there are thousands of folks that probably slept right through the event, when they should have been huddled in their bath tubs. We all know these people that don't take the weather seriously, and they are usually the ones you read about in the obit section of the newspaper.

People need to be responsible and use their God-given brains to protect themselves and not rely on a city emergency warning siren system to tell them to "get out of bed, turn on the radio/tv and save your own @ss".

As a former 911 dispatcher, I can almost guarantee you that they are not weather trained, and only a handful have ever been to a Skywarn training session. Dispatchers are the ones that normally physically control the sirens and unless somebody in the field observes a tornado, or the cities are in direct contact with NWS, the sirens will sit happily on their towers and not make a sound.

That's one of the reasons I don't dispatch anymore. Dispatcher brains are being replaced with flawed electronics such as poorly designed CAD systems and Bitchin' Bettys (locution.com), and are overseen by management types that don't want to turn on the sirens because "It might scare the public and cause panic".

I won't mention where, but I have personally been in a dispatch center when a tornado warning was issued by NWS, with rotating supercells, and not a single manager had the cahunas to take responsibility and authorize activation of the sirens. And this was a dispatch center that was responsible for county-wide dispatch of 12 fire agencies. They didn't even get on the radio and announce it to the field units! It was if it never occurred. Or other times it took 10-15 minutes to get activation approval, and the storm was long gone by then. Absolutely absurd.

I sit at home sometimes and just grit my teeth when listening to their comms. It makes me sick because I know some good people that do their best to be good dispatchers, but their hands are so tied they can't even #$*% without somebody elses approval.

The bad part is the general public thinks they have someone looking out for their safety in the middle of the night that will protect them from all dangers. It is sad to say, but they are a misguided bunch.

Wow, I kind of jumped on my soapbox. Sorry for the tirade...back to scanning.

Everybody have a great week and enjoy the sunshine.

Jeff, no issue at all cloning ID's. You can disallow an ID but if you program two radios with the same ID it all looks the same to the dispatcher, at least on EDACS and older Motorola systems.

Hi Jeff and the List,

Scroll down to March 20 on my site below, and there's some info on it.
http://www.bensware.com/firetrucks/dfwfireapnews.htm

Ben Saladino

>This morning (Friday, 11 APR), the Richardson FD dispatcher was having trouble with a stuck mike on Rescue 4, which was on a call. They kept saying it wasn't them. Turns out it was communications maintenance in the city garage working on the radio in the "new" Rescue 4.

Anybody know anything about the details on this? And what about programming two radios in a system with the same ID? I would've thought this couldn't be done (like trying to give a computer file a name that already exists in the folder - you get warned).

28020. Re: Weather Damage Last Night

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-11 22:17:03 UTC
From: KC5RHB
Topic: 28002 Message: 28020

Ok I couldn't help it, I had to jump on this one, since I did sit all night on the west side of Fort Worth watching it come in and seeing the multiple power flashes west of me (Chapin Rd and 820) like camera flashes.

Right when the winds hit, which was instant, no gradual wind increase, it was BOOM, I was recording about 60-63 mph winds on the anemometer before I had to jump in the truck due to horizontal stinging rain. All I know is when I was in the truck, the winds got stronger shaking my truck back and fourth. But the strongest winds lasted for about less than 5 minutes.

But here is my say on the topic. Wind damage is wind damage. Whether it's a Tornado or straight-line winds, the stronger the winds, the more the damage. And I'm with Mel, I don't know why everyone wants to say "Tornado". From a citizen, to so call not fully trained skywarn spotters, it seems certain people cant wait to say the word "Tornado". I would rather not say that word at all, makes my job easier.

Anyways, there's my 1/2 of cent to give. Looks like we get a break for a while.

The news was reporting that the NWS only recognized several tornadoes in the area. I would have to question that observation. I'm not a weather expert, but I have surveyed a lot of storm damage from the air over the years. I've seen everything from the cat 5 Jarrell tornado where the asphalt was literally sucked off of the road surfaces and slabs with pipes sticking out were the only parts left of houses, the mile wide Lancaster tornado, the Wylie narrow snaking tornado that destroyed a house on one side of the road and left the neighbor on the other side of the street with no damage at all, straight line wind damage and microburst damage. The damage I saw this morning while flying first over I-35W down near Alvarado where several houses were destroyed, a lumber company destroyed and 18-wheelers overturned on the freeway, Saginaw and north Fort Worth where multiple warehouses and residential homes north of 820 were significantly damaged, then to Valley Ranch area and up into

Carrollton where trees were uprooted, three antennas from an AM radio station toppled, and roofs ripped off apartment homes, a church and several warehouses. I would have to say those were all small embedded twisters. I just don't see how that kind of concentrated narrow corridor damage approximately one mile long could be the result of straight line winds. People in Plano were upset that the sirens were not blown. My response to that is get a weather radio and a scanner, stop waiting for the government (or some dude with perfect hair and bad tie in a TV studio) to look out for your safety!!!

Easy one there. Sounds "cooler" on the TV and radio,
because people associate more with "tornado" than
"straight line winds" or "microbursts". Remember all
the folks that thought when they saw the movie
"Twister" that was what it was really like? Problem is,
by saying "tornado" without CONFIRMATION OF A
FUNNEL IN CONTACT WITH THE GROUND makes
you look (and sound) like an absolute moron to viewers,
listeners, and storm spotters alike, losing your credibility
VERY QUICKLY. What they oughta' do is just throw up
the radar screen on TV, tell the weather person to shut
their piehole, and just rebroadcast SKYWARN audio....;),
the best "pros" in the business....I doubt an ENG truck
is out on an overpass getting pelted with baseball sized
hail, but you can bet somewhere a spotter or chaser is!!
(as the ENG truck is racing to the scene to film the
aftermath, after hearing it on their scanner!)....:)

Well, my opinion, the way this system was (very strong squall line) even if a violent rotating column of air, also know as "Tornado", haha, was present on the leading edge of the line, which does and can happen, there was no way to see it or confirm it. It was dark, the line was moving to fast. We had good electrical in the storm, and what I saw out west looked like your typical gust front, shelf cloud appearance. Unless the storm is a classic super cell, and your in that clear slot with a perfect view to see a Tornado drop, other than that is VERY hard to depict whether or not when your spotting to know if certain winds are straight line or rotation, especially at night.

Thanks for those who responded. First, I'm not critizing the NWS, just wondering how they make their assessments. I've taken several Skywarn classes and I don't remember them showing damage photos of straight line winds vs tornados, but its been a while since I attended one. Pictures are nice, and you can get a general idea of what happened looking at the damage from ground level, but flying over it gives the viewer the total picture. Even viewing aerial footage from a broadcast quality gyro-stabilized camera doesn't give a person the total picture, it just has to be seen with two eyes. From my understand, some tornadoes can remain relatively invisible until they have had come into ground contact and had enough time to pick up ground debris, and if they are imbedded and nobody sees them it doesn't mean they weren't there. Kind of like the tree falling in the forest, even though nobody is there to hear it fall, it still makes a sound! So my final question to the group is this; can straight line winds concentrate into a narrow corridor say a hundred yards wide and create significant damage for about a mile in one direction leaving a significant debris pattern? Because if straight line winds can't do that then some of the damage I saw Thursday morning was definitely the weather phenomenon that apparently is a dirty word and folks don't like to use and other "non-experts" are criticized for using!

To answer your question, YES, they can. Search the NOAA website for damage assessment, the new EF scale, straight line winds, derechio, etc. You will find numerous papers. Also, the damage assessment team includes engineers and other folks who have a wealth of experience which far surpasses the novice.

28031. BCD39T - Version 2 Firmware - a couple of questions

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-12 23:48:38 UTC
From: Chris Easley
Topic: 28031 Message: 28031

I was just wondering if anybody else has gone through the process of applying the Version 2 firmware to their BCD39T.

My question is, (to Mr. Opitz in particular) why such a lengthy process to get to the download link for the new firmware? You now have to go through at least a 6 step process, before Uniden will even give you the download link.

And what's the purpose of having to obtain a ESN and check-sum number?

I'm not complaining, mind you. But it seems as if Uniden has gone to great links to protect this latest firmware release, but for what reason??? In the past all you had to do was create an account with Uniden, then go the downloads section, and bang, their was a link for the latest firmware.

Again, this is not a complaint, as the whole process was quite easy to do. Is version 2 such a big deal, that one must jump through hoops to acquire it??? Easy hoops, yes, but still a lengthy process.

PRO-96 for sale - $300 (preferably cash).
Owners manual, stock antenna, and Radio
Shack computer data cable included.
Pre-loaded with trunked systems around
the Flower Mound area, and numerous
conventional frequencies, or I can clear
memory - your choice.

Also, PRO-2006 - $50

Volume control numbers have scratched
off with use (4, 5,6, 7, and 8 are missing)

Also needs backlight replacement, as LED
is very dim.

Other than these two needs, performs
beautifully.

Please contact off-list if interested.

Chris,
I updated my 396 last night. No problems with the update process (and unlike certain nay-sayers on other forums, I did not expect any). Probably will do the 996 in the next day or two. It does seem to scan through the trunked systems at a faster clip.

As to why the many hoops to jump through to get the update, part of the answer was in the initial announcement posted <http://www.radioreference.com/forums/showpost.php?p=739820&postcount=1> on RadioReference. (Paul has also posted over there that he will be out of the country, on a trip to Hong Kong & Japan for the next 5 or 6 days.) Uniden wanted to establish the ESN validation process for 'major updates', so that, in the future, they could possibly offer updates, for a fee, that would add additional features not originally present in the scanners, particularly the BCD396T.

Despite the wild speculation that ensued in the initial announcement thread, there was never a mention that ALL updates would be fee based, only those that added features not originally designed. This V2 update is a 'bug fix', so that the scanner will operate correctly on the systems that it is supposed to monitor. By my read (and I could always be proven wrong, I suppose), that type update would not be fee based. An update for re-banding, presumably, would also be free. Re-banding support was promised from the outset, & for Uniden to renege & charge for that would be a public relations black eye in the scanner community that no amount of makeup could cover.

Seems like there was a case involving Apple a few years back. They were providing updates, at no charge, that added features or functions to certain Ipods. That put them in conflict with certain accounting practices (or was it SEC regs?), that said that this 'added value' to units already sold, & that had to be accounted for by either a charge against earnings, or the updates could not be free.

For those that haven't looked, there's yet another speculation thread <http://www.radioreference.com/forums/showthread.php?t=102795> on RadioReference, with what sort of fee-based updates people would like, & what they'd be worth. For the 396, Close Call Do Not Disturb, Temporary Lockout, and Multi-site trunking are among the contenders. NAC decoding has also been mentioned, though I suspect that's beyond the unit's hardware capability, regardless of firmware (would be nice; but that's why I bought a PSR500).

Same here. And all firmware, DSP's
and other support has been free from
GRE.

This is my final comment on this. When I said wind damage is wind damage, I was leaning to the fact that most of the general (un-trained) public doesn't know the different types of winds that can come from a thunderstorm. When we have thunderstorms with very strong winds that do moderate to severe damage, the general public automatically "assumes" it was a tornado even when they didn't see one. And in some cases they do turn out to be EF0's. But in some cases, like last week, straight-line winds can do just as much damage as a low end EF0 or EF1. I just hope thatâ☐☐s it for the season, even though we still have May and parts of June to get through.

From: letarotor
Topic: 28002 Message: 28041

After doing more research on the subject, I have concluded that the damaged areas I observed from the air were in-fact caused by straight line winds. The debris patterns were straight in line with the direction of the damage path, not strewn about in all directions. What I find interesting is that the paths were so narrow, which I suspect is caused by the winds tendency to follow the path of least resistance such as flowing water. However, during my searchs I was unable to find any articles or research on the matter specifically talking about the width of most straight line wind damage areas. If anyone can point me in that direction I would be most appreciative. No doubt we will see more storms like this before the humid summer hot box sets in on us!

Date: 2008-04-15 23:55:55 UTC
From: tajens2001
Topic: 28042 Message: 28042

I've downloaded the latest firmware updates for my bcd396 and kept up with updates for the br330 and bc296d. Is this all that is needed to reprogram the scanners for rebanding or will there be future updates to make this possible? I'd like to start putting the new frequencies in along with the old ones so the "Big Day" doesn't come as a surprise but I don't want to be wasting my time.

Thanks
TAJ

I must have been getting some bad interference
on .94 as I didn't hear a peep from Tarrant
RACES or Wise Co throughout the whole event.
Denton Co was blasting in though on .92.

I'm not a ham, but I have heard that "some" RACES
nets turn off the CTCSS during wx emergencies
to allow ALL spotters to access, in case they have
forgot the tone. Not sure if this is true or not.

Nope.

The FCC requires narrowband spacing (2.5KHz) by 2013. The date for ultra-narrow is currently set at 2018, but will probably move/not happen. 2.5Khz dev can easily be accomplished in analog.

TSIEC has mandated P25 for the state interop channels by 1/1/2015.

However, there will be a slow conversion to digital over the next few years. You'll probably see several of the trunking systems go once we get past the rebanding fiasco. At this stage, I wouldn't buy an analog-only scanner.

28051. Industrial Repeater Freq Offset and Tone Info

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-18 15:46:52 UTC
From: tgray04
Topic: 28051 Message: 28051

Is it possible to look up an industrial / business repeater frequency and determine the input frequency or offset and tone requirements? I checked out the FCC Callsign Information interfaced through RadioReference, and the ULS Licensing info found on the FCC website and didn't run across that particular info.

Thanks,

Ray

Hope to see ya'll at Belton!

To add to T Jr's nice explanation, get prepared,
save your dough, or purchase a brand new
GRE or Uniden scanner, or if you know
how to program and operate, and money is
no object, get a real Moto Astro unit.. By
having one (or all of these), you'll be far
ahead of the rest of the gang as public
safety catches up to the required mandates
from the FCC. The way government in
general moves like a slug, I think you'll
be quite safe.

Personally, I'd recommend the GRE....this
is one hell of a scanner! I've only started to
scrape the surface of its capabilities, but what
I'm seeing and hearing (along with Win500) is
VERY impressive!

Certainly not to put down the Unidens and O-Man,
as these are fantastic radios as well. But each unit
caters to different users, wants, and needs.
Determine first what you want to listen to, and
then your needs (such as NAC, digital, alert
capabilities, sensitivity, etc) and go from there.
I went with the GRE because of the NAC decode
(since I listen to a lot of federal stuff) and the
sensitivity of the unit when I heard Mark Colborn's
at one of our scanner meetups. I just "liked" it better
than the Unidens.

Just like I've stated in previous posts, while I
personally may only use 20-30% of the total
capability of my GRE, the added 70-80% extra
is very nice to have should I want to expand my
listening options.

From: Sarge
Topic: 28053 Message: 28053

The Feds can scream and yell digital/reband all they want. The Counties and smaller cities will then scream and yell where do we get the money for bases and mobiles. Some are still low band and many, many are hi band.

The Feds will have to be goaded for grants and how happy will they be to do that? Money can be added to the back door of other municipal grants, but even that will become less likely as the economy tightens up more and more.

Prepare yourselves for the coming hard times.

Sarge

The FCC doesn't care about tones. They aren't part of the license and aren't included in the FCC database. It should be easy to find repeater inputs. They will have only mobile and fixed stations (MO and FX) and no repeaters (FB2).

The only standard offsets are on UHF, 800 and 900 MHz. If it is a VHF system with multiple frequencies with the same calsign a lot of times you can't tell by looking at the FCC data which frequencies are paired.

Wellllll, not all true. The unrebandable radios will be replaced by Motorola during rebanding, at NEXTEL's expense. Part of my job in the city is the logistics to this end. This is all part of the NEXTEL movement, facilitated by a Squires and Sanders Law Firm. The law firm tells me (in the case for Rowlett) what is to be done, and I verify that it is happening,,,,however slow. Right now, we are awaiting the settlement of some legal wrangling by the City of Garland. Just had a meeting on Tuesday about that subject.

In reference to another post earlier about all of the entities going digital, it would be a good idea for interested folks to go to the State web site and get a copy of "Texas Statewide Interoperability Channel Plan (TCIP) Be sure to get the latest revision (I am using "Change #6" as I write). Toward the back of the document, you will find the frequency charts which are in affect until 12/31/2012 and which ones change on 01/01/2013. At present, this deals strictly with the interoperability (NPSPAC) band plan.

If we can get these documents and read them, it will stop much of the speculative bull which we see on these different interest groups. I know some of you do not listen to my explanations, and rebut them. However, in the end, if I am not correct, the licenses for the cities that I am "license manager" for, would be in jeopardy.

As I said in a previous post, getting government
entities to move fast with things is like getting a
slug to win the Indy 500....LOL

> If we can get these documents and read them, it will stop much of the
> speculative bull which we see on these different interest groups.

Not speaking for others, but I appreciate your
input (as well as clarification) on the issues.
Whether we like it or not, digital and rebanding
is the wave of the communications future. It will all
be up to the individual agencies with their budgets
whether or not they progress like a slug or a bullet
train. Rather than complain, save your money, or
purchase a digital capable scanner that has the
ability to be upgraded for new channelization and
rebanding.

Remember when trunking first came along?
If you do, you remember well how monitors
thought the world was going to end because
the rumors were flying that trunked systems
couldn't be monitored. Well, we proved the
naysayers wrong by first programming in the
trunking channels, and lo and behold, we COULD
listen to police and fire (although at the time we
ALSO were forced to listen to the dog catcher and
sewer cleaner). But, as time and technology
progressed, and the "trunktracker" scanner
came to the world stage, we could program in
the "talkgroup" and "scan list", and by George,
hear nothing but those fire calls that we so
desperately wanted to hear, just like the firemen
heard on their units in their apparatus radios!
And from that point on, there was joy to all. LOL
My point is, don't lose faith Sarge. Until all is encrypted,
which it isn't yet (and will take YEARS, if at all) there is
a TON to listen to. All is not lost my friend. And in
reference to agencies equipment and upgrades,
there will be those that can afford the Cristal, while
others can only afford the Boone's Farm.....:)

28060. Re: [dfwscan] Digital and money

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-19 12:27:56 UTC
From: Henry Lucas
Topic: 28053 Message: 28060

Oh it even gets better - I used to do systems engineering for DoD, FAA and other fed customers. When you 'convert' to digital data, typically you have to increase the number of repeaters, and their output power substantially. The reason is that reliable operation of a digital or trunked network requires more signal level than analog. The manufacturers dispute this - Rotomola is notorious for screaming: 'Range equivalent to clear" (for privacy), and "Range equivalent to analog" for straight digital.. but it's just not true.

WIth an analgo system, you can tolerate occasional signal dropouts. With a digital system - those are fatal in many cases. Particularly on a trunked system, when you are getting the frequency assignment from mother (net control), one bad bit will have you listening to taxicabs rather than your own talk group. Eventually you WILL return to the control channel.. but when it's 'shots fired.. officer down...'.or, 'we're taking fire.. send backup ASAP'.. taxicabs are NOT where u want to be! Nearly everyone who has used LMR has had the experience of keying squelch to send data: dispatch: "211, if that's you.. break squelch twice.." 211: "brrruuzzzp.... brruszzzzp"....

You've done it .. i've done it.. everyone has done it.. with digital you CAN'T do it.. Why? Because if the 'channel' (RF path between dispatch and portable/mobile) is so bad that you can't pass digital data with low error rate (and this is a higher quality channel that is required for marginally ok analog audio), you can't open the squelch on the target receiver! That's why people say... "Why digital sounds so CLEAR!" Yeh it does.. because you don't hear the noisy traffic at all... You hear silence... That makes the dispatch desk nice and quiet.. but it's no help to the guy or gal being shot at in the field..

To prove the truth of this - consider the following: The transmission of a data bit is NOT guaranteed. There is always some probability of error. Lets say that the Pe is .2 - therefore the Pc (probability of correct bit transmission is .8 (1.0 - .2) What is the liklihood of recieving one bit correctly? Why .8 of course. How about 2 bits? The events are

'disjoint' i.e. not dependent - so it's the product:
.8 x .8 = .64 How about 3 bits? Ok.. .8 x .8 x .8 =
.512

Now consider that the trunking frequency to switch to
(or the digital squelch word) contains quite a few
bits.. and the digital audio contains LOTS of bits..
The longer the string of bits in a digital word, the
lower the liklihood that it will be received and
decoded correctly. Hence.. you need Pe numbers in the
10^-4 or 10^-6 range.(that is .0001 to .000001 Pe),
and that takes LOTS of signal power! So just buying
digital radios is only the start of your money
spending activities...

Cheers

Thanks for someone finally explaining this in
laymen's terms, so us not so technically
minded can understand...LOL

So basically the digital data stream removes
the background "noise" of analog....interesting...
But to keep that nice "clean" sound, output power
at the transmitter has to be increased to maintain
a constant noise free data stream....am I following
this correctly? So not only will the transmitter have
to be converted to digital, and the old one can't just
be "upgraded", output power will have to be
increased as well. Time for Mr. Moneybags.....:)

The main reason for digital is they can fit more crap into a 5 pound bag versus analog. The feds want to free up more of the radio spectrum so they can pimp out the additional space to other things.

As far as the quality, think of it this way using TV as a comparison:

With an old analog TV, The picture with a good signal was fine. However, a weak signal meant a snowy picture and raspy sound -- you could still watch the show though.

With digital TV, the picture and sound is awesome, but a week signal means a screen full of digital noise and choppy audio, or no picture and sound at all.

28063. FORT WORTH 145.940 REPEATER

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-19 16:12:31 UTC
From: wb5jhr
Topic: 28063 Message: 28063

Hello All

FYI The 146.940 repeater TX (output) PL tone has been turned off
and will probably stay off for some time. PL will still be required on
input (146.340)to use the repeater as normal.

This was done because a low level signal on input(146.340 mhz)
is mixing causing the TX to lock up and create that bad echo like audio.

With the TX PL encode turned off the repeater is usable but some weak
signal's trying to hit it may notice a little noise along with their
input.

Harold K5SXK is looking for the interference.
Once the problem signal is found the TX PL ENCODE will probably be
turned back on.

Thanks

28064. GRE PSR-500 Signal Sweeper

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-19 17:14:18 UTC
From: Blaine Brooks
Topic: 28064 Message: 28064

Ok, all you GRE gurus on the list.

What have you found are the OPTIMAL
settings for the Signal Sweeper function?

I have Win500 which can access the
"extended" functions and features easily.

So far, I have been disappointed with this
feature. I put my FRS radio right up to the
antenna, and it did not detect any signal
whatsoever, which I think is pretty pathetic.

I put the GRE on a bookshelf, turned up the
volume on the Signal Sweeper, walked a few
feet away transmitting on the FRS....and still
it did not pick up anything. Turned the attenuator
on and off. Didn't make a difference. Still nada.
What am I doing wrong?.

When I hear of folks having great success with the
PRO-97 Close Call (such as snagging a milair jets
a/a tac as it was flying nearby), I wonder if the
"defaults" are not set as sensitive as they should be
on the GRE, or if this function is "not as hyped, or
advertised".

From: Tom ND5Y
Topic: 28053 Message: 28065

Theoretically that is right, but you can't just "upgrade" existing
equipment to P25. You would have to buy all new equipment unless you are
already using P25 capable radios strictly on FM.

There is no "white noise" on a weak signal like on analog FM but if real
P25 radios are anything like a BCD396T or a digital cell phone, they
make up for it with all the artifacts and crap from any background noise
that is present. Somebody in Wichita Falls has a crossband patch on VHF
from the Fire Dept talkgroup on the 800 MHz ProVoice system and it
sounded like crap. It was as bad as my 396 on P25.

I am still waiting for somebody to address the issue of what happens on
high band (where there are no standard repeater pairs) when you have a
P25 base station or repeater receiver that is 12.5 kHz bandwidth and the
adjacent channels are only 7.5 kHz away from your receive frequency.
Won't the adjacent channel signals wipe out your receiver since they
overlap? Does P25 modulation have capture effect like FM? What if
another base or repeater that is 50 or 100 miles away is on your input
frequency or +/- 7.5 kHz from it? Will you still be able to hear hand
helds and weak mobiles?

I don't think anybody increases power when they switch to P25. It
usually isn't possible. Especially if you already have 110 W mobile radios.

That's right. we did fairly extensive testing (about 6 months worth) - both in the lab and in the field. We staked out a local shopping mall - and walked around testing various modes - we had Rotomola radios that were set up to use both bandwidths, as well as analog, straight digital, and 'privatized' digital. We had small masking tape labels hidden about - indicating the range on previous tests. This was before 9/11 - today they'd arrest you in an instant for doing this. I noticed the shopping mall security types observing us, but they never asked us what we were doing. I guess they figured we were nuts but harmless.

You CAN pass usable analog speech with a C+N/N (carrier plus noise/noise ratio that would produce about a 10% bit error rate. Recall that the C+N/N ratio is set by the transmitter gain, receiver sensitivity, antenna gains, and path losses between the Tx and Rx. The C+N/N is totally independent of the modulation being used. Now for a C+N/N channel that would produce about 10% errors - it's noisy, but usable in analog. It is POSSIBLE to get some intelligence thru at nearly 20% errors - that is an analog signal in a C&N/N channel that would produce about 20% errors if it were switched to digital. With the 20% equivalent channel - you are at the point that you really need PLSO - phonetic letters spelled out - Kilo, Hotel, India, Mike, Five.. etc. You cannot pass (at 20%) the classic 'synaptic rhyming test' of distinguishing words such as : fine, line, pine, mine, try, my, fie, etc. Again, we're talking about analog modulation here. I don't believe any digital systems on the market today would run at 20% errors in the raw channel. Correcting 20% with an error correcting code would really be a job - something like correcting the NASA pictures from deep space probes. Those have so many check bits on the data, that the data thruput is on the order of bits per minute - hardly suitable for voice - where you need 8kb minimum for reasonable quality LMR. Cheers
Rab

Heh, heh.. i liked the 'pimp out'.. that's good!

I used to work commercial satcom. There were several companies peddling digital 'compression' schemes for television video. On a normal C band transponder - you can fit one channel of 'broadcast quality' video, or two different channels of 'industrial video'. Industrial is like CCTV - security cameras and the like. That is good enough for things like the 'cattle channel' - showing pictures of cattle up for auction in feed lots, but not good enough for the NBC evening news. These 'digitizer' companies were promoting squeezing 3 or 4 broadcast quality pictures onto the normal 24 MHz bandwidth transponder. They were soliciting peeps like 'TMC - the movie channel, HBO, Cinemax..etc. The potential customers were wary (because the $outlay was huge). The vendors kept demonstrating their boxes with 'talking heads'. The way these boxes work, is that they only send the information in the picture that has changed.. hence the required bandwidth is much lower if most of the picture stays the same. For talking heads it does - clearly.

The potential customers proposed their own test. A tape was made. Someone knowledgible took a wideband camera to a Maine lake in the fall.. and recorded a bunch of aspen trees on the shore of a lake. A stiff breeze was blowing.. all the leaves were frantically dancing and changing colors rapidly. The analog tape was run thru the digitizer system.. At first, the picture was ok.. After a second or two, large black blotches appeared in the picture. They got bigger and bigger over about a second.. then .. BLACKNESS.... The system had crashed. It couldn't keep up.. TOO MUCH was changing in the picturte to send it to the other end in the restricted bandwidth channel. This was instantly named an "Aspen Test". The potential vendors left.. tails between their legs.. the potential customers felt vindicated. Things have improved since then.. but you still notice black holes appearing when the channel error rate is high.. same reason.. can't get all the data to the other end.
Cheers.. Rabbit

28073. Hughes Sat system

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-22 15:36:21 UTC
From: Sarge
Topic: 28073 Message: 28073

Thanks Yall,

Yes the Hughes antenna and amp might work with FTA. However, the ant/amp gets its working power via the coax from the receiver. I would need the ant/amp power requirements and the FTA receivers ant/amps coax power out to match up. Does anyone have any more info on this?

I will do a web search and see what I kin found.

TIA, Sarge

28075. Thales "Liberty" handheld radio for interoperabilty

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-22 22:33:04 UTC
From: Bob Tickner
Topic: 28075 Message: 28075

This may be old news, but I discovered it today in a magazine advertisement. Looks like this company is producing a radio for full interoperabilty.

The Thales "Liberty" is designed to meet stringent public safety specifications. It is a single, easy-to-use radio that provides all modes standardized for public safety use including Project 25 (P25) conventional, P25 trunked, and legacy analog. Liberty offers Data Encryption Standard (DES) and Advanced Encryption Standard (AES) encryption with Over-the-air Rekeying (OTAR) and all of the typical features that are available in LMRs today. The radio?s Mil-Spec metal housing is submersible to two meters.
?The ability for all government agencies and first responders to be able to communicate with each other any time over all public safety bands is crucial to the safety and security of our nation,? said Mitch Herbets, President and CEO of Thales Communications. ?We have leveraged our proven expertise in software-defined radio technology for the military into a no-compromise solution that addresses the interoperability challenges of the public safety community.?
Thales Liberty handheld all band all mode radios.

From: rob.davis@armynursecorps.com
Topic: 28075 Message: 28076

Thanks, Bob. I had not seen or heard of that before. I want one!

That's a little ballsy to tout it as "all mode" when it doesn't do EDACS or LTR though. Especially with the growing number of those systems popping up. I wonder if Ma/Com will license for it.

Rob

Thank you Don.

I'm 39, and still haven't figured out what
I want to do when I grow up.....LOL

Tim - Although I am not a pilot, I have
certainly flown a TON...:), and talked and have
been friends with numerous pilots.

My advice? Don't be a "learn at home" person
who gets a pilots license, so to speak.

Get out there and go to a local airport, hang
around the pilot shop and hangars, ...ASK
QUESTIONS!!!!!. Most pilots love to talk to other
pilots, or young adults interested in flying. I
warn you - be prepared for some "big fish"
stories, but soak it all in like a sponge and
smile. Invest the time and MONEY into a
good aviation ground/air school. It ain't cheap!
(One of the reasons I've never done it-LOL).
Expect to invest about 5K for a GOOD school
(maybe more). Take tons of weather classes
that are offered in the course of your
education. Believe me, you will need it.
Make sure your flight school gives you the
complete package. Don't do a "fly by night".
You want to be 100% sure when you strap
yourself into that craft that YOU are confident
in your abilities to take it off from terra firma,
and bring it back in one piece to terra firma.
Airplanes can, and WILL, get you killed. And there
are PLENTY of idiot pilots out there, just like
auto drivers.

Your best place to get books and supplies are
at a pilot shop. Monarch Air is at McKinney,
and Lone Star Pilot Shop is at ADS. Of course,
there is always Sporty's on-line, or drop by
your local Borders or Barnes & Noble.

That's good advice. I would also suggest working at an FBO even if it's part time, or at least hanging around one. You will meet a lot of pilots, which may lead to information on good instructors and aircraft owners.
Also FBO's usually have several Aircraft/Pilot magazines that are free to take.

I'll tell you what gets old. He KNOWS that this is off-topic and not appropriate for this mailing list. Sticking "OT" in a teaser topic line that doesn't tell us a damn thing about his post doesn't make it okay to post off-topic crap. Off-topic is off-topic, and it is always inappropriate for this list. He knows it, yet he continues to intentionally break the policy. Why? Why is it allowed? Isn't that what we created the Tavern for, to keep this list free of his nonsense?

This "kid" is not a kid anymore. In fact, he wasn't a kid when he showed up here four years ago. He knows all about the Internet and how to use it. Unfortunately, he knows even more about how to misuse it. So, instead of using Google or Yahoogroups to find a bunch of pilots to talk to, he tosses out a bomb here with the specific intention of creating a stir. It amazes me that anybody could not see that, or would defend it.

I tired three years ago of "bashing" him for his silly quest to jack all trades and master none, and fund it all by selling the stuff that people gave to him. That is no longer the point. The point is that he is contributing NOTHING to this forum regarding the hobby of scanning. Period. I don't care if it is flying, firefighting, EMT, photography, or sirens and flashing amber lights... IT'S OFF TOPIC! TAKE IT ELSEWHERE!

For the love of all that is holy, how hard is that to understand?

EDUCT (Ellis, Dallas Unified Cooperative Team) is currently discussing switching to a trunked system at there meetings. However no exact type of system has been decided on, The cities of DeSoto,Cedar Hill, Duncanville, Ovilla, Glenn Heights, Red Oak and Midlothian would all use the system all types of trunking systems have been discussed in the meetings but nothing has yet to be set in stone. My neighbor and best friend is a Lieutenant at Glenn Heights FD and attends the meetings regularly. I will update the group when more information is received the only things that are known for sure at this time is that it will not be any type of system that we all wont be able to pickup on our current scanners, so no ESK or anything like that.

28094. RE: [dfwscan] Re: Desoto and Cedar Hill going to trunk system?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-24 22:33:22 UTC
From: Terry
Topic: 28084 Message: 28094

Interesting. My rumor mill reported that some of the radios were already here for the Duncanville, Cedar Hill and Desoto. They were supposed to be Kenwood's. I had heard MPT-1327 as well. If indeed they have Kenwood radios it would mean MPT, Passport, LTR or conventional.

Terry

Well, that throws a monkey wrench in there
with Waxahachie recently making the transition
to the ETMC system, and ETMC planning a digital
move soon.

Wonder how this plays into the ballgame? I doubt
they'd just throw out their new radios, and money
spent to go to YET ANOTHER radio system,
especially one with a NEW PROTOCOL. If I had
to WAG it, I would say Moto would be the best bet
for this new system. P25.

Sounds like a political & communications
CF to me.......LOL

Roughly, an FBO is to airplanes as a gas station is to cars. As the wiki describes, other services are usually offered also.

The main issue is that rebanding is still in progress for this region and I cant forsee anything moving forward until all that is taken care of. I have not heard the rumor of ETMC going digital but with all there sites and radios they have in service now I can just imagine what kind of cluster that will be. As someone who has operated a trunked system for over two years now my first response would be dont go trunked its a pain I recently attended a rebanding meeting in Denton Co. every fire chief there wondered who ever talked them into going trunked in the first place. SWRCC proably has the combined resources to purchase radios and switch over but departments like Red Oak and Glenn Heights are gonna find it very hard to be able to have the kind of money on hand to switch all those radios over especially when your talking about a handheld VHF radio costing 200 to 300 dollars versus a Trunked handheld costing upwards of 4 to 5 thousand dollars. They
serve there purpose in some instances but sometimes it just comes down to if it aint broke dont fix it...

What I was thinking was that they would go together as the EDUCT and try
to get a grant to get a trunked system that all the cities would share.

From: Patrick Wrigg
Topic: 28100 Message: 28100

Anybody know whats going on at Oates & N.W. HWY on the Garland / Mesquite boarder.
Got a call from a friend who said several constable cars passed him at a high rate of speed. Then he drove by an apt complex near there and saw, Garland PD, Mesquite PD, DSO and Dallas Constables there.

I have my scanner on Garland S1 and havnt heard anything.. but might be to late since it happened about 15 minutes ago..

If they are sticking around in the VHF band, rebanding is not an issue and thus not a hinderance to their overall implementation plans. All you'all are trying to apply waaaaayyyy too much logic to this whole situation. Doing what makes sense has never been the strong suite of any government organization. Dallas's new CAD system is a prime example. Now they will have to spend twice as much as they would have originally to get the equipment that was necessary to make it all work correctly, and nobody down in City Hall is going to be held accountable or fired. Making sense would be getting a communications system that everyone else in the area has, not something totally brand new that aside from the VTAC Inteop channels is totally incompatable. It may have all boiled down to money, and LTR and MPT1327 systems are much cheaper than Moto or Ma/Comm trunked systems and the specialized radios that are needed to work on those systems. And the group has probably been sold a bill of goods that no-body will be able to monitor them, which is essentially nearly true. We shall just have to wait and see.

For the record they have several new frequencies licensed on UHF. I received information reference the model number of the radios believed to have been purchased. Those Kenwood radios are UHF and will do conventional, LTR and MPT1327. Time will tell but every indication I'm getting is at least the cities of Desoto, Duncanville and Cedar Hill are most likely going to be on UHF and MPT1327.

28105. Off Topic: For Fire Apparatus Buffs

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-26 12:42:07 UTC
From: Ben Saladino(YG)
Topic: 28105 Message: 28105

TFM Members/Friends:

Texas Fire Museum is holding their 17th Annual Muster on Saturday, May 3, 2008. The show will take place at Fish Trap Park in West Dallas which is just west of the Hampton and Singleton intersection and runs from 10:00 a.m. to 3:00 p.m.

We plan to grill dogs again at this year's event due to the overwhelming positive response we received on last year's lunch. Chips and drinks will be provided as well. The donation can will be set up to pay for the rations.

Muster prep will commence on Monday, April 28. We will certainly appreciate help in getting out the equipment and loading said equipment for the muster. There will be members here during the day and into the evening getting ready for the muster.

Apparatus Owners: if you plan to take your rig to the muster, it is your responsibility to get it ready for the muster. If per chance you are unable to get your truck ready or it needs service work of some sort, please contact us no later than the close of business on Monday, April 28, to make these arrangements.

We will begin moving trucks around 8:15-8:30 am on muster day. The working vehicles will be moved first followed by the static vehicles.

We look forward to a great muster and your participation in one of the museum's signature events will be appreciated.

28107. Huge fire at $2mil home in Arlington...

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-27 04:14:48 UTC
From: Andrew
Topic: 28107 Message: 28107

I happen to live about 1 mile away and went to check it out..
Unfortunately, I don't have the correct media credentials so they kept
me back. I am a photographer and would have liked to have shot a few
journalistic shots, but was turned away. The house was on a very
large plot of land and surrounded by a private street/entrance. From
the public street I was pretty limited. I actually was driving home
and smelled the fire...turned scanner on and then almost immediately
saw the flames/smoke. After dropping the kids/wife off at home, I
went back...by then the PD/FD has it pretty much blocked off for the
most part.

The owner was out front at the gate. Sad to see anyone lose their home.

They are still working it.. Arlington South Talk Around if interested.

28109. Pro 2067 Vs Pro 2055 ?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-28 03:57:55 UTC
From: Code 3 Productions
Topic: 28109 Message: 28109

Pro's? Cons? I have a 2067 right now, but am contemplating a pro 2055, as it has backlit keys, is computer programmable with Win97 and has signal stalker.

Those are the only main differences Im aware of, that and the different color displays.

I havent decided if im going to sale the 2067 and or trade it, towards a 2055, or keep it and get a 2055 seperately as well.

any advice on the matter is much appreciated.

If you have a 2055 you are interested in getting rid of let me know, a local transaction would be better than ebay.

Tim, KE5PPL

28110. Incident in Coppell?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-28 22:50:09 UTC
From: Blaine Brooks
Topic: 28110 Message: 28110

Not sure if some type of drill or what....

Ops on Ch 3 Coppell FD

From radio traffic sounds like some type
of technical or trench rescue. Unknown
location, but command post set up. Radio
advises units are over one hour into the
incident. Haven't seen anything on IPN
or the local news.

Anyone know?

Blaine,

Yes Coppell was conducting a drill today. They are doing trench trainging or have been doing trench training for the past couple of days. I think they are doing this in conjunction with Lake Cities as well.

28113. Fort Worth Incident?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-29 05:17:40 UTC
From: Bill Boyer
Topic: 28113 Message: 28113

Didn't have the scanner with me this evening -- wondering if some one caught what was going on. Up on Beach street just north of I-30 the FWPD DOT pickup and a couple of hazardous waste trucks were dealing with a tractor / trailer that had a leak or something. Saw it about 10:15, and at 11:30 they were still dealing with it. Looked like a flatbed with a couple of rectangular tanks and some pallets of bagged chemicals.

Yes but didn't have those kind of results! It would be cool to know if those back-up cameras are 2.4 Ghz or somewhere else. My receiver is 2.4. I found quite a few security cameras and such. Guess I'll have to dig my device out and take another look.

Hutton sells them. www.huttononline.com
They are located in Carrollton on Midway i think.
They have a will call area so if you call in an order and pay via CC
you can go pick it up.
That is the way they used to do it a few years back.

I think Hutton in Carrollton will still sell stuff at retail to walk-in customers. If so they will likely have what you need. For the record I'd look at Larsen: http://www.radialllarsen.com/ or Maxrad stuff over Antenex. I've only owned a couple of Antenex products and that was enough for me!

Wrong assumption Ben!! We have our latest rookie class set to graduate next month and they are in the finally weeks which includes ride-outs. There are several reserve engines (identified as Attacks) that have been placed in service with training officers and a group of recruits. They are free to respond to any call, the idea being to expose them to the day-to-day real world experience. This will last for another week or so.

I started searching after I saw the article, and all of them that I found were 2.4gHz. I guess it's time for one more antenna hole in the roof! I've had this void in my life ever since they digitalised cellphones. This could be just the thing I need, haha!

Speaking of the new recruits, according to star-telegram, those
recruits were the ones who pulled the elderly lady out of a burning home.

Story:

http://www.star-telegram.com/804/story/613885.html

28126. FWFD Attacks

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-04-30 21:05:51 UTC
From: Greg Higgins
Topic: 28126 Message: 28126

As additional information regarding our Attack trucks (see previous message), the way they are numbered is by the district they are in at the time. If they are running in Engine 2s' area, then they will be identified as Attack 2. If they are in Engine 24s' area, then they become Attack 24. This has to do with the new CAD system and lets everyone know where they are operating.

Active incidents where a squad has arrived at the scene, yes. Undispatched calls, no. Hopefully they will eventually include undispatched calls like Arlington so Dallas citizens can get an idea of how long it is taking their police to get the calls dispatched and an officer on the scene. A nice first step, but it has a way to go to catch up with Arlington's page: to include selectable pages for calls in each patrol division.

It has the calls broken out into the 7 divisions. It also has some "stuff" about calls holding not being public information! It is a huge step forward for Dallas but unless they invent a time machine I doubt they'll ever catch up.

I dunno. Doubling the number of emergency vehicles screaming across the city just to give some EMS exposure to a bunch of guys who will get more than enough experience in their first month on the job doesn't really add up to a smart, cost effective, safe, or necessary idea to me. We're talking about guys who are going to spend their entire careers with at least three other firefighter-EMTs at their side anyhow. It's not like we're preparing to toss them to the wolves and they need maximum exposure before we do so.

If you take a different approach, not saying you're wrong believe me I hate going lights and sirens to stuff that doesn't require it(selfishly for MY safety). However, would you want one of them to make a silly mistake on you or a family member in their first month because the other 3 FF-EMT's were busy with other things on scene? Again, I'm not taking a side here I'm just adding a different perspective. Besides before you know it they'll have to get on a Medstar unit to bail them out!! Anyhow there might be a better way to do it but I suppose that's up to the powers that be and not us here on the board.

I'm always glad to see how people with no idea about a subject can suddenly become experts!

First, there are only 2 Engines / Attacks being used for the ride-outs, not 65 (the number of fire apparatus in the FWFD, not including BC and some of the support units; i.e. EMS, Arson).

Second, granted most of their responses will be EMS related, they also make all other types of incidents. Guess you didn't see the news earlier this week when they rescued a person from a burning structure. Fortunately, fires are way down from not too many years ago and they more exposure they get know will benefit them and their co-workers in years to come.

Third, these ride-outs are part of their evaluation process that must be completed before they can go graduate; all part of the State requirements.

With your ideology, I guess EMT and paramedic students (as well as police officers, doctors, etc) don't need to spend time with mentors. Interesting thought process.

Suddenly? I was in EMS and fire before you were even out of high school, Greg. You obviously don't recall, but we even worked together in the early 80s. Funny that you would accuse Ben and I of making hasty assumptions. Oh, the irony!

You work with some of these new KIDS and tell me FtW doesn't have a better idea.
Most of them are totally lost when they get on a box because all the exposure they get is maybe 3 ride outs in EMT school. I really enjoy the ones that tell you that the only reason they are taking the EMT class is so they can get their fire cert, tells ya where their priorities are.....

28145. Parker Co/Weatherford Signal Codes

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-09 12:23:00 UTC
From: commscan
Topic: 28145 Message: 28145

Hi List,

I've been listening to Parker County (primarily Weatherford) agencies again lately and noticed the signals (i.e. Signal 7 = burglar alarm) they use for most of their calls correspond to Tarrant County's signals. In Parker County there are some different codes, like Signal 54 which means drugs, but for the most part they seem to be the same as Tarrant County's signals. Does anyone know if this is a recent change?

In past years, I tried keeping a file of the signal codes used in Parker County. At that time, there were few if any that matched up with Tarrant County's agencies signals. Every agency has their own additional signal codes they add on but the majority in Tarrant County are the same. And now, at least Weatherford is using the same signals as Tarrant County agencies it appears.

I guess my two questions are (1) does Parker County SO use the same signals as Weatherford PS and (2) has anyone else kept a record or have a list of the signals used in Parker County?

Thanks for any help.

Brian

28146. Slightly OT: Cell signal propogation onto audio

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-09 19:46:26 UTC
From: Jim Theisen
Topic: 28146 Message: 28146

Anyone else ever noticed this with their cellphones?

My cellphone (A Samsung SGH-D307) sends out a signal periodically that couples into any amplified audio circuits nearby. This isn't RF, it's honest-to-God audio frequency that couples in through a radio or even a CD player or bedside sound machine when the phone is placed nearby. It sounds like a growly "Buuuuhp - bup-ba-dup, bup-ba-dup, bup-ba-dup, bup-ba-dup, bup-ba-dup". I first noticed it on my car radio but it took me forever to figure out the source. Finally the other night I had the sound machine on my alarm clock going as I snoozed. The phone was sitting on the bedside table right next to the clock. All of a sudden out of nowhere came that hideous, loud "Buuuuhp - bup-ba-dup, bup-ba-dup, bup-ba-dup, bup-ba-dup, bup-ba-dup!!" I moved the phone away from the clock a few feet and the sound faded and stopped.

Wierd.

No, it's RF... typically, the RF is coupling with a poorly-shielded amplifier section, thus the noise. The TDMA nature of GSM makes things worse - a GSM phone transmits for 0.577ms every 4.615ms (1:8 TDMA), which is where the buzz/pulsing comes from.

My XTS will get the speakers in my office with no issue, but, since it's typical FM, it's not all that objectionable (no buzz). The Crackberries, on the other hand... I have certain areas that are "cell phone OK" to avoid deafening myself with the buzz.

If you pay attention to the pattern, you can tell when the phone is about to ring. Amaze your friends with your awesome ESP.

Terry

Very common on 800MHz cell phones like AT&T when the devices do their handshakes with the towers. The sound will come through all kinds of electronic devices, to include high end transmitters and scanners. Someone on this list I'm sure can tell us all the technical aspects of why it happens, but suffice it to say, its no wonder they make you turn off your cell phones on passenger planes when you fly (of course I'm sure I'll get arguments about that also). Was at a conference yesterday and the speaker was using a wireless microphone. He had his cell phone in his shirt pocket and received a call. He looked up at the ceiling with a stange WTF look at the speakers and shrugged. We told him he needed to answer his phone. He reached in his pocket, raised an eyebrow, said sure enough, threw it on the desk and went on with his presentation.

This evening, I am picking up what definitely seems to be an MPT-1327 sounding control channel on 453.3625, one of the frequencies licensed to SWRCC for their new system. It was not present Monday night nor last week through the weekend (did not check yesterday). No voice activity found, but I'll leave the scanner running on log/record to see what turns up while I'm at work tomorrow. Trunkview is showing an ID of 0D91 from the control channel.

Still nothing on the separate set of frequencies that Duncanville licensed
<http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2935552>
on their own, separate from the ones for the two-site SWRCC system.

28166. New Scanner

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-15 02:26:38 UTC
From: liesest
Topic: 2838 Message: 28166

I know there have been some message threads on this in the not too distant past, but I wanted to check to see if there are any new words of wisdom. I am ready to purchase a new scanner and based on those past threads am planning on buying a PSR-500.

Has anyone had any bad experiences with this radio?

Are there any online retails outlets that people would endorse or advise avoiding?

Do I really need one of the 3rd party software packages? If so, which one?
Thanks,
Steve

I don't own one so I can't speak to performance. However a place I've done business with and have been happy with is:

http://www.hamstation.com/shopping/index.php?main_page=product_info&cPath=52_173&products_id=1385

I just got hired over there at Southwest Regional and when I was touring the comm center they told me the system is a Kenwood 450mhz system. I will give the group more information once I get over there and get started.

Good catch, and confirmed. Running TrunkView on it now, getting ALH (General Single Codeword) and CCSC (Control Channel System Codeword or System ID 0D91) info. streaming up the page when selecting Filter option #5.

Sure hope they remember to put all the UHF interop channels in their radios when they program them up, or a patch to them in dispatch, or nobody in the area will be able to talk to them anymore.

This evening, I am picking up what definitely seems to be an MPT-1327 sounding control channel on 453.3625, one of the frequencies licensed to SWRCC for their new system. It was not present Monday night nor last week through the weekend (did not check yesterday). No voice activity found, but I'll leave the scanner running on log/record to see what turns up while I'm at work tomorrow. Trunkview is showing an ID of 0D91 from the control channel.

Still nothing on the separate set of frequencies that Duncanville licensed
<http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=2935552>
on their own, separate from the ones for the two-site SWRCC system.

Mark, does DPD have the interop channels or anything besides their 12 regular channels in their radios?
I have never heard anybody mention this and the last time I saw a DPD radio was about 1978.

From: hiegtx
Topic: 2838 Message: 28171

Steve,

The PSR-500 is a good scanner. One word of caution: Don't feed it with too much antenna if you live near cell sites or a cluster of repeater sites, like Downtown Dallas or Cedar Hill. When I got mine, I immediately put one of the Radio Shack 800mhz antennas on it. I found that I was missing some transmissions (near cell sites or repeater sites) that the 396, with the same antenna, picked up. The scanner can overload & desense.

For use around town, & in my daily commute, I've been using the stock antenna. Yesterday, sitting at the traffic light at Sylvan & Ft Worth Ave. (which is sort of down in a hole), I was picking up traffic on the Parker County P25 system, even though the scanner, with stock antenna, was sitting in a cup holder in the console of my truck. Not bad. Once I get away from the city's rf jungle, I switch to something with gain, usually a Diamond RH77CA or RH771, which are tailored for Vhf-high & Uhf. That's much more common where I travel out west of Fort Worth.

As to software, no it's not mandatory, but I'd highly recommend it. Especially when you're trying to text tag several hundred channels or talkgroup id's. There are three programs available: WIN500, PSREdit500, and ARC500. All three offer a 30 day full function trial period. Links to find them, as well as more info on the scanner, can be found in the RadioReference Wiki page
<http://wiki.radioreference.com/index.php/PSR-500> for the 500. I ended up registering both WIN500 & PSREdit. There were a few subtle differences, especially at the time I registered, where I liked certain features enough in each to purchase both. Try them all, buy the one you like.

Terry mentioned The Ham Station. I've never dealt with them, but they have an excellent reputation for service.

I bought my PSR500 from ScannerMaster. http://www.scannermaster.com/
I've also bought a number of scanners & other accessories from Grove. http://grove-ent.com/
I've gotten good service & fast shipping from both. The very few times there were any problems were handled immediately, to my complete satisfaction.

Yep Tom, we are finally out of the dark ages and actually are movin high speed, with relatively low drag, into the 21st century, no longer using a motorcycle radio! The transition was a little bumpy for some of our ole' timers, but they are finally coming around! Our new Technisonic TDFM-7000 quad module P-25 compliant and capable transmitters are programmed with all the latest NLEC/NPSPAC, UTAC and VTAC channels. Region 40 fire channels. DFW East and DFW West. Texas Law 1 thur 3, Texas Fire 1 thru 3 and Texas Medical 1 and 2 as well as all the normal agency (PD and FDs) within flying range. My feeling is if you're flying a two million dollar helicopter and can't talk to anybody, what good are you. I have actually been critized for putting in too much. Granted, we seldom get called far from home, but as in the case of Fannin County several years ago when we went up there to help locate a suspect who murdered four townspeople, it sure was nice to be able to talk to the Sheriff when we got there.

Yesterday I was hearing a MPT-1327 control channel on 460.0375 which from RR looks like the Cedar Hill Tower. I ran Trunkview on it for a couple of hours and got the ALH's as well as the CCSC's with a System ID of 0D99.

28175. Weirdness on Arlington Fire Channel

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-16 18:02:19 UTC
From: rob.davis@armynursecorps.com
Topic: 28175 Message: 28175

Anybody here listen a lot to Arlington Fire? If so, I have a couple of questions.

First, several times a day, I hear an Arlington Police patrol dispatch talkgroup coming through loud and clear on the Fire Alerting talkgorup (56496). It will always be for just one conversation, then it stops. It's never continuously over a long period. It's crystal clear though, not like bleedover. Has anybody heard this and/or figured out what it was?

I should note that it happens on both my 396 and my 996, and that I live so close to the southside transmitter that I can receive Arlington loud and clear with no antenna attached.

Also, there doesn't seem to be any rhyme or reason to how they initially dispatch runs. You would think that all runs would be dispatched over the Alerting channel, but I can go all night without hearing anything there, yet runs are being dispatched and units are responding. Other times, you hear everything (except ambulances, of course) get dispatched there.

And, like used to happen when they were still toning out on UHF, the stupid EMS dispatcher still seems to occasionally leave their console on simulcast, so everything they say ends up going out on the Alerting channel all day/night.

I'm just wondering if anybody has devoted enough time to AFD to figure out the rhyme and reason of how they do things.

Thanks,

Rob

Depends on personal needs and preferences, but I'd
recommend looking at the PSR-500 & 600, the BC396,
and the BC996. Personally I'd go with the GRE's.

I love my PSR500. The only complaint that I have with it is that when I take it mobile, occasionally on trunked systems it will
go into, what I call, "listening to the trunked system in a tornado mode". And that is just what the audio sounds like. No beeps or quirps, etc. but just something that sounds like intense wind noise over the trunked system audio, which while still there, gets overpowered by this pseudo "wind noise". I assume it is just overload of some type, but it happens quite often. I don't have this at home. Just while mobile. But it IS annoying. I don't have the radio attached to a rooftop antenna when mobile, just using the 800mhz antenna. Perhaps an antenna on the outside surface of the vehicle would help, I don't know.

28178. Current BCD396T and BCD996T Online Prices

Yahoo group: dfwscan (2008 — 2009)

Since someone asked, here is a May update of the current Bearcat pricelist that I have been maintaining for the 396 and 996 groups. These prices are as of today 16 May 2007, and represent the advertised online prices for the top ten online Bearcat dealers.

Bearcat1.com (Hobby Radio in Kettering, OH)
480.00 + 14.00 = 494.00

BearcatScanner.com (Sacramento, CA)
501.91 + 10.00 = 511.91

ScannerMaster.com (Natik, MA)
499.95 + 13.23 = 513.18

Grove-Ent.com (Brasstown, NC)
499.95 + 16.95 = 516.90

USAscan.com (Communications Electronics in Ann Arbor, MI)
519.95 (s&h incl.)

BearcatWarehouse.com (Clarksville, MD)
499.90 + 21.05 = 520.95

ScannerWorld.com (Albany, NY)
509.99 + 13.75 = 523.74

HamStation.com (Evansville, IN)
530.00 + ?

TheScannerOutlet.com (Holbrook, MA)
529.95 + 11.95 = 541.90

Universal-Radio.com (Reynoldsburg, OH)
529.95 + 14.95 = 544.99 (BCD396T)
539.95 + 14.95 = 554.99 (BCD996T)

Blaine,

You're getting some of the same symptoms I was, using the 800mhz antenna. That's why I went back to the stock antenna for in-city use. The multiple cell sites just overloaded the scanner too much, causing it to de-sense or do the unexpected. (There's probably a half dozen, at least, within a half mile of my house, some of them are multiple site arrays.) Using the stock antenna, the signal level is reduced enough to eliminate that annoyance, yet the scanner is so sensitive that I still hear the distant trunked systems like Plano & Ft. Worth. (Distant from my house.)

With a gain antenna, and the overload, even using the attenuator, I was rarely picking up any Tx DPS activity. Again, the rf overload & de-sense at work. With the stock antenna, I am receiving them. As I've said previously, once I get out of the inner city, like down into Ellis County, or out west of Fort Worth, I'll switch to a better antenna with good results.

From: Terry
Topic: 28173 Message: 28182

Really only 2 to chose from, the Uniden 996 and GRE PSR-600. The 600 is the newest out and does NAC decode which is nice. There are some complains of front-end overload however. There is also a big difference how the system data is arranged. I don't have a PSR but did own the PRO-96 and 2096 which I've been told are similar. To me it's not nearly as easy of a learning curve as the Unidens are.

I suspect both have positives and negatives and it's usually the user's preference that matters. I would really look at the display and how the data is arranged as the deciding points. Also if NAC decode is important then that wipes out Uniden.

For the record I use mine in my work and have 3 996's and a 396 (handheld version) currently.

Terry

Just heard etms air 1 saying they were making an emergency landing number 2 engine failure.

Dispatch confirms.

Dispatch calls back twice no reply for several minutes.

Finally come back with safe emergency landing.

Got my blood pumping

Trouble with what I do. I see far too many incident victims die so after a while you just automatically expect the worse. I hope they make a full recovery and maybe some parents out there keep better watch on their kids after hearing about this. Things like this really do happen in a heartbeat...

Not only do they have the DPD and DFR channels but Dallas Water Utilities as well! Guess the folks at Communications decided to stick everything that was still on UHF is the radios!

The sad part is they're zoned and most cops don't know how to find what they need. Also several I've talked to had no idea DWU stood for Dallas Water Utilities and after I told them the next questions was "why the hell is that in there"!

As usual there's been no real training on how to work the radio or what's the difference between DFR "fire", "ems" and "dispatch". I've stood in a Quiktrip with a whole heard gathered round and explained it. When I explain the time lag between them requesting an ambulance on PD or switching to FD and doing it they pay attention. Especially when I point out the fact your partner is down and if you request an ambulance through PD they will 9 times out on 10 get it as a n injured person. No engine company assigned and the same type of call as when an officer has maced a suspect. You tell that EMS crew loud and clear it's police shot and they mash the gas a little more!

That's interesting you say that, as if my feeble mind can
remember, I don't recall having the same problem with the stock antenna as I do with the RS 800. Since most of my monitoring while mobile has been primarily for 800, I have always just stuck with the 800 antenna. However, I believe I'll start testing out and maybe going back to the stock when mobile, to see if anything gets better. Also, I'll try the attentuator on and off thing. My feeling is the same as you, in that, this is a very sensitive scanner, that just gets overwhelmed at times in a metro setting. A very common occurence with radios trying to listen to ALL bands. And with cellular towers and overhead high voltage power lines pretty much everywhere the eye can see (unless perhaps you're in the middle of the Sahara or Death Valley), the radio is basically yelling "oh, my god!" because there is so much it can pull in. Sensitivity does have its drawbacks. BUT..I would MUCH rather have a radio that can (and will) pick up a tremendous amount, than one that is as deaf as a tree stump! Things can always be attentuated out and filtered. But if you can't pick up anything in the first place, well, all you have is a 500-600 dollar brick! :)

I really like the versatility of the PSR-500 because of the memory capability and the number of systems that it can store, but I find that for overall reception qualities while mobile, I keep migrating back to my ole' trusty PRO-96 because it just doesn't de-sense as often as the PSR. Blaine's description of the "tornado mode" is pretty acurate when you get in a very high RF intense area, like around NextHell towers! My PSR-500, after a year of use, doesn't seem (maybe the newness has worn off) to perform as well as when it was new. I've noticed a marked decrease in the AM air band reception.

Hey guys;

For those of you that share the same hobbies of Scanning AND motorcycle touring, I've uploaded pics of my 996T installed on a 2004 Honda GL1800 Goldwing in the BCD996T discussion group. (http://ph.groups.yahoo.com/group/BCD996T/photos/browse/bf36). Included are the Remote head unit. Also included is Garmin's Serial GPS "puck" to take advantage of the 996T's cool GPS features.. It's pretty cool to have the scanner running in the background on the intercom channel and have it switch to places of interest automatically as you move through the metroplex..

Paul Opitz, if you're "listening", it sure would've been nice if you guys at Uniden had carried forward the ability to plug the laptop into the RH for firmware upgrades, and programing changes... The fact that a guy NEEDS the Remote Head tends to indicate that it's going to be installed in a less accessible location... Instead you tease us with the unused cutout on the faceplate... :->

Anyway, just thought ya'll might like to see an installation that's a bit different!

I'm hearing what sounds like a control or data channel on 453.5125,
which I suspect is the system that's been discussed here lately. I also
have this listed as Roanoke PD Channel 2. Granted, I am in between the
two, it seems like that might be kind of close together and that the
two might interfere with each other.
I'll have to admit my ignorance on MPT1327 systems, so it may not be
the case. I'm open to corrections and explanations.
Thanks,
Ben

Ben,
Interference for other users of the adjacent frequencies (many of these are wedged in between the Dallas PD & Fire Rescue assignments), as well as assignments that seemed to be duplicated elsewhere in the area, was something that caught my attention as well. Apparently, objections due to potential interference were raised during the FCC licensing process, but it appears that these just squeak under the wire according to signal strength curve study. See the link Reply to Apco Objections <http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applAdmin.jsp?applID=\
4076061#> under the Admin tab for the base license <http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applAdmin.jsp?applID=\
4076061> .

Due to bleedover interference from Dallas PD & Fire Rescue, when I've checked for activity on the new system, I've been using the attenuator.

No, the idea is to deliver additional shaft horsepower to provide additional gross weight capacity and/or speed. Losing an engine is thus a critical failure.

I concur, and I'm sure Mark Colborn (DPD Air One)
will attest, losing engine power in a helicopter
is not a fun thing in the least. It's basically
set it down, and quick!. Even with an autorotation,
nothing is guaranteed (those are not fun either by
the way!). We saw that with the Fox 4 and KRLD
choppers. At least with a plane (depending on
elevation)if you lose engine power, you can
search for a field or clearing. With helos,
it's a whole different animal (and a frightening one
at that)!

That may be true Bill, but when you don't know why the first one quit, its better to be on the ground figuring out why it did just in case the second one decides to quit also. There may be contaminates in the fuel, or the pump jockey at the airport filled you up with the wrong fuel. Another consideration is how much power margin is available. Most light twin engined airplanes and helicopters barely have enough power to keep on flying with one engine, especially if they are loaded heavy or have a lot of fuel on board.

Yeah like they say on the blue collar comedy tour, that other engine will take you right to the scene of the crash, that second motor can be the difference in being an airborne paperweight, or finding a safe place to land.

28204. Programming trunked radio systems into my scanner

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-19 00:37:36 UTC
From: Jason
Topic: 28204 Message: 28204

Hey guys, first let me say thanks for a great group here! Lots of cool info.

I have a question regarding Trunked Radio Systems and my Pro-97 scanner.

When I bought it at Radio Shack here in Arlington, the manager cloned it from a display model and gave me a lot of good stuff to monitor.

On Radio Reference, the listing from these systems show control frequencies, and "other" frequencies (Red, blue, and black fonts).

My scanner was loaded with only control frequencies apparently, and it seems to be working fine.

My question is this:

Do I need to worry about the extra frequencies?

28205. Same Weather Alerts and My BC246T

Date: 2008-05-19 01:33:43 UTC
From: Jason Day
Topic: 28205 Message: 28205

Hey guys, ive got a question. I programmed my BC246T with multiple SAME Weather codes before the last big storms went through using ARC246 and put my BC246T into scan mode and never got an alert. It was my first time using it. Do i have to have it scanning in the weather mode or should my scanner automatically pick it up? Ive looked through the OM with no luck.

Thanks,
Jason

Anybody here familiar with LTR system programming of the Motorola HT1550XLS utilising CPS? I've got all the goods, and am relatively adept at using CPS. I just need somebody to maybe talk me through LTR system programming once.

Thanks,

Rob

28207. RE: [dfwscan] Etmc air 1 west

Yahoo group: dfwscan (2008 — 2009)

TO update a little more of what I heard. (would have done this sooner but typing a long paragraph on a blackberry is not fun. LOL)

I did hear some mention of a Mechanic being notified several minutes prior to them making the emergency landing. Sounded like they were headed back to the airport.

Keep in mind I had the TV going, as well as a couple of other radios.

So I do remember hearing twice traffic about notification of the mechanic.

Then the adrenalin pumping Emergency Landing radio call came.

Air 1 West delcairing an Emergency Landing Number 2 Engine Failure. That was it. 30 seconds later another voice came on in the same helo and said Air 1 West that was an emergency landing.

Dispatcher called them back several times with no replies. That was the worst part. I am not connected to them in any way and I was really hoping for the best, I can only imagine what anybody else working with them heard since all the helicopters use the same talk group, as well as dispatchers. WOW..

They then radioed back saying they had made a hard emergency landing, everybody was ok, and needed to start making notifications.

About 20-30 minutes passed and they asked for an ETA, and said they would need a tow to the hanger.

Few minutes later he said they needed to tow whats left of the helo back.

When I heard him say "whats left" I started to wonder just how hard they landed.

Also not sure where they are based out of, but they asked the dispatcher to make arrangements for them to get back "home" and sounded like another helo was going their way. But not sure.

Anybody local have any more info?
Oh this was at the Tyler airport I believe.

Yeah like they say on the blue collar comedy tour, that other engine will take you right to the scene of the crash, that second motor can be the difference in being an airborne paperweight, or finding a safe place to land.

That may be true Bill, but when you don't know why the first one quit, its better to be on the ground figuring out why it did just in case the second one decides to quit also. There may be contaminates in the fuel, or the pump jockey at the airport filled you up with the wrong fuel. Another consideration is how much power margin is available. Most light twin engined airplanes and helicopters barely have enough power to keep on flying with one engine, especially if they are loaded heavy or have a lot of fuel on board.

Mark

I thought the idea of twin engine EMS helicopters was to keep flying when one engine failed? Something else must have been going on.

>I programmed my BC246T with multiple SAME Weather codes before the >last big storms went through using ARC246 and put my BC246T into >scan mode and never got an alert.

I'm pretty sure that you can not be scanning public safety, etc.
and listening for WX warnings concurrently with the 246, or any other scanner for that matter that can monitor the SAME weather warnings. Either you have to do one, or the other, but not both. Someone please correct me on this if I'm wrong. Best bet is just to get a SEPARATE wx radio, rather than using the scanner. Midland makes some great ones, IMO. You could always have the warnings sent to your pager, cell phone, Blackberry, IPhone as well..:)

28214. BCT-15 Programming questions

Yahoo group: dfwscan (2008 — 2009)

Topic: 28214 Message: 28214

Now . . . If I can get a straight answer this time, without the word "
Google " in it, as I am fully aware of its potentional . .

I just picked up a BCT-15 this afternoon, and have come to the conclusion I
do *Not* have the correct programming cable, as I thought, nor do I have the
software.

I do not have alot of time currently to program this radio myself, nor the
money to purchase software and cable either. If there is anyone on here who
owns the BCT-15, Cable, and Software, and has the knowledge to help me get
this radio programmed, I would be willing to provide compensation for such
services, as to be determined later, off-list.

If you fit the description, please contact me by email.

Thanks

Piper Lands On Top Of Stinson, Pilots OK

Things Could Have Been MUCH Worse...

ANN REALTIME REPORTING 05.15.08 1850 EDT: "Like a perfectly planned stunt from a James Bond movie." That's how WFAA-8 in Dallas described the scene following a runway incursion accident at Northwest Regional Airport (52F) in Roanoke, TX Thursday afternoon.

<http://www.aero-news.net/#>

According to reports from the scene -- and evident from the accompanying photos, provided by Doug Reeves of *VansAirForce.net*<http://www.vansairforce.net/>-- a Stinson 108-3 had taxied into position at the end of runway 35 when a Piper PA-28-161 Warrior II approached to land.

What could have been a disaster resulted in bent metal, but thankfully no injuries... largely because the Piper's fuselage settled to the side of the Stinson's cabin, its propeller well away from those inside.

<http://www.aero-news.net/#>

The two pilots are reportedly neighbors, and had communicated on the CTAF prior to the collision... but each reportedly thought the other had agreed to yield to the other aircraft.

It's not a stretch to suggest the Piper's low wing may have also prevented its pilot from seeing the high-wing Stinson on the ground, and vice-versa.

<http://www.aero-news.net/#>

Reeves, who is based at Roanoke, noted on the Vans Air Force website that a row of trees at the end of runway 35 "can conceal an aircraft at the run-up area" from an aircraft approaching to land. In turn, those trees can also block the view from an aircraft on the ground, preventing a clear line-of-sight to see any aircraft on final.

I knew about the increase in loaded weight(look at some of the flight crews), but I thought two engines gave it a redundant system too. Like Ron White says(One engine left) "gets you to the crash before the paramedics."

You know you have a ham when he describes his radio by wavelengths.
You know you have a scannerist (primarily) when he describes his radio by Mhz.

LOL

28230. 159.7575 DCS 226

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-23 14:34:24 UTC
From: commscan
Topic: 28230 Message: 28230

I just confirmed this morning that this is (at least) used by LifeStar 4. I did not hear the helicopter but I definitely heard the base taking a patient report to relay. This frequency was either confirmed or listed (w/o any know DCS) as Brazos' PHI frequency.

I heard traffic last night that made me wonder if this was being used by a more local air med service. It still might be PHI up here, but then I don't think I've ever heard a LifeStar helicopter come up on a PHI frequency before.

Where is LifeStar 4? Is it based in Decatur? If anyone else can add to the confirmation of this frequency I'd be interested in knowing what you heard.

Sure it's not P25 buzz-saw? DPS is just about done with their P25 conversion, including the CLE units. I know I've decoded P25 on the CLE channels more than once already.

In and around Houston they are using NAC 162 for 155.505. All activity has been CLE simplex so the repeater NAC for this frequency may be different.

Thanks Wayne.

Seems like they are following a NAC version of
their old CTCSS tone, which (up here) was 162.2
repeater & simplex.

28239. Possible Radio-Related Job Opportunities

Uniden is wanting to discuss some upcoming opportunities with potential candidates. Email me privately if you are both interested and have related background. We are not yet pulling the trigger on either, but want to be able to move quickly if our strategy requires it.
A: Borland C++ CodeBuilder 6.0 programmer for a contract programming assignment. This will likely be less than one man-month of work, but could be some nice extra income if you have the software and experience.
B: Product Development: We are considering expanding our staff so that we can take on additional product opportunities. The ideal candidate would be familiar with our current product line, have experience in development new products in a multi-national development environment, and be willing to travel internationally (less than 5%).
I have heard several people profess that they would do (B) for free. They would, of course, be given preferential consideration. :)

Yeah, pretty sure. I have a GRE 600, plus the transmissions are continuous, not intermittent like voice traffic would be. It sounds exactly like a Motorola control channel to me. The next time I hear it, I'll see if I can get a system ID instead of just locking it out because it's annoying.

Hi Tom & List,

I guess 159.765 is close enough to 159.7575 to still catch the traffic. But I definitely have 159.7575 plugged into the scanner. The communications (since I'm listening from W Fort Worth) have been clear but not especially strong. Nothing sounded off frequency or out of tune, but just to see if it helps any, I'm adding the frequency from the FCC database too.

The strange thing about all of this is that yesterday I was hearing the traffic pretty frequently up until my second e-mail to the list around 5 PM. But according to my ARC396 software log I've left running since then, I haven't received another transmission since approximately 5 PM yesterday. It makes me wonder if a tiny bit of ducting could've been going on or if the use of the frequency might have been temporary.

I'm going to keep an ear on both 159.7575 and 159.765 over the next few days and see what I can catch.

If I had to make a choice, I'd say that the traffic I was hearing was on 159.7575 though. But thanks for the 159.765 frequency listing to check on too Tom.

If I hear anything more I'll be sure to post it to the group...

Ok. Hopefully these will not sound like stupid questions, but:

When you are listening to this frequency, do you have your GRE 600 in auto mode tuning or FM mode? If you have in auto, try turning it to FM. See what it does.

How strong is the signal? So when you program it in, and are listening, all you hear is what sounds like a trunking control channel. So, there has never been any decoding of the signal into a voice element (like the scanner is attempting to decode the P25 "buzzsaw" but the signal is just not strong enough into the scanner)? Occasionally, this will happen on digital scanners (happened on my PRO-96 and happens also on my PSR-500). Occurs when distant signals (such as - for me - Grayson County or DPS) gets into the radio, and the radio just doesn't have enough signal strength to decode. So it justs defaults into the "buzzsaw", but never clear voice. Digital signals are very fickle with these scanners. The scanners themselves are excellent at decoding, however, you have to have a good signal level going into them. Faint signals or even borderline don't cut it most of the time.

Lastly, are you hearing it on the duckie antenna or an outdoor elevated setup?

28249. This whole Duncanville/DeSoto thing

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-24 23:33:20 UTC
From: rob.davis@armynursecorps.com
Topic: 28249 Message: 28249

I don't listen to the Duncanville-DeSoto "Regional" system, per se, so I don't really know wtf is going on with all that. But I do scan their fire tone channel, 155.925, in a scanner full of fire tone channels. In the last couple of days I am getting a LOT of noise there. I am getting an almost constant tone that sounds like the idle tone from the old IMTS mobile phone system. Also getting a lot of rapid mic clicking type noise. When "Regional" dispatch or units transmit, they are heard perfectly over the tone. I don't know if they are simply overpowering the tone, or if their transmissions temporarily stop the tone. Either way, this is very annoying.

Anybody know what's going on there? Is this noise symptoms of the new system they are in the process of implementing, or is it outside interference unrelated to Regional?

Rob

Rob,

That tone issue has been around for months. I started getting it last fall, on the old Duncanville FD primary channel, 154.355, which is now used as a fireground/response frequency, & referred to as "Regional Ch 3". This was well before there was any noticeable activity on the new trunk system.

For some discussion of these tones over on RadioReference, see this thread <http://www.radioreference.com/forums/showthread.php?t=86401> . I have no idea of it's actual purpose.

And I'm with you on the annoying part. I have a number of friends in that area, so I have all the frequencies plugged in. Occasionally, it gets too overpowering, & I have to just lock the offending channel out for a while.

Hi Tom & List,

Yep, you are right Tom. I'm actually receiving the signal and even the helicopter much better today on 159.765. If I hadn't had the 159.7575 frequency in my scanner under the PHI Group scanning, I wouldn't have come across the traffic at all (at least yet). Thanks for the correct frequency and the FCC link Tom and thanks to everyone else who replied to me off list too.

28252. Programming the BCT15 . . .Again...

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-25 19:35:11 UTC
From: Code 3 Productions
Topic: 28252 Message: 28252

I have been up and down through the manual, and due to not having the cable and software, have still, yet to figure out how to get this to do what im trying to do.

When I purchased this from a gentleman off this list, it came with everything from DC to Daylight in it, however, 80% of that stuff is (locked out ?) or the scan bank or group is just not turned on? im not sure. I live in the Plano area, and I cannot recieve any plano frisco allen mckinney, and so on so forth area stuff, while in scan mode, i have to stop in other banks and scroll to the system and ID's...

If ANYONE can shed some light, i've googled, and oogled, and looked through this manual until my head is ready to explode, im sure it would be 100X easier if I just had the cable and software lol.

28253. Help.....

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-26 00:50:32 UTC
From: Wayne Edgin
Topic: 28253 Message: 28253

I am attempting to obtain a mobile scanner. I am building a new car and to be honest, I have just spent a great deal of cash on this project. Does any one have a cheap 16 channel scanner that they might part with ? nothing fancy. I use my car for work in Dallas, so 800 and 900 would not be needed. Please contact me off line. Thanks

28254. Arlington PD has a report of "an explosion of some sort " near I-20

Rednecks, beer and boats -- makes for a killer combination.

When we had the big sailboat we avoided the holiday boaters. One year on the 4th of July at Eagle Mountain some bozo took a paddleboat out in the middle of the lake to watch the fireworks. No lights. Some of the bigger powerboats (40'-50' would never even see him in the dark.

28259. Re: [dfwscan] Programming the BCT15 . . .Again...

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-05-27 14:07:37 UTC
From: Paul Opitz
Topic: 28252 Message: 28259

Well, the O/M isn't going to tell you how the other person programmed the scanner...so I'll make a guess that it is just set up as it came from the factory.
Instead of banks, the BCT15 uses SQK (System Quick Keys) to turn on/off sets of systems. Works almost exactly like bank keys...but better.
In the case of the preprogrammed stuff, all of the metroplex was assigned to SQK 52. So, to turn on/off all those systems, you press [.] 5 2 while scanning.
You'll probably want to do (at least) two things:
1) Delete some or all of the systems outside the DFW area.
2) Reassign the SQK for some or all of the systems you want to routinely listen to.
In both cases, the easiest way is going to be using software. However, you can do so manually by navigating the menu system. For 1) there is a menu option for each system that is "Delete System."
For 2, you'll need to navigate to "Site Options" for each site on every Motorola and EDACS system and reassign the SQK to whichever one you want to use (0-9 are most convenient, as you do not precede them with the [.] to activate/deactivate). For Conventional and LTR systems, the SQK is in the "System Options" list for the system.
If it was programmed some other way (not the factory preload), then you can determine which SQK is assigned for each system by pressing HOLD, then use F+scroll to step through each site/system. The next-to-bottom line in the display will indicate the SQK number (the current system's SQK will appear if the SQK is enabled, or an * will appear in place of the SQK if that SQK is disabled). Below are a couple of examples of the line with the corresponding SQK:

```
S0:- - - - 5 - - - - -       SQK 5
S5:- 2 - - - - - - - -       SQK 52
S3:- - - * - - - - - -        SQK 34 (and it is disabled)
```

Having lived in Tampa-St.Pete for several years, my favorites
were the bozos that believed that since they were well versed
and adept at navigating the Inntracoastal Waterway that they
would have no problem whatsoever piloting their little dinghy
out into the Gulf Of Mexico, for a little "three hour cruise",
so to speak. Show these goofballs some 20 foot swells (even on
a clear beautiful day), and here come the Mayday calls. Needless to say 156.800 was rather active....:)

From: Bill Anderson
Topic: 5129 Message: 28263

How can a 5/8 wave VHF antenna help reception on a LTR UHF trunked radio? The security company I work part time for put a Maxrad VHF antenna on the patrol cars and improved the reception. How does a 42" whip with a loading coil work on UHF? Is this something new or some new style antenna? I thought the mismatch would make the radio useless.I'm confused......

It shouldn't work very well. I assume you know for sure it's on UHF? There are VHF LTR systems. There is also a more rugged antenna they looks a lot like the VHF with a coil but it's not 42" long.

If it is locked out, when you scroll to it press F+L/O to unlock it.
If its SQK is disabled, just press its SQK (or [.] +SQK for 2-digit SQKs) to enable it.
I have Plano in UASD format (and it is also in the files area of this group...but might need some minor updates if things have changed on the system in the last year or so).

well, all that aside, I've got the cable now, and the BCtool Program, but somehow, i've locked out plano completley now, I cant even pick them up if i scroll to the system.

Anyone who has a BCTool Set of programs, or mods, that I might try to program the radio with would be great, OR if someone has a copy of the ARC15 they can let me get ahold of, that way I can just clear the radio out, and upload everything off R/R.com and be done with it.

Timmy,

ARC15 is available from Scanner Masters and a registered copy will cost you around $69.00:
http://www.scannermaster.com/ProductDetails.asp?ProductCode=18%2D521075&Click=20907
Stop asking for someone on this list to give you a free copy, or pirate a copy of the software for you. The developers of these software programs like to be compensated for their work, and that is only fair. You expect the media to pay you for the photos and videos you take, why do you think you have the right to ask for something for free which someone has spent lots of man hours developing? If you are hurting for money, download the free Uniden UASD programming software for the BCT15 from their web site. Then actually read the directions and learn how to use it. It may not have as many features as the aftermarket software programs, but it will do everything you need it to do now that you have a cable.

Subject: [dfwscan] Programming the BCT15 . . .Again...

I have been up and down through the manual, and due to not having the cable and software, have still, yet to figure out how to get this to do what im trying to do.

When I purchased this from a gentleman off this list, it came with everything from DC to Daylight in it, however, 80% of that stuff is (locked out ?) or the scan bank or group is just not turned on? im not sure. I live in the Plano area, and I cannot recieve any plano frisco allen mckinney, and

so on so forth area stuff, while in scan mode, i have to stop in other banks and scroll to the system and ID's...

If ANYONE can shed some light, i've googled, and oogled, and looked through this manual until my head is ready to explode, im sure it would be 100X easier if I just had the cable and software lol.

Sorry Paul, was I thinking about the 396's UASD software? I seem to remember that one of them was free at one time? Nonetheless, is the BCT-15 UASD still only $30. A bargin at any price IMO.

UASD for the BCT15 isn't free, either (but it is the only software I use for programming, so is all I have for file sharing).

Timmy,

ARC15 is available from Scanner Masters and a registered copy will cost you around $69.00: http://www.scannerm aster.com/ ProductDetails. asp?ProductCode= 18%2D521075& Click=20907 Stop asking for someone on this list to give you a free copy, or pirate a copy of the software for you. The developers of these software programs like to be compensated for their work, and that is only fair. You expect the media to pay you for the photos and videos you take, why do you think you have the right to ask for something for free which someone has spent lots of man hours developing? If you are hurting for money, download the free Uniden UASD programming software for the BCT15 from their web site. Then actually read the directions and learn how to use it. It may not have as many features as the aftermarket software programs, but it will do everything you need it to do now that you have a cable.

If it is locked out, when you scroll to it press F+L/O to unlock it.
If its SQK is disabled, just press its SQK (or [.] +SQK for 2-digit SQKs) to enable it.
I have Plano in UASD format (and it is also in the files area of this group...but might need some minor updates if things have changed on the system in the last year or so).

well, all that aside, I've got the cable now, and the BCtool Program, but somehow, i've locked out plano completley now, I cant even pick them up if i scroll to the system.

Anyone who has a BCTool Set of programs, or mods, that I might try to program the radio with would be great, OR if someone has a copy of the ARC15 they can let me get ahold of, that way I can just clear the radio out, and upload everything off R/R.com and be done with it.

Tim

On 5/27/08, Paul Opitz <pmanu44@yahoo. com> wrote:
Well, the O/M isn't going to tell you how the other person programmed the scanner...so I'll make a guess that it is just set up as it came from the factory.

Instead of banks, the BCT15 uses SQK (System Quick Keys) to turn on/off sets of systems. Works almost exactly like bank keys...but better.

In the case of the preprogrammed stuff, all of the metroplex was assigned to SQK 52. So, to turn on/off all those systems, you press [.] 5 2 while scanning.

You'll probably want to do (at least) two things:

1) Delete some or all of the systems outside the DFW area.
2) Reassign the SQK for some or all of the systems you want to routinely listen to.

In both cases, the easiest way is going to be using software. However, you can do so manually by navigating the menu system. For 1) there is a menu option for each system that is "Delete System."

For 2, you'll need to navigate to "Site Options" for each site on every Motorola and EDACS system and reassign the SQK to whichever one you want to use (0-9 are most convenient, as you do not precede them with the [.] to activate/deactivate). For Conventional and LTR systems, the SQK is in the "System Options" list for the system.

If it was programmed some other way (not the factory preload), then you can determine which SQK is assigned for each system by pressing HOLD, then use F+scroll to step through each site/system. The next-to-bottom line in the display will indicate the SQK number (the current system's SQK will appear if the SQK is enabled, or an * will appear in place of the SQK if that SQK is disabled). Below are a couple of examples of the line with the corresponding SQK:

S0:- - - - 5 - - - - - SQK 5
S5:- 2 - - - - - - - - SQK 52
S3:- - - * - - - - - - SQK 34 (and it is disabled)

Date: 2008-05-30 16:36:55 UTC
From: Dan Brownfield
Topic: 28274 Message: 28274

National Hurricane Center's WX4NHC Sets On-The-Air Station Test

The annual WX4NHC <http://www.wx4nhc.org/> On-the-Air Station Test from the National Hurricane Center (NHC <http://www.nhc.noaa.gov/>) in Miami takes place Saturday, May 31, 1300-2100 UTC. "The purpose of this annual Station Test is to test all of our radio equipment, computers and antennas using as many modes and frequencies as possible. This is not a contest or simulated hurricane exercise. New equipment and software will be tested, and some operator training will also be conducted," says WX4NHC Assistant Amateur Radio Volunteer Coordinator Julio Ripoll, WD4R. He adds that WX4NHC also will be testing new computers and software as well conducting operator training.

WX4NHC will be on the air on HF, VHF and UHF, plus 2 and 30 meter APRS <http://www.aprs.net/> . Suggested SSB frequencies are 3.950, 7.268, 14.325, 21.325 and 28.525 MHz, +/-QRM; WX4NHC reports that they will mostly be on 14.325 MHz and will make announcements when they change frequencies. WX4NHC also will be on the VoIP Hurricane Net <http://www.voipwx.net/> 1700-1900 UTC (IRLP node 9219/EchoLink WX-TALK Conference) and on South Florida area VHF/UHF repeaters and simplex.

Stations working WX4NHC exchange call sign, signal report, location and name plus a brief weather report, such as "sunny," "rain" or "cloudy." Non-hams may submit their actual weather using the On-Line Hurricane Report Form. QSL to WD4R and include a self-addressed, stamped envelope. Do not send cards to the NHC. Due to security measures, no visitors will be allowed at NHC during the test.

Bartonville and Argyle are both Argyle Fire Department areas along with Copper Canyon, Northlake, and Corral City. Their FD unit numbers are 510's. (511, 512, 513, etc.)

I believe the Argyle PD units are 850's but I am not 100% sure on that.

I was actually the dispatcher on the CareFlite end that launched those aircraft. The initial aircraft lifting is the Frisco Bell 222 and second one that you see ground taxiing is the Dallas Agusta E109Power. PHI didn't respond because of weather limitations at their base. Was a good job done by the crews on the ground also.

Convicted steroids dealer who gave names to NFL found dead

ESPN.com news services

Updated: June 5, 2008, 9:08 PM ET

- Comment <http://myespn.go.com/conversation/story?id=3427526>

PLANO, Texas -- A convicted steroids dealer who recently met with NFL security officials and gave them names of players he said bought steroids from him has been found dead in his home.

[+] Enlarge <http://sports.espn.go.com/nfl/news/story?id=3427526#>
[image: David Jacobs] <http://sports.espn.go.com/nfl/news/story?id=3427526#>

AP Photo/Tony Gutierrez

David Jacobs, seen after pleading guilty to steroid charges in 2007, recently met with NFL officials -- and according to his lawyer, gave them the names of players who had received drugs he had made. He was found dead on Thursday.
Early Thursday morning, Plano police made a welfare check and found 35-year-old David Jacobs and 30-year-old Amanda Jo Earhart-Savell dead. Both had been shot.

Officer Rick McDonald, a police spokesman, said the officers were making a welfare check after relatives of Earhart-Savell expressed concern about her whereabouts.

According to the Dallas Morning News, which first reported the story, Jacobs and Earhart-Savell had been in an on-again, off-again relationship, and at one point were engaged to be married.

Heather Bowden, also a spokeswoman for the Plano police, told the New York Times in a telephone interview, "At this point, it is a homicide investigation, and we have no reason to believe otherwise."

Jacobs was sentenced to three years of probation and fined $25,000 on May 1 after pleading guilty last year in federal court in Dallas to conspiring to possess with intent to distribute anabolic steroids.

According to ESPN the Magazine senior writer Shaun Assael, who had been in contact with Jacobs throughout May, Jacobs was reticent and nervous about the information he had and the people it implicated.

When explaining why he did not want to go public, Jacobs said: "The kinds of people I know about could put a bullet in the back of my head."

Jacobs's father, also named David, of Jasper, Ga., told The Times in a telephone interview that he received a call from an anonymous person, who told Jacobs to call the Plano police. Jacobs said police were unable to tell him much about what might have transpired.

"I spoke with David through a text message about three or four days ago, and he said he was fine," Jacobs told The Times. "He has been trying to rebuild his life. He got crossed with some bad things and made some bad choices. At this point, I am just beside myself."

The Morning News reported it had spoken with Jacobs frequently and exchanged e-mails with him as recently as last weekend. Jacobs had sought to rebuild his nutritional supplement business, but he was experiencing financial problems and having trouble getting his old client base to work with him, according to the report.

On May 21, Jacobs met with NFL security officials in the Dallas area and gave them names of players he said bought steroids from him, according to Hank Hockeimer, his lawyer.

Hockeimer told the newspaper on Thursday he had not yet been briefed about the situation at Jacobs' house.

The NFL requested the meeting after Jacobs was sentenced to three years of probation on May 1 for a single count of conspiracy to distribute anabolic steroids. He had cooperated with federal authorities since his arrest last year.

"We offer our sympathy to the families of David Jacobs and Amanda Jo Earhart-Savell," the league said in a statement. "As we have previously confirmed, our security representatives interviewed David Jacobs on two occasions. We are reviewing the information to determine if there is documented evidence establishing any violations of our program and will follow up on any other information that is provided.

"It is premature to comment on any specific player at this time. Anyone found to have violated our policies will be subject to discipline, including suspension. We will continue to be responsive to any needs of law enforcement on this matter."

Neighbors who were still gathered at the scene about 12 hours after officers arrived said they became aware of Jacobs through television news reports, but didn't know him well. They said they didn't see any suspicious activity or hear any gunshots.

One neighbor who reached out to Jacobs after his guilty plea by asking him to warn children about the dangers of drugs said she didn't believe police when they told her he was dead.

"Knowing somebody died this way, it's hard to take," Yeharerwerk Gashaw said. "I was shocked."

By his own account, Jacobs was a prolific salesman, moving 1,000 bottles of anabolic steroids a month and an equal number of growth hormone kits that he obtained illicitly from China.

Hockeimer had said that league officials seemed "genuinely interested" in what Jacobs had to say, as well as in canceled checks and e-mails that he provided.

Jacobs has publicly acknowledged that he dealt primarily with two NFL players and earlier identified one of them as offensive lineman Matt Lehr<http://sports.espn.go.com/nfl/players/profile?statsId=5585>.

Last month, Jacobs told the Morning News that Lehr purchased tens of thousands of dollars of steroids and growth hormone from the spring of 2006 to the spring of 2007. He also told the paper that Lehr agreed to have boxes of raw steroid powder from China shipped directly to his Georgia home.

Lehr served a four-game suspension while a member of the Atlanta Falcons<http://sports.espn.go.com/nfl/clubhouse?team=atl>in October 2006 after he tested positive for a banned substance. He spent last season with Tampa Bay and was acquired by the Saints in the offseason.

Lehr's attorney, Paul Coggins, has said the player hasn't used banned substances since he was suspended and has since passed NFL drug tests. The attorney has also said Jacobs' allegations are retaliation because Lehr wouldn't pay Jacobs' legal fees.

After his sentencing, Jacobs told The New York Times that he hoped to tell league officials about "loopholes in their program." He also said he'd advised about 10 players to use finasteride, a drug to treat balding, because it masks steroid use.

Information from ESPN the Magazine senior writer Shaun Assael and The Associated Press was used in this report.

28292. Perot Systems

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-06 03:07:55 UTC
From: Mark Saum
Topic: 28292 Message: 28292

There appears to be some kind of fire activity at Perot Systems. I can't tell if it's a drill or not. One engine mentioned he couldn't get in as there's nobody at the guard shack. They were calling in about five units.

I missed the early part as I didn't turn on the scanner until I heard a passing fire truck.

It's on the Plano fire channel.

NBC is reporting a story about a missing person, and DFW enlisting the help of other agencies. I must of totaly misheard something, or there was a another incident.
32880 on the NE Tarrant system is used for the Airport interop with other agencies, so tune in there. I'm at work and not able to scan as much as I'd like. It doesn't sound like anything to get too excited about at this point.

There was an incident on Friday where an autisic child was lost in
the woods at a park in Plano. I didn't learn the outcome.
They wanted to get a helicopter up, but the wind was pretty bad, so
they had to wait until after dark when the wind died down.

>going to fill in at DFW Station 5. "They're working a possible
>chlorine bomb".

FWIW - and I remember a few had asked
(as well as Lindsay on RR)-

Yes, it appears DFW Int'l does transmit their
Fire Alert tone and talkgroup 256 DEC/02-000
AFS WITOUT ESK enabled. Unfortunately, the
response talkgroup (CH 15) is not. However,
SOME is better than NONE at all. And, if you
are within range of the 800 system (and listen
QUICK when there IS something suspected or
going on), at least you can get a little idea
of what FD/EMS is rolling to. I know within the
last few days I've heard several medical
emergency alerts.

Again, 256 is the only talkgroup I've confirmed.
In my PSR500, I have just the FD/EMS talkgroups
in one list, and another list with ALL of the DFW
talkgroups.

Hope this helps those in the media, as well as
monitors that have thought all along "all is lost"
listening to DFW. It's NOT...brother or sister....:)
It's certainly limited, but it's THERE.

Of course, as myself and others have strongly pointed
out over the years, if the *&%$! hits the fan at DFW
(such as a major crash), forget about airport DPS.
Everyone for miles around will be responding! Don't
worry about missing the action! You won't. I'll
guarantee that! It'll be the biggest monitoring CF
in a long time!...;-)

Good talkgroup Ben. I agree. Great one to have in the scanner. I've usually only heard drills and such on there, but I feel confident if something major happened, it'd be hopping with activity as well.

Hi Group,

I don't know if anyone from the Houston area is still on this list? If there is, maybe you heard more on the following incident. This is all I know and it isn't good for PHI 12. Somewhere between 8:30 AM and 9 AM this morning PHI 8 crashed in Walker or Waller County (both are Houston area). From the report I was given there were no survivors.

This is confirmed and it is all I know about the incident. It's definitely not a good ending to this story. I'm not sure if there was a patient onboard or not.

Are you referring to what is commonly called a "tornado siren" as
Hurst has been putting some new ones in recently. If so, that is NOT
the EAS. Google EAS to learn what the EAS truly is and is not.

The tornado sirens in NRH are not "new" per se. They had switched to the Whelen electronic sirens a while back. The only actual motor siren that I have seen in any close proximity to NRH is the old American Signal T-135 that is off of Popplewell and Hardisty in Richland Hills. However, I also know that the sirens that are in NRH are not tested on Fridays. If memory serves me correctly, NRH tests there sirens on the first Wednesday of every month at 10am. But hey, I have been known to be wrong before.

Where in my post did I say "these?" I didn't

I posted exactly where I was, NRH2O!

And yes it was the EAS, the voice that broadcasted over the PA system
said... "This is a test, this is a test of the emergency broadcast system"

Obviously you guys have not heard them yet since you are short to
judge. They were loud and clear while I was inside NRH2O @ 09:00, the
manager of the waterpark was walking by as they broadcasted it. I
asked if it was something new they put up and he said "no, you can
actually hear those."
They sounded like they were coming from the direction of Hurst (from TCC.)

This is exactly why I dont post on forums or groups, everyone has a
little clique and puts down folks who does not post much.

I will be sure and not ask another question here again.

i don't know what it is about hams and scanner listeners. i can understand the hams, they all seem to think they have something important to say once they own a microphone and all i can say is thank the godz and the fcc for repeater off-timers! unfortunately there are no such limits on 80 meters--only the finals melting seems to end the qso's there.

but the swl's (shortwave listeners) seem to be the exception--i find them mostly a polite bunch unless you mistake a beverage antenna for a rhombic.

on usenet, rec.radio.scanner or alt.radio.scanner pretty well dissolved in death threats a few years back. that should tell you all you need to know about the personality type.

73 de kg5vt -- (mostly non-snotty, but then again i don't talk much either since i retired from skywarn. and i've never been on 80 meters, only on 40.)

Subject: Re: [dfwscan] DFW Airport incident

>going to fill in at DFW Station 5. "They're working a possible
>chlorine bomb".

FWIW - and I remember a few had asked
(as well as Lindsay on RR)-

Yes, it appears DFW Int'l does transmit their
Fire Alert tone and talkgroup 256 DEC/02-000
AFS WITOUT ESK enabled. Unfortunately, the
response talkgroup (CH 15) is not. However,
SOME is better than NONE at all. And, if you
are within range of the 800 system (and listen
QUICK when there IS something suspected or
going on), at least you can get a little idea
of what FD/EMS is rolling to. I know within the
last few days I've heard several medical
emergency alerts.

Again, 256 is the only talkgroup I've confirmed.
In my PSR500, I have just the FD/EMS talkgroups
in one list, and another list with ALL of the DFW
talkgroups.

Hope this helps those in the media, as well as
monitors that have thought all along "all is lost"
listening to DFW. It's NOT...brother or sister....:)
It's certainly limited, but it's THERE.

Of course, as myself and others have strongly pointed
out over the years, if the *&%$! hits the fan at DFW
(such as a major crash), forget about airport DPS.
Everyone for miles around will be responding! Don't
worry about missing the action! You won't. I'll
guarantee that! It'll be the biggest monitoring CF
in a long time!...;-)

...and I actually heard them test this on XM the other day. Right in the middle of a good song they make an announcement and all that nonsense like they do on TV every so often.

It made sense to me that they would have this type of alert system at an outdoor park -- I suspect every large sporting venue, etc... has one of those receivers and a way to play it over their PA system.

And it looks like some of the folks here need a Midol and a time delay on their outgoing messages.

You might be able to hear them if they are still using the old radio system to run the sirens.
NRH's siren control frequency is 453.300 PL 141.3 or at least it was 3 years ago when I lived in Hurst.
I don't know anything about the new system or how the voice announcement gets to the sirens.

Thank you Billy and Tom for actually explaining something to me
instead of directing me to "google."

I am guessing these are the new "tornado sirens." As stated, I believe
they were coming from the Hurst side. They were easily heard from
where I was, I do not know the exact location of it. They tested, I
think, 2 different tones.

From: blaine.brooks@verizon.net
Topic: 28294 Message: 28323

>OK, so is it analog?

Seems to be, but I could be wrong.
I was hearing it on my PSR500. Didn't
sound digital though.

Sounds just like the old airport EDACS
system before the digital switch. Like
what Grand Prairie was doing during their
switchover.

I think Lindsay explains it better on
Radio Reference about how the San Antonio
system is all Pro Voice w/ESK enabled almost
99% of the time. But there is that rare instance
where a few talkgroups are broadcast that DON'T
have the ESK enabled, and they sound just like the
old analog system(s).

Hope that helps. Honestly, I know very little
about Pro Voice systems.

28326. F35 STOVL first flight

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-11 12:07:13 UTC
From: Ben Saladino(YG)
Topic: 28326 Message: 28326

Keep your eyes and ears open if you're interested in seeing the first flight of the F-35 STOVL (Short Take Off Vertical Landing) version today. It won't being doing the STOVL stuff until next year, but several sources say there should be a first flight in conventional mode today. I've heard roll out at 9AM, and flight at 10AM, but just saw on another forum saying 11AM.

149.235 is the Lockheed Martin Fire Department frequency. There are several other frequencies you might search in the archive for "F35" for when the first flight of the conventional model flew a year or so ago.

28327. Garland System

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-11 15:44:45 UTC
From: Patrick Wrigg
Topic: 28327 Message: 28327

Does anybody know what Garland is doing with their system?
I heard again today fire dispatch tell the units that they were switching to the new radio tower.
I have heard this before, seems once or twice a month. But its been going on for at least 6 months now. And it usually lasts 5 or 10 minutes and thats it.
Does anybody out there have any real idea?

I knew they were adding a tower at Beltline and Rowlett Rd for a single site system. But my understanding is they lost coverage on the north side of town.
Now when they do the tests, I hear a clicking when they unkey like a Voting Receiver. Makes me wonder if they are going to use a Multi Site Single Zone system.

Please feel free to fill in the gaps.

1215 hrs in Burleson (South Tarrant/North Johnson county) has an 18-wheeler vs. passenger car MVA working on I-35 with 4 ambulances and CareFlite enroute. Mutual aid from Crowley (154.37), Alvarado (154.445) and MedStar (FW trunk).

Yeah, it sounded like good times. I think they ended up with 5 ambulances and two CareFlite birds. One pedi trauma went to Cooks, not sure where everyone else went. They no-rided the trucker. Not sure if he actually had any injuries or not.

The first BFD guy on scene was in a POV, I think. He was by himself and you could hear the serious "oh shit!" in his voice. Anyhow, the next Burleson newspaper should be interesting.

28336. Active Low-Band Frequencies in DFW

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-12 19:44:56 UTC
From: rob.davis@armynursecorps.com
Topic: 28336 Message: 28336

Does anyone here know of any low band frequencies that are particularly active? I know Johnson County fire still runs on 46.1, but most everything is on hi-band there now. I don't hear anything on Tarrant County's old 46.06 anymore.

What about businesses? What about even data? I'd like to think there is nothing on low band that I even need to worry about anymore, but I want to do some antenna performance comparisons on all bands, but can't find enough activity on low band to really do it there.

Thanks for any help!

One crane being used to erect another crane, and one collapsed. One worker on the collapsing crane (23 years old) jumped and took a pretty long fall, sustaining head injuries,
among others. He was treated pretty extensively on the ground and then flown by CareFlite to Baylor in Dallas, which is a bit unusual for an Arlington incident. Two other workers on the ground were injured and transported by ground ambulance.

What is with all the crane accidents lately?

I don't know how far you are from Fort Worth and I don't know if these
are still there but there used to be some
handicapped transportation on 47.46 that was very active during business
hours on weekdays and Medstar's data channel on 45.64 had continuous
data bursts all the time.

There is also a ham repeater on 29.66 in Fort Worth that is very active
at times when the band is open.
For antenna comparison you also might use TV channel 2 which is 55.25
video carrier and 59.75 audio.

Geez, here we go with the terms again. Rob is a paramedic. He helps people! I'm sure he doesn't like seeing children die, just like the rest of us. As I news photographer I'm likely to describe something like this as a "good crash". If fact it was, so good in fact someone died. That's not to say I'm glad or it was a good thing to happen. People express themselves in many ways and it's usually dictated by their life experiences. This one sounded cool, bad, sad and tragic but for some of us here those are all the same too many times.

Terry

Thanks Terry for your comments. I agree.

Rob's comments doesn't mean the man is "non-sensitive" to
a serious situation such as this accident. It's just in his
line of business (and many law enforcement, news media, and forensics/m.e.). It's commonly
referred to as "gallows humor".
It's not used to insult. Far from it. It's used to cope with
day to day news of tragedy somewhere in the world, locally,
(or specifically) a person's line of work. True, it's an odd
and even insulting sense of sympathy for those who have lost,
but trust me, hang around a forensics or m.e.'s office for a
while, and you'd be shocked at what you hear "joke-wise". I
had a very good friend in Atlanta that was a forensics
investigator, and the guy had some truly sick jokes. But it
was how he coped with going crazy from seeeing bodies on
the slab every freakin' day and night!

Having worked in media liked Terry, I can't tell you
how many fires or accidents I saw, covered, or flew
over, and I replied "good one" when I saw them. For
a media person there's a big difference between a
fender tapper, and a 30 car pileup in the snow, with
10 cars on fire! "Good one" from a media's standpoint
simply means that the reporter was not sent to the scene
of some ridiculous incident that no one cares about, or
is not considered newsworthy by the general populous.

Honestly, I gave up on low band quite a while back
for local stuff. TXDOT Ft. Worth used to be on 47.02
before moving to the VHF narrow band, but that's about
the last "pseudo recent" one I can recall.

Low band still holds alot of "skip" potential though,
as many areas of the country still rely on low band
for many communications. Just not much here in DFW, if
any at all. As you stated, Johnson Co. is the only
one left I believe.

Back when I helped work on 2-way radios, we had alot of low-band VHF stuff in the shop. We would burn in repairs for a day or two and then ship them back out. Anyhow, one morning we were listening to one of the radios and hear some unfamiliar voices -- turns out it was two guys in Maine plowing snow. Actually talked with them briefly on a dinky 4-watt Regency with a small multi-band ground plane.

Breaking news has not, and will not become off topic here. Course,
it'd be nice if you could tie a scanner angle to it somehow.
Announcing the death of a celebrity, or something to that effect
probably shouldn't go here.

I cuss like a sailor in real life, but try to refrain from doing so
on-line. I won't stop others, though. And if some people can't handle
it, well, fuck'em if they can't take a joke.

For those of you who don't have it out of your system yet, please
hurry up and do so. I'd like to get the list back to something
considered respectable in the morning.

Thanks

Right here ----> http://www.radioreference.com/apps/db/?ctid=2648

The county-wide EMS is run by CareFlite, and is on the Azle Communications LTR trunk system noted at the top of the page.

You will hear all fire department dispatches on 155.295 except for Cleburne (154.145), Alvarado (154.445), and Burleson (their own LTR trunk system).

I think all police are dispatched by the Sheriff's Office on the Sheriff's east and west dispatch
channels, with the exception of Cleburne (155.01), Keene (155.9625), and Burleson.

It's pretty busy for a rural county. You'll hear some action.

Rob

Sure, if you live in Venus (where that repeater is located)
or if you have a tall outdoor antenna. Otherwise that freq
does you no good at all. Best bet for fire dispatch is 46.100
You'll only hear the dispatcher's, but it's better than nothing.

> except for Cleburne (154.145),
> Alvarado (154.445), and Burleson on their own LTR trunk system).

AND Keene Fire/EMS which has their own dispatch on 158.940 PL 71.9

With respect to "getting the list back to something considered
respectable"... Some of us like to be able to contribute to the list
periodically from a work computer -- especially since some of us are
the first to see & hear breaking news due to our jobs. But if you
choose to not moderate out the language then that will no longer be an
option for many of us.
No matter how funny the "joke" might be to some.

From: Tracey W. Singleton
Topic: 28331 Message: 28358

It's not the one time posts about an incident, it's the play by play I have a problem with...that's what tv's are for. A one-time notification would have sufficed. I've run with the big dogs, I worked the box probably a lot longer than you have. And while I've had my share of "good times". We kept that to our working peers as a way to relieve the day to day stress, and certainly didn't express things that way about the death of a child, especially to the public. A little callous in my book. Meekness doesn't even come into play here.

You cannot possibly be serious.

And since when did breaking news alerts become off-topic here?

Scanning is not for the meek. It's serious business. If you can't run with the big dogs, stay
on the porch.

Rob

I've known Rob for quite some time, and to be on a box longer than him, you're gonna have to nearly have been in class with Johnny and Roy. (Sorry Rob) Plus, keep in mind that Rob's 'Good Times' comment, was posted before the posting of the pedi fatality. We should try not to judge what people comment early in a call, based on how we feel about the situation after all the details come out.

BTW, noticed a lot of new names on here... 'Bout time for another get together?

Funny you should mention that! It's been over three months now, hasn't it? I have unexpectedly (and unfortunately) found myself stuck here in Texas again for awhile. We had a great turnout at Fuddrucker's last time, but there were still some notable faces missing.

Besides, it's easier to understand each other and who we are face-to-face than by e-mail.

How about it? Anybody game?

Rob

Hang on

...

gulp

...

Had to down my anti-snooty pill first first. :)

YES, another get together would be nice. If more folks could make it to these, I think they'd find that there aren't a bunch of "meanies" on this list. Since we had the last one Saturday at lunch, the poll shows the next highest votes (for day and time) is either a wednesday or thursday evening somewhere. Anyone interested in this?

If it's going to be during the week, could we make it around
say 7:00-7:30 ?? I live and work in Cleburne, and I don't get off
until 5:30. And it take's all of 40 minutes just to get from
Cleburne all the way over to I-35 in Burleson.
Anyhow, just my 2 cents worth.

I've got an idea! How about we all bring our grills, hot dogs and hamburgers and meet in the parking lot of the new one billion dollar Coach Jerry Jones Memorial Football Stadium and show those knuckleheads how to erect a crane properly?!!!

Seriously, a Wed or Thursday night would be splendid. We start gathering at 6pm, won't eat till around 7 or 7:30 until everyone has a chance to get there, and then visit and talk until they shut the place down and throw us out? Fuddruckers at Irving Mall was good, perhaps Mel can check and see if the room can be reserved in the evening?

Mark

F-35B STOVL Fighter Makes First Flight

Second Of Planned 19 Development Aircraft

With test pilot Graham Tomlinson at the controls, the short takeoff/vertical landing (STOVL) Lockheed Martin F-35B Lightning II streaked into blue Texas skies Wednesday, marking the first flight of an aircraft that will provide a combination of capabilities never before available: stealth, supersonic speed and STOVL basing flexibility.

<http://www.aero-news.net/#>

Tomlinson, a former Royal Air Force Harrier pilot now employed by BAE Systems, performed a conventional takeoff at 1017 CDT from Lockheed Martin's Fort Worth facility. As planned, all initial F-35B flights will be made using conventional takeoffs and landings, with transitions to short takeoffs, hovers and vertical landings beginning early next year.

Tomlinson guided the jet to 15,000 feet and performed a series of handling tests, engine-power variations and subsystems checks before landing at 1101 CDT. "A great team effort led to a relaxed first flight, with the aircraft handling and performing just as we predicted based on STOVL simulator testing and flying the F-35A," Tomlinson said.

The F-35B, known as BF-1, becomes the second Lightning II to enter flight test, preceded by the conventional takeoff and landing (CTOL) F-35A, which first flew in December 2006 and has completed 43 flights. The F-35B that flew Wednesday is the second of 19 System Development and Demonstration aircraft and the first to incorporate new weight-saving design features that will apply to all future F-35 aircraft.

Though nearly identical in appearance to the F-35A, the F-35B incorporates a counter-rotating shaft-driven lift fan positioned directly behind the cockpit. The lift fan, produced by Rolls-Royce, is turned by a drive shaft from the F-35's massively powerful single engine, which features a swiveling rear exhaust nozzle that vectors thrust downward during vertical flight.

The lift fan, engine and stabilizing roll ducts beneath the F-35B's wings combine to produce 40,000 pounds of lifting force. Converting the F-35B from STOVL to conventional flight and vice-versa requires only the push of a button by the pilot. The system otherwise operates automatically.

"We're absolutely convinced that this aircraft is going to only further enhance what is a tremendous asymmetric advantage that we hold in terms of controlling the air, taking advantage of intelligence, surveillance and reconnaissance capabilities, multi-sensor capabilities, and the ability, if need be, to drop a bomb in a precision strike," said Gen. James Conway,

Commandant of the U.S. Marine Corps.

Three versions of the F-35 will be produced. The F-35A CTOL variant will operate from conventional runways; the STOVL F-35B will fly off small ships and near front-line combat zones; and the F-35C carrier variant (CV) will be designed for catapult launches and arrested recoveries aboard the US Navy's large aircraft carriers.

<http://www.aero-news.net/#>

The F-35B will be the first of the three Lightning II variants to achieve Initial Operational Capability, beginning with the Marines in 2012. The STOVL variant also will be used by the United Kingdom's Royal Air Force and Royal Navy, and Italy's Air Force and Navy. With the capability to operate from a variety of ships or austere runways, the F-35B can deploy closer to shore or near front lines, shrinking distance and time to the target, increasing sortie rates and greatly reducing the need for support assets.

<http://www.sherlockspubco.com/Main.aspx>

Or something in north Arlington would work too.
I'm just thinking about something closer for those of down south.
Not that Irving isn't that much further up the road than Arlington;
I'm just throwing another option out there for consideration.

And I know it's going to be darn near impossible to pick one
location that works for every person on the list, but I figured
I'd throw my suggestion out there anyway.

28373. Re: Get Together

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-14 10:49:36 UTC
From: Brent Willcox
Topic: 1986 Message: 28373

I work days now, so I can't do the weekend day anymore, but I'd be up
for a Wednesday or Thursday evening GTG,
though I don't get off until 7 if it falls on a working day.

Closer to Dallas would be better for me go-juice wise (esp at $4/gal)

Wednesday night sounds best for those expressing a preference, as well as those who have little choice due to weekend jobs.

We have pretty much been alternating between Dallas and Tarrant County. If we are to keep that up, then Tarrant is due for this one. Anywhere around Six Flags (360 & the Turnpike) is pretty centrally located and offers one of the best selections of venues in the Metroplex (assuming there is no Ranger game that night).

Anything on Airport Freeway, either side of DFW Airport is good too, although a little far north for a lot of people, except for Blaine, haha. Still very central and offers a lot of choices though.

I like Mark's idea of start kicking off around 1800 and just take it to the limit. No harm in showing up fashionably late, so it's never too late to come after work! I don't think any of these things has ever lasted less than three or more hours.

Would that be a deal-breaker for anyone? Any kinds of food that anyone absolutely cannot/will not eat?

Rob

Me three. I work in Grand Prairie and have to drive back to Fort Worth
to let the dogs out and get them fed. I'm lucky to be done by 7 PM or so.

Why not a Saturday breakfast at one of the all-you-can-choke-down places
around town? This seems to work for other groups I belong to and there
are locations all over the metro-mess.

Baker street a good place to eat and they have free wireless, but it is a 51% place, so its all smoking indoors and the patio gets a bit warm this time of year.

Hooters or the other wing place in Arlington might be good. There is also a Baker Street / Sherelocks type pub over there somewhere in the same area.

Josh :
> escaped inmate
> if they have found him/her yet.

The "official" word :

A 23-year-old Parker County Jail trustee fled from a trash detail at the Parker County Justice Center this morning which prompted an area wide search for t he inmate around 1a.m.

Justin Lavon Berry of Scurry, Texas, was being escorted by a CEC Corrections officer to dispose of jail trash in a dumpster located just south of the jail sally port when he broke and ran... leading the corrections officer on a foot chase across Fort Worth Highway and behind the Weatherford City Garage.

Sheriff's deputies and Weatherrford police cordoned off an area south of the viaduct early this morning before the man was sighted again by WPD officers on the railroad track toward IH-20.

A DPS helicopter was used in the search but immediate efforts to recapture the man were unsuccessful.

A warrant for Escape has been issued for Berry... which carries a punishment of up to 10 years in TDC.

Berry was in jail on an assortment of misdemeanor charges was awaiting transport to a state jail facility to begin serving a 2-year sentence for a probation violation stemming from a Burglary Of A Building conviction.

Sheriff's investigators, the Fugitive Task Force and U.S. Marshals Service are involved.

Berry, 23, is described as 6'1" ... 170 lbs ... with light brown hair with patches of white ... brown eyes and with tattoos on his right arm and right shoulder. He was last seen wearing an orange jail issue shirt and orange and white striped jail-issued pants.

How about we do this:

A week from Wednesday (Rangers will be playing @ Houston) which is the
25th at the same wing place we went to in '06

Winghouse of Arlington
944 E. Copeland Road
Arlington, TX 76011
http://www.mapquest.com/maps/map.adp?address=944+E%2E+Copeland+Road&city=Arlington&state=T
X&zipcode=76011&country=US&cid=lfmaplink

Start time will be 7:30pm. I also work late, and have to go home, let
the dog out, etc. Hopefully that will be late/early enough (for you
nighttime folks) to eat. If you feel you need to eat earlier than that,
feel free to do so, but come join us anyway at 7:30 and we'll have some
fun.

I'd have agreed with the Irving Fuddruckers, but I went to a ham radio
meeting there a couple weeks ago - their back room (from the sun in the
evening) was over 95 degrees and waaay too hot to eat in - so hopefully
this idea works!

I realize we can't please everyone all the time; if you can make this
one - great - if not, hopefully we can do one that better suits you in
the future.

I'll have to call them to make sure they can accommodate us at that date
and time.

If you can make it, please rsvp to me offlist so we can get somewhat of
a headcount. If you've never been to one of these before - you should -
they're a lot of fun!

Hope to see you there.

28395. Garland System Multisite Sounds Good.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-18 19:11:55 UTC
From: Patrick Wrigg
Topic: 28395 Message: 28395

At lunch i noticed my scanner was coming in loud and clear at my office.

Sounds like they are keeping on the 2nd site and are now running a multi site simulcast system.

I get the occasional hetrodyne sound but its not bad, and the clicking at the end of each transmission from field units sounds like Voting Receivers.

I hope this helps with their coverage problems. Anybody else who had staticy coverage notice its better. At least on the west and north sides.

Aww that explains it. I was in Plano heading North on 75 at parker and I thought I was hearing Plano. Then I realized I was still on Garland as I had come out of Garland earlier. I couldn't believe how clear it was. I never pick them up that far out nor is it that clear.

So could someone explain so that I understand what they have done? 2nd site?

Jason

Jason, a Multisite system means they have 2 or more transmitter sites for that particular system.
Garland had one site located near Downtown at the old PD station on a 100ft tower. They then moved it to the super tall new tower at Beltline and Rowlett Rd. But this left bad spots on the north west side. So they have added a tower somewhere on the western side of town for added coverage. With this 2nd tower they operate simultaneously. So an officer keys up his radio, its picked up by one of the locations (or more if they have voting recievers) and re-broadcast on both towers. The towers are linked probably via microwave link and are synced up so they dont interfere with each other. All of this is done thru the main site controller.

Not sure i did the best of explaining it, or if i made any mistakes, so if someone else can jump in and fill in the gaps or correct me anywhere i was wrong please feel free to.

Agreed. I am near beltline / shiloh - better on both of my scanners.

I am hearing the techs doing some testing / aligning at this time.

28401. Question: Cell towers and interference

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-18 22:29:58 UTC
From: Jason Simpkins
Topic: 28401 Message: 28401

I don't know if this has been answered before so here it is. I hate it when I am trying to monitor something and I am near a cell tower. There is just so much interference. Today Richardson had something good going for a bit but I was right at the old mall by a cell tower and I could barley pick them up. So, when this rebanding starts will I still have this problem?

Jason

>So, when this rebanding starts will I still have this problem?

This probably doesn't answer your question
in exactly the correct vein, but FWIW, on
my PSR500 I use the regular ducky while
mobile instead of the Rat Shack 800. While
the Rat Shack 800 IS much more sensitive,
so is this scanner, and possibly yours as
well. There is just so much crap out there on
the airwaves, and not just music and talk radio
LOL. We are lucky we pick up anything at all.

It's amazing on a daily basis the junk we get
bombarded with that we can't even hear.
Seriously, go near a big transmitter, and see
how you feel. Many times it really affects
people.

twitch it doesn't affect me *twitch* honest!
(I work around those big transmitters every day)

28404. Tarrant County UHF Frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-18 23:49:04 UTC
From: rob.davis@armynursecorps.com
Topic: 28404 Message: 28404

I've got quite a few UHF channels programmed into my conventional scanner at the house, but I have come to realise that I never receive a damn thing there. Here's what I have:

453.0500 North Tarrant County VFD
453.2250 Lake Worth Fire
453.3000 Lakeside Fire
453.5750 River Oaks Fire 1
453.6250 Azle Fire
453.7375 Blue Mound Fire
453.7750 Saginaw Fire
453.8000 Eagle Mountain Fire
453.9250 Haslet Fire
460.3500 Benbrook Fire 1
460.4500 Benbrook Fire 2
460.5875 Dido Fire
460.6000 Tarrant County Fire
464.1000 CareFlite CERN
482.4375 Lake Cities Fire 2
482.4625 Everman Fire
482.6625 Watauga Fire 3
483.0375 Lake Cities Fire 1
483.4500 Watauga Fire 1
483.7000 Watauga Fire 2

The CareFlite CERN channel (also Dallas ISD on the same freq) is the ONLY channel on that list that I ever receive anything on, and even they come in weak. I have about decided that my setup is simply deaf on UHF here, but not completely. I receive the Burleson and Johnson County UHF LTR systems just fine, and Dallas PD and FD come in, albeit scratchy. So, before I do anything drastic, can anyone here confirm or deny the accuracy and activity of any of those frequencies?

Thanks!

Rob

Yes, a little clarification on the "nos" please. Do the departments not exist anymore, or are
they just on different frequencies? There used to be a Lakeside VFD at one time.

I usually have to lock Dido Fire out because of a constant open carrier on the frequency. Probably not even on that frequency proper, but it sure blocks that channel.

Rob

28408. Re: Tarrant County UHF Frequencies

Here are some fire Frequencies out of my scanner.
154.0550 Azle Fire / EMS 77.0
460.3500 Benbrook Fire 1 151.4
460.4500 Benbrook Fire 1 151.4
453.7375 Blue Mound Fire 118.8
151.0625 Briar Fire VFD 100.0
460.5875 Dido Fire VFD 114.8
453.8000 Eagle Mount. FD 131.8
453.9250 Haslet Fire 411
156.1800 Jack Co Fire 127.3
453.2250 Lake Worth Fire 123.0
155.3850 Lifecare EMS 136.5
154.2500 NE Parker Co. FD 162.2
154.3400 Parker Co. Fire 162.2
155.4900 Pelican Bay Fire 205
453.5750 River Oaks Fire 325
453.7750 Saginaw Fire 123.0
453.3000 Sansom Park Fire 351
453.5500 Westworth Fire 311
154.4450 Wise Co Fire/EMS 131.8

Lakesude that is between Lake Worth and Azle never,
in ny knowledge, had a VFD, there was Spillway VFD
some years ago close to Lakeside but closed down do
to money troubles. Lake Worth does fire call for
Lakeside now.

North Tarrant Fire closed down do to money troubles
also. I think Keller or Westlake does fire call for
that area now. Someone can correct me if I'm wrong.

Hope that helps

Both of those departments went down in the annals of infamy. Spillway had a volunteer who was babysitting the chief's daughter and decided it was a good idea to respond to a grass fire with the baby in the front seat of a fire truck with her. She rolled it, crashed, and
burned.

North Tarrant County had a serial arsonist on their roster who was busted when he decided to burn the church right next door to his house, leaving the gas can on his front porch for everyone to see.

I swear there was a Lakeside VFD at one time though, although it may have been many, many years ago.

Thanks for the updates, Michael! Those were helpful!

Did anyone hurt themselves when the fell on the floor LTAO???
Seriously, I have a RS Pro-90 that was given to me some years ago and it works fine for monitoring the local FD, etc. However, when I programmed it, I think I royally messed up the "pre-programmed" frequencies. Is there a software program available for this scanner and does anyone have any suggestions for programming both trunked and conventional freqs? Thanks in advance for any comments!

AVG - http://free.grisoft.com/

There's also ThreatFire both of which seem popular with the PC Mags such as Maximum PC. Just be aware that the latest versions of AVG and ThreatFire don't co-exist with each other, so just pick one.

I noticed yesterday that Dart PD 860.2375 pl 173.8 no longer is picking up on my scanner. Got stuck in traffic on LBJ and when that happens i tune them in. So this morning on my way to work same thing, no traffic. Anybody have any info?

28422. Lewisville System Rebanding and other news...

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-20 15:34:25 UTC
From: Brandon Thetford
Topic: 28404 Message: 28422

FYI for those who monitor Lewisville you may have already heard radio testing or traffic regarding re-banding and re-programming of radios. The fire department (and I assume the rest of the Lewisville radio system users) are getting their radios flashed for re-banding so that the new frequency tables are already in each radio. That way when they are ready to make the re-banding switch all of the radios will already be programmed. I was told that making the re-banding "switch" will now not be until 2010 or 2011 for the Lewisville system so those of us with older scanners will still have some use out of them for a couple of more years at least.

Also the Lewisville FD radios have been re-programmed so that LFD Channel 16 (the last channel in the radio) is actually LFD Channel 4 (For Structure Fires). This was done so that if a firefighter gets off the fireground channel for some reason he can switch his radio all the way to either the last channel or the first channel and either be on the fireground channel or dispatch for emergencies. That makes it easy to get on the right channel in the dark with bulky firefighting gloves on. It really won't make a difference for those programming scanners but I thought it might be interesting to know.

The Highland Village and Lake Cities Fire Departments are still sharing dispatch centers through Highland Village dispatch. They have changed their channel responses to mimic what Lewisville FD does. Channel 1 is dispatch, Channel 2 is EMS, Channel 3 is for Misc. Fire Responses (Fire Alarms, Grass Fires, Vehicle Fires, Investigations, etc.) and Channel 4 is for Structure Fires.

That is all...

I shot some video of it. Will have it up tonight. Call came out around 1:20 pm I think. Not sure of the stuff on scene but I took pics and video for whoever wants to see. This was near coit and Spring Creek on Horizon. 2 houses were damaged one possibly a complete over haul I guess you call it.

I'm hearing a patch between Irving and Grand Prairie PD on decimal 555. Then Irving asked GP to run a license check. Also, EOC is calling fire dispatch, but not receiving an answer.

Anyone heard any details or know if Irving is having some dispatch or comm center trouble?
Ben

28430. [Fwd: [dfwscan] Get Together Please RSVP]

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-22 17:01:26 UTC
From: Mel's mail lists
Topic: 28430 Message: 28430

Just a reminder about the get together THIS Wednesday night. Thanks to everyone who's RSVPd already. If you're planning on attending, please email me offlist so we can get a good estimation of how many tables to put together.

Thanks!

-Melissa

>
How about we do this:

A week from Wednesday (Rangers will be playing @ Houston) which is the 25th at the same wing place we went to in '06

Winghouse of Arlington
944 E. Copeland Road
Arlington, TX 76011
http://www.mapquest.com/maps/map.adp?address=944+E%2E+Copeland+Road&city=Arlington&state=TX&zipcode=76011&country=US&cid=lfmaplink
<http://www.mapquest.com/maps/map.adp?address=944+E%2E+Copeland+Road&city=Arlington&state=TX&zipcode=76011&country=US&cid=lfmaplink>

Start time will be 7:30pm. I also work late, and have to go home, let the dog out, etc. Hopefully that will be late/early enough (for you nighttime folks) to eat. If you feel you need to eat earlier than that, feel free to do so, but come join us anyway at 7:30 and we'll have some fun.<

28431. DFW Brush fire

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-22 18:12:48 UTC
From: Ben Saladino(YG)
Topic: 28431 Message: 28431

Well it's over now, but there was a chance to monitor DFW Airport DPS working a large grass fire with Irving, Euless, and Fort Worth. Normally, DFW is not scannable on their own EDACS Provoice system. However, for this incident, they were patched into Irving on decimal 13 and fireground 3 decimal 533. I think they may have also been patched with decimal 550.

I had hoped to get a good photo of an ARFF unit working(a rare opportunity), but they had traffic blocked, and there wasn't a good safe place to stop. Here's what I did get while driving and holding down the shutter release on my camera.
http://www.bensware.com/firetrucks/dfwairport32workinggrass.jpg

Even though you may not be interested in listening to Irving, Euless, Grapevine, etc, it's a good idea to have those systems available for the next big incident at the airport.

Happy Scanning,
Ben Saladino, KC5IRJ

Yes... a new tower came online several months ago in fire district 2 on Treatment Plant Rd behind the city maintenance facility and next to the fire and police training center. It has affected reception in some areas especially on the south side of the city. Where I work at firehouse 3 now on Corporate Dr. there are areas where you can't even understand the dispatcher when getting information. They are still working on trying to get better signal down here but it's been awhile now and I don't know if they are going to get it to work. It would seem that they could make it a multi-site system and put the rockbrook tower back in service but I bet they don't have the money for that. In the meantime we're suffering with some really bad reception. I wasn't aware of the dead spots until I moved down to this station a few weeks ago. Now I know that when we leave the station and drive on corporate or 121 you can't hear the radio until you get to I-35 on Corporate or Round Grove off of 121. It also affected my scanner reception at home in Flower Mound although not nearly as bad as it has at work.

I just replaced my Davis Weather Monitor II after about 20 years of near-continuous operation (it finally gave up the ghost...inside unit's display hasn't worked in 3 or 4 years after a lightning strike, but all the data collection and PC interface was still working). Replaced it with the Vantage Pro2. $650 from Ambient Weather.
Includes a solar-powered wireless outside unit that collects rainfall, temperature, humidity, wind speed and direction and has a fan-aspirated temp/humidity chamber. Also added a USB PC interface. You can get a step-up model that adds sunlight and UV sensors (about another $400). Installation took about 2 hours (but I already had a short mast up on the roof for the WMII's wind sensor, so that probably saved an hour or so).
I use Virtual Weather software, which automatically collects the data and also makes a nice set of web pages out of the info: http://home.flash.net/~opie
While the price is a bit higher than you imply is in your budget, spread out over 15-20 years of operating life, it looks a lot better, especially considering the functionality and low maintenance (other than moving stuff around when the roof got re-shingled and replacing the anemometer after the same storm that took out the roof, I never had to touch the WMII the entire 20 years).
Paul

Welcome to the new world order of things for me.

Now you know why I posted "OK who the #&$# broke the Lewisville system!!!"

Its much better than it was in the first week or so, though. Then the
whole thing was just lovely
nasty crackly noises and bits of conversations. Its not digital, or
then I'd just be enjoying a nice serenade from
our favorite Star Wars droid.

Some days the system's actually pretty decent, some days its still total
unlistenable [expletive].
Even on its best day, though, it still doesn't match the coverage from
Da Rock.

What's weird for me, though, is when its working, I sorta hear Coppell,
Highland Village, and Lake Cities/Lake Dallas, with the Mound
and Lewisville proper usually worse off.

Now, how Coppell's 800 gear works at all on the back side of Vista Ridge
without Rockbrook, I still don't know. I figure there's still
at least gotta be a receive site there.

Station 3, as well as my place, are just about due south of the new site
with antennas on the north side if I recall correctly.
I suspect a nice cardioid-shaped NULL because of the tower legs in this
direction. I guess I'll have to take another jaunt
up there and reconfirm that. If so, maybe moving the antennas to the
west side of the tower would help us out, but would
then probably screw District 5 up.

But then again, I'm just a dumb ham that only "thinks" he knows a little
something about how RF actually works in the real world
(grin)

Switching gears in this thread, does DPS Sherman still have that one
chick dispatching for them that sounds like she's maybe 10-12 years old?

Ed and all.....sources who have their fingers in the Fort Worth rebanding indicated to me that it will likely be 2 to 3.5 years before their radio systems will actually be switched to new frequencies down the band.

They also said that they are looking at a system rebuild or an upgrade, including a switch to digital, but right now it's only just looking.

If a switch to digital came at all, their best guess is that it would likely be after the rebanding.

28448. Get Together Tonight

To any of you radio people out there who might have adapters laying around, see if you have a Mini U female to SMA female.

I have a convertacom in my truck that i am thinking is starting to fail, lots of signal loss, but I need to test it by plugging in my antenna directly into the radio. And the one adapter I used to have is missing. SO if anybody has one they can bring and let me test out for a whole 5 minutes please bring it tonight.

Thanks in Advance.

28449. I-30 Construction

From: daweasel@swbell.net
Topic: 28449 Message: 28449

FYI for those attending the meet and greet tonight. According to the signs I passed this morning on the way to work, it looks like I-30 eastbound will be closed at Fielder at 9 PM for construction. Probably to put the decking on the bridge beams they installed over the weekend. I assume they will have traffic routed onto the access road, as they did last weekend, which means traffic around the Wing House will be a real bear. Might want to check the TXDOT web site for details.

Wow thanks for checking on that! Just my luck - I checked the Rangers schedule, didn't bother checking the I 30 schedule (or lack thereof!) Hope everyone can make it anyways! Looks like getting there (at 7) won't be the problem, but leaving might be. Maybe they'll get a late start!

By the way, I called these guys and they know we're coming. They said they'd let us have their "back room" (I didn't realize they had one) and I told them it was for DFW Scan group (Whether they wrote that down or not, I'm not sure).

Hope to see everyone there!

Thanks to Mell for pulling this together!
It was nice to put some faces with names..
Would've put some more names with faces, but decided to bail early due to arriving storms and being on "2 wheels"!
As it was, I made it back to Allen with only about 5 raindrops finding me, so whoo hoo for that!

CYA again next time :-)

Krum is dispatched off of the Denton CO TRS, under the sherrif's ID's, they have their own unit numbering system much like the collin county system does.

28461. what are these?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-27 06:06:15 UTC
From: Mel's mail lists
Topic: 28461 Message: 28461

There are obviously multiple transmitters, and it's some kind of data type stuff, but listen on 464.500 if you're near Grapevine or Arlington and 469.500 if you're in (north?) Dallas (I heard it all the way down I35E from Carrollton to downtown tonight) - The buzz I heard sounded like multiple transmitters/beacons transmitting with an occasional "beep". The beeps I heard showed up stronger on my S-meter of my radio than the hum, and at several occasions I could hear multiple beeps - at different signal strengths - as if one was close, the other farther away. I haven't tried DFing them yet, but it'll be a pain considering there are multiple signals on the same freq. Anyone have any suggestions on where to look?

Thanks in advance!

-Melissa

Seems like that's the freq (464 side) I get a close call hit on every time I go to FTW on I-30. The hit is about Collins or maybe just west. If you're going to DF that would be a good place to start.

DART PD moved to Ch4 Supervisors 859.2375. I assume this is temporary while they fix their Ch5 repeater.

Now my turn for a question!

Which radio system, or conventional channels, are the DART HOV trucks on? Not the DCSO black & white trucks, the Yellow DART trucks with the large arrow boards & Liberty lightbars. I've listened to the 900 EDACS system but never heard them dispatched to incidents on the HOV lanes.

Thanks
Jonathan

They were on the DART PD 800 frequency,
but perhaps they have since moved. I used
to hear them, or so I assumed it was them,
along with HOV patrol, when I did radio
traffic. But honestly, I haven't listened
to them in three years or more.

>but listen on 464.500 and 469.500

>Anyone have any suggestions on where to look?

Medium to strong in eastern Flower
Mound and parts of Lewisville. Got
so bad at the house that I had to lock
out both itinerant frequencies. Sounded
like the same kind of data beeps from the
water pump data stations that you sometimes
hear up around 173 mhz.

I can't imagine a business using those
frequencies in those areas of the metro
without tone...Talk about a constant headache!

28468. Chlorine Leak Rowlett

There is a Chlorine leak at the City of Rowlett Wet Park 5300 Main Street.All of Rowlett Fire/EMS units on scene,Garland and Sachse Fire/EMS units doing mutual aid at Rowlett Stations.About 30 victims have been taken to Lake Point Hospital and Baylor of Garland by Rowlett and Garland ambulances. Rowlett ID's (3248-Dispatch,3280-Ops.1,3312-Ops.2)

28469. Johnson County LTR starting to test?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-28 05:50:44 UTC
From: rob.davis@armynursecorps.com
Topic: 28469 Message: 28469

A few hours ago, I had to lock out 153.890 (Hood County Fire, Alvarado Fire, and former Dallas Fire) because of constant on-and-off keying every two seconds. Took me awhile to finally realise it was an LTR control doing it. I am assuming this is part of Johnson County's new system coming online? Seems weird that they would get coordinated for a system right on top of Hood County's system like that. They are very close, and Johnson County's keys were interfering with Hood County pretty badly.

Anyone have any info on this?

Rob

28470. Amateur Radio Field Day

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-28 15:40:23 UTC
From: Ben Saladino(YG)
Topic: 28470 Message: 28470

Today is Amateur Radio Field Day, and the Bedford Amateur Radio Club is already setting up a pretty impressive camp and antenna farm at the Bedford Boys Ranch, just north of the pond. If you are interested in ham radio at all, today would be a great day to stop by their setup and visit with amateur radio operators and learn more about it. I think they plan on being there until early evening.

There are plenty of other local clubs participating as well.

28471. Re: Johnson County LTR starting to test?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-28 15:55:26 UTC
From: Chris Easley
Topic: 28469 Message: 28471

153.890 is Ch. 1 on the Cleburne site of the Passport system.
154.445 is Ch. 2 and 155.145 is Ch. 3

I still trying to figure out why in the hell they would use the
Alvarado freqs on the Cleburne site, knowing the close proximity
to Hood County. Seems to me that the logical place for the
Alvarado freqs would have been on the Alvarado site.

Frequencies for the Alvarado site are:

Ch. 1 - 154.0925
Ch. 2 - 158.940 (still in use by Keene Fire/EMS)
Ch. 3 - 155.295 (still in use as a repeater in Venus)

On a separate note, last night Cleburne FD was dispatching
off the PD channel. Not sure if this has to do with a possible
move to the Passport system or if they were having radio problems.

Chris

> A few hours ago, I had to lock out 153.890 (Hood County Fire,
Alvarado Fire, and former Dallas Fire) because of constant on-and-off
keying every two seconds. Took me awhile to finally realise it was an
LTR control doing it. I am assuming this is part of Johnson County's
new system coming online? Seems weird that they would get coordinated
for a system right on top of Hood County's system like that. They are
very close, and Johnson County's keys were interfering with Hood
County pretty badly.

Today is Amateur Radio Field Day, and the Bedford Amateur Radio Club is already setting up a pretty impressive camp and antenna farm at the Bedford
Boys Ranch, just north of the pond. If you are interested in ham radio at
all, today would be a great day to stop by their setup and visit with amateur radio operators and learn more about it. I think they plan on being
there until early evening.

There are plenty of other local clubs participating as well.

Here is a little more info on the "mysterious" control channel on 155.505. I made a trip out to Frys on 635 northeast of DFW and got a good strong signal in that area. I put my GRE PSR 600 in tuning mode and auto modulation to see what it would decode. It decoded as a P25 channel, I am assuming a control channel since it is continuous. It decoded a NAC of 007, and briefly a WACN of 092 (I think, it was very quick and I never saw it again). It never did give a system ID or any other info. I also never heard the sound change like I would expect it to if there was voice traffic on the system like the Motorola control channels do. I only listened for a few minutes, and then turned the volume down and left it there for awhile while driving back, glancing at the display as often as I could while driving. I never saw anything change.

This does not sound like the digital signal on other DPS channels when you listen to them in analog mode- to me those sound more like static. It does sound like this:

http://www.radioreference.com/digital/dig/mot-new.wav

I can ocaasionally here this channel while mobile in the North Richland Hills area, but it is sporadic and usually very, very scratchy and decodes as a 3600 baud Motorola control channel. I cannot receive anything at home with a discone in the attic with LMR 400 that receives most everything else that I would expect to hear fairly well.

Eric

---------- Original message from <blaine.brooks@...>: ----------

> Yeah, pretty sure. I have a GRE 600, plus the transmissions are >continuous, not intermittent like voice traffic would be. It >sounds exactly like a Motorola control channel to me.

Ok. Hopefully these will not sound like stupid questions, but:

When you are listening to this frequency, do you
have your GRE 600 in auto mode tuning or FM mode?
If you have in auto, try turning it to FM. See what
it does.

How strong is the signal? So when you program it in,
and are listening, all you hear is what sounds like a
trunking control channel. So, there has never been
any decoding of the signal into a voice element (like
the scanner is attempting to decode the P25 "buzzsaw"
but the signal is just not strong enough into the
scanner)? Occasionally, this will happen on digital
scanners (happened on my PRO-96 and happens also on
my PSR-500). Occurs when distant signals (such as -
for me - Grayson County or DPS) gets into the radio,
and the radio just doesn't have enough signal strength

to decode. So it justs defaults into the "buzzsaw", but never clear voice. Digital signals are very fickle with these scanners. The scanners themselves are excellent at decoding, however, you have to have a good signal level going into them. Faint signals or even borderline don't cut it most of the time.

Lastly, are you hearing it on the duckie antenna or an outdoor elevated setup?

Hi Eric & Group,

I haven't heard the 155.505 transmission/data yet but have noticed (what sounds like) the same described signal on 159.09 about a week or two ago. For two days it was sporadically there, but it wasn't constantly there. I'm not really sure what it was. It sounded slightly different than the RR.com link posted but it didn't sound exactly like an analog scanner tuning in a P25 transmission either. Both frequencies are DPS so...?

28479. Unidentified Repeater on 154.055 near Rockwall

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-06-29 03:51:09 UTC
From: rob.davis@armynursecorps.com
Topic: 28479 Message: 28479

Tonight I began receiving a fairly strong repeater on 154.055, which is the Azle Fire primary channel. Male and female units numbered in the 9000 series, all sounded like they were working some kind of street festival with "bike patrols", "fire watch", "missing child", "show time", and "backstage". They also mentioned being able to see fireworks from Rockwall. I don't see anyone except for City Of Athens public works licensed for that frequency that is anywhere near Rockwall, and Athens isn't licensed for a repeater.

Anyone know who or what this was?

Rob

Hey Rob & Group,

There may be some skip/ducting going on tonight. I'm hearing some UHF traffic I'm not familiar with.

Did you get a PL tone on the 154.055 frequency? Here's what I have for the frequency:

154.0550 136.5 Keene PD/FD Johnson
154.0550 77.0 Azle PD/FD Parker
154.0550 88.5 Blue Mound PD/EMS Tarrant

Everything else I have for this frequency is much farther out (i.e. Longview PD) and may not even be accurate information/up-to-date anymore.

I'm listening to 464.225 with a DCS of 165. It is a mall security and J.C. Penny's, AMC Theater, Jack in the Box, etc have all been mentioned. This is humorous really. These guys call in to "surveillance" and they seem to be bent on kicking everybody out of the mall for violations. "APD" is on scene for a criminal trespass deal with three black males right now and a woman was told to leave the mall about an hour ago because her skirt was too short and she was playing with kids in the kiddy playground.

The signal is starting to fade now and is not clear as it's been the last 1 1/2 hours. I wish I knew who this was just to add it to my database :)

Hello Jason and the Group!
You are picking up one of the active Rowlett Fire Department
Frequencies, also currently being used at this time by the Rowlett CERT
Team.
We have the Rowlett Freedom Fest and Amateur Radio Field Day going on in
Rowlett this weekend.
154.055MHz is being used by the Rowlett CERT Team and 441.325Mhz is
being used by the Rowlett R.A.C.E.S. to provide additional volunteer aid
and support for the welfare of everyone out here at Pecan Park in
Rowlett, Texas.
Having Fun in the Sun!
There is a carnival, various vendors, music, and concert with fireworks
later tonight.
Happy Listening!
Charlie

Brian,

There was two things I heard and didnt catch anymore details. First thing I heard was PD req FD for CO2 testing for a car running in a garage, then there was a drive by in east side. As usual the patrol channels were quite about it all. I did hear on the CSSU ch. about the body in the drive way but do not remember if it was before or after the drive by (CO2 came first.)

Maybe there will be something about it later?

Just after typing that I read the news. That was the "drive by" I was mentioning. I was listening before PD was o/s til after they requested CSSU. They never did mention anything about the situation other than what you heard on CSSU. They were running on E. Patrol/2160. again there wasn't much, PD never closed the channel.

Seems like they are getting more and more low key here lately. It is hard to follow or catch much anymore.

Pet peeve: That would be CO testing, not CO2. CO2, or carbon dioxide, is contained in the air we breathe every day. Carbon MONoxide (CO) is the toxic gas.

Hi All,

I'd set the DVR to record Fox 4 at 5 PM on Sunday and watched it a little earlier. According to Fil Alvarado, the on scene reporter, a few guys were working on a car in a long driveway in the 4200 block of Little John. Originally, the call went out as a drive-by but when PD got there it wound up being that a person had walked up and shot one of the guys working on the car. He reportedly was not a resident of the address and was in town visiting that day. There was no mention of robbery on the news, and just taking a wild guess with no facts to back it up, I'd bet it was either a gang deal or a revenge deal. Hopefully there'll be some sort of follow-up on the news.

Thanks for the reply...

Brian

Brian,

There was two things I heard and didnt catch anymore details. First thing I heard was PD req FD for CO2 testing for a car running in a garage, then there was a drive by in east side. As usual the patrol channels were quite about it all. I did hear on the CSSU ch. about the body in the drive way but do not remember if it was before or after the drive by (CO2 came first.)

Maybe there will be something about it later?

Topic: 28490 Message: 28490

Know there are some Paris folks here. Just in case anyone was listening they had a really nice fire. It's up on youtube:

http://www.youtube.com/watch?v=Wv9dIAaMiAk
<http://www.youtube.com/watch?v=Wv9dIAaMiAk&feature=related>
&feature=related

That's video one, there's 3. The 3rd has a nice either collapse or flashover (lots of fire coming at the camera).

More than likely a ton of stuff is passed
over cell phones, pagers, text, or the MDT's.
Look at it this way...except for an emergency,
there is really no need to relay any voice
traffic on the radio on a routine or crime
scene investigation. Details, location,
pretty much everything, can be relayed over
MDT or by other means than the radio.

Sounds like this is The Parks at Arlington on South Collins near I-20.
WQFT224
Just looked up 464.225 on the FCC ULS Search Engine.
There is a Jack-in-the-Box just to the north, and AMC and JC Penney are part
of the mall.
As for APD, what can I say...
Now about the lady with the short skirt. All I can figure is that she must
be the type that it just doesn't work well for her. If she was
good-looking, what guy in their right mind would throw them out?
Maybe it wasn't a guy, but an insecure gal with a badge.

I checked my verified frequency list and what I have for that frequency and tone is the maintenance frequency for the Parks At Arlington. I have a big list of frequencies that I verified for the DFW area as well as my frequency range scan lists and retail scans on my web page if anyone is interested.

It worked! The suspect is in custody! Here's the release:

SUPECT IN MULTIPLE SHOOTINGS ARRESTED

Garland Police have in custody a 22 year old male they believe is responsible for six shootings that started Sunday afternoon in Garland and expanded into Mesquite, Richardson and Plano over a three day period.

Garland, Mesquite and Richardson Police saturated an area on the Garland, Richardson and Plano boarders Tuesday afternoon in an effort to locate the shooter who had been shooting at occupied vehicles at various intersections along with one possible shooting on IH 635.

Early Tuesday evening the suspect struck again on George Bush Turnpike in Plano on the Richardson boarder. Police verified from witness accounts the shots were fired from a black 92-98 Honda Prelude with an oversized chrome exhaust.

At 9:05 pm Tuesday night a black Honda Prelude pulled into the parking lot of a Garland restaurant located in the 4500 block of West Walnut, only a ½ block from one of the shootings that occurred on Sunday. According to witnesses the driver stopped the car, got out, walked several steps towards the restaurant, pointed a pistol toward the west wall and fired two rounds into the wall just below the windows. He then turned, walked back to the Honda, got in and drove away. The bullets did not penetrate the restaurant wall and no one was injured.

At approximately 10:30 pm a Garland Police Officer spotted a black Honda Prelude on Lawler and Yale, approximately ½ mile from the restaurant shooting. He made a traffic stop on the vehicle and the male driver matched the description of the person who had shot at the restaurant. He was taken into custody without incident. A pistol was found inside the car believed to be the weapon used in the shootings.

The man is being held in the Garland Jail and is facing charges for the Garland offenses of; 2 counts-Aggravated Assault-Deadly Weapon, 2 counts-Endangering a Child, 1- Deadly Conduct. Bond has not been set at this time.

Yeah, it's a universal phenomenon that is so obvious that the Texas Transportation Institute commissioned a study on the matter in 2005. The results were obvious, that HOVs are an abject FAILURE, and create more problems than they solve. Yet, far be it for state or local government to just say "no" to any stupid idea that will net them federal dollars. Consequently, we're stuck with stinkers like DARE, fire-based EMS, Affirmative Action, and HOV lanes forever.

Rob

==========
From: http://www.thenewspaper.com/news/02/292.asp

Study: HOV/Carpool Lanes Cause Accidents
Texas Transportation Institute study finds that non buffer-separated HOV lanes cause a 50 percent increase in injury accidents.

A newly released Texas Transportation Institute study suggests that High Occupancy Vehicle (HOV) or carpool lanes that are not separated from regular lanes with a physical barrier experience a 41-56 percent increase in injury accidents. Almost all new freeway lanes are set aside for HOV use only because federal environmental regulations strongly favor their use.

The main benefit promised by HOV lanes -- faster travel for carpoolers -- is what causes the accidents, according to the study. During peak traffic times, the speed differential between the regular lanes and HOV lanes ranges between 21 and 35 MPH. For example, a slower car trying to merge into the HOV lane may be rear-ended by faster moving HOV traffic that cannot slow down in time. Overall, the general purpose traffic lane closest to the HOV lanes experienced a 153-188 percent increase in injury accidents.

The study examined 1,150 individual crash reports from the I-35 and LBJ Freeways in Dallas, Texas from 1997-2000.

Full text of study available below in a 1.8mb PDF file.

Key Statistic:
Dallas corridors with buffer-separated concurrent flow HOV lanes did show a change in crash occurrence with an increase in injury crash rates. The IH-35E North corridor experienced
a 56 percent increase in the injury crash rate. The IH-635 corridor experienced a 41 percent
increase in the injury crash rate. [Page 2]

The average number of injury crashes in
Lane 1 of IH-35E from 1997-2000 is 153 percent higher than the 1990-1994 average. The average number of injury crashes number in Lane 1 of IH-635 from 1997-2000 is 188 percent higher than the 1990-1994 average. An increase in the other general-purpose lanes was noted for
both corridors; but, the increase is not as substantial as the Lane 1 increase. [Page 30]

Article Excerpt:
The research team identified three key findings from the crash data analysis of Dallas corridors with buffer-separated concurrent flow HOV lanes.
Increase in injury crash rate
Increase in injury crashes primarily focused in the HOV lane and the adjacent general-purpose lane (Lane 1).
Increase in injury crashes is likely due to the speed differential between the HOV lane and the general-purpose lanes. The general-purpose lanes experience congestion during peak periods, while the HOV lanes usually operate at the speed limit.
[Page 3]

The increase in injury crash occurrences in Dallas corridors with buffer separated HOV lanes is likely due to the speed differential between the HOV lane and the adjacent general-purpose lane. [Page 43]

0612am, Friday, 4 July, I just heard Cleburne Fire tone out on a medical run on 154.445. For the last few days, this frequency has been getting LTR status bursts (dead keys) every ten seconds, but no voice, except for Wise County's fire repeater coming in. This is the first time I have heard a voice transmission from anyone in Johnson County on this frequency, outside of Alvarado's input transmissions, which stopped a week ago.

By the way, this was a repeated channel I heard this morning. I heard both the dispatcher and the fire station replying.

Also hearing some sort of digital data bursts frequently on 154.145 that may be from the same system.

It would appear you have the radio programmed correctly. Here's a link to a page with all the info in case you didn't know:

http://www.radioreference.com/apps/db/?sid=65

Richardson's system is not very strong so you may be out of range? Check to make sure you don't have the channels locked out. Other than that I'm at a loss.

Topic: 28506 Message: 28508

Last night a little after midnight, I heard Cleburne FD run a
medical call on 154.445 and then a little later I heard Alvarado FD
on the same freq run an assault call. Did not hear Alvarado on
the input freq 153.890. So that tells me that they are on the
new system too.

Strange that Alvarado isn't using frequencies on the Alvarado site
of this system. But then again, little has made sense about
this new Passport system.

Still hearing county fire on 46.100, so their not on the system yet.

Fyi.

Terry

The following is from the U.S. Consumer Product Safety Commission website (http://www.cpsc.gov/cpscpub/prerel/prhtml08/08319.html <http://www.cpsc.gov/cpscpub/prerel/prhtml08/08319.html>):

RadioShack Recalls Power Supplies Due to Electrocution and Fire Hazards

WASHINGTON, D.C. - The U.S. Consumer Product Safety Commission, in cooperation with the firm named below, today announced a voluntary recall of the following consumer product. Consumers should stop using recalled products immediately unless otherwise instructed.

Name of Product: 13.8V DC Power Supplies

Units: About 160,000

Importer: RadioShack Corp., of Fort Worth, Texas

Hazard: The recalled power supplies are wired incorrectly, posing electrocution and fire hazards.

Incidents/Injuries: None reported.

Description: The recall involves RadioShack 13.8V DC Power Supplies, catalog numbers 22-507 and 22-508 with date codes from 08A04 through 01A08. Date code format is MMAYY where MM is the month and YY is the year. The catalog number and date code are located on the back of the power supply. Power Supplies with a green dot on the product and the product's packaging have already been repaired and are not included in the recall.

Sold at: RadioShack stores nationwide from October 2004 through January 2008 for between $50 and $85.

Manufactured in: China

Remedy: Consumers should unplug the recalled power supply immediately and take it to any RadioShack store for a free repair. Registered owners of the recalled power supplies will be mailed a notice.

Consumer Contact: For additional information, contact RadioShack at (800) 843-7422 anytime, or visit the firm's website at www.radioshack.com/recall

I posted the last one fast. Anyway I have this down in my scanner as Hunt County Car to Car and all the sudden I hear DPS 101 on there and they are talking to Garland. Telling Garland that their system is not working or something and if they could leave that channel open so they could reach them and relay back or something. I can't hear Garland though only DPS. They keep telling DPS 101 to go back to Garland TAC 2. DPS 101 has also been refering to some term but forgot what it was while I was typing this. So is this like a back channel to Garland or what?

they are talking to Garland. Telling Garland that their system is not
working or something and if they could leave that channel open so they
could reach them and relay back or something. I can't hear Garland
though only DPS. They keep telling DPS 101 to go back to Garland TAC
2. DPS 101 has also been refering to some term but forgot what it was
while I was typing this. So is this like a back channel to Garland or
what?

Hello Jason and the Group!

154.950 is "Texas Law 1"
It is one of many Interoperability Radio Frequencies (channels) in
Texas.
Please see the following Link for one version of the big picture!
What you were hearing was going on in Garland at the Firewheel/190 area.
Maybe you need to get a bigger/taller antenna for better reception
further from your house?!
:-}
http://tsiec.region49.org/MOU+TSICP01-22-08.pdf

Happy Scanning!
Charlie

That's like the wire barricade they put up on I-20 in Kaufman County.Good theory, bad application. I got in trouble for sending an email to TXDOT thanking them for increasing our call volume with that brilliant idea. They defended it like it was O.J. Simpson. Now, two years later it is gone on the eastern side of the county. Why? Probably too many claims against the state for accidents that would have been simple run off the road and no damage but the "trotline" totaled their car. Or the 18 wheler that was eastbound and crossed the 150 yard median through the trotline and into the tree line on the westbound side. Almost1/4 mile from run off to stop, and the barrier failed to do what it was designed to do. Hate to see how much they lost on that deal.

Artificial intelligence is no match for natural stupidity.

It's 03:00 hours, and there's a lot of activity on Climer (or Klimer).
I set my scanner's mode to CT and it identified 173.8. Is this
indicative of a trunk system?

>I know they've had problems in Atlanta

Atlanta native here, but they incorporated
HOV LONG after I moved away, so I can't speak
for that. However, I CAN tell you traffic there
is HELL. MUCH worse than DFW. I used to sit
in it, and report on it...:)

>It's only a solid line , not a real
>barrier

Exactly. It's meant to be abused and
cheated on simply by design. Morons
who ever thought it up. A solid line
does NOTHING to enforce.

I can only use St. Louis as an example,
but THERE they did it right. A big
concrete barrier dividing the HOV lane
from the main lanes of the highway. In
other words, when you enter the HOV lane
brother, you are committed!. There ain't
no weaving in and out of the HOV and fast
lane to get around people and all that BS.
You only enter and exit at certain points.
You don't just hop on and enter/exit
wherever you damn well please.

Yeah, it's makes for a nightmare if there
is a bad wreck in the HOV lanes, because
you're basically stuck there. But, on
the flip side, you don't have idiots
swerving in an out on rice rockets going
100+, or their new Expeditions or Hummers,
just because they think they're &*^$!
doesn't stink, and they don't have to sit
in traffic just like everyone else!!.

173.8 is just the CTCSS tone used. Dallas
PD does not operate on a trunked system,
except for some Deployment Units who
have their own discrete talkgroups on
the City Of Dallas Local Government
system. General patrol though - no -
that is not trunked.

Alvarado is online as well. Heard them running a few grass fire
calls last night. Some of the calls were in their district and others
were mutual aid with Keene FD.

Cleburne FD had to put out one grass fire that was caused by the
fireworks show out at Lake Pat Cleburne.

So far all I've heard on the new system is
Cleburne FD and Alvarado FD. Shouldn't be long before
county fire goes on-line, I would presume.

Sansom Park PD and a few other western Tarrant County agencies still use it sometimes. I know many of these same agencies (most using 453 & 460 MHz frequencies) still have 155.37 in their dispatch centers, but most (if not all) of them never can figure it out when they're trying to talk with FWPD's Air 1 or another agency. I've heard Lake Worth PD wait 30 minutes on a perp search for a Tarrant County SO unit to come out and assist with talking to Air 1. LWPD (who still has 154.95/155.37) wanted to leave one of their officers with a TCSO unit and use TARANT1 to talk to Air 1. Needless to say, after 30 minutes and Air 1 circling the area while becoming perturbed (they know how to use 154.95/155.37 and even tried in this case), once contact was made and details were given, everyone knew the use of Air 1 was pretty much not needed anymore so Air 1 left after 5 minutes. But what can you do but listen?

I think so many of the dispatchers have probably come along after the heavy use of the "Intercity" 154.95/155.37 days (pre TRS days) that they just don't know about it or get trained on how it works. But it does still appear to be around in many police cars and in dispatch centers but it just isn't used very much...

I don't think Rat Shack is long for the business world, myself. I don't see how they can stay in business without SERIOUSLY reworking their business model. And obviously, radio communications products (cellphones excluded) have no place in their plans. You can't even buy a scanner antenna at most of them anymore. They just tell you they're all "web only" items now rather than even look for it.

I went into a Rat Shack recently to buy a coax jumper. The salesman glanced down at the Bearcat 996 on my belt and immediately started trying to sell me "a better cellphone". He had no idea that it was a scanner. Nuff said.

But yeah, Cellphone and iPod Shack would be a much more appropriate moniker these days, and would certainly attract them more of the business they are attempting to cater to.

It may be a scam of some kind. I've never heard of "VAV" either.
Whether that's someone's initials, or supposedly a company, who knows.
However, the shipping point in Hutchins is a major hub for Fedex
ground. Whoever shipped it may have dropped it off there, or at a drop
off box, & Hutchins is the first place it was really 'scanned'.

Here's the bottom line: Open the box in the presence of the Fedex
delivery person.

If it's really a scanner with no C.O.D. charges, accept it.
If it's a scam without a radio, refuse delivery. You now have a witness to it.
If it's a bomb that goes off, take satisfaction in knowing that the
cops will work twice as hard to solve a double homicide than the
single death of a dumb guy opening a suspicious package.

I think that problems with HOV lanes and traffic will decline as we move to a price of $4.50 a gallon for gasoline and higher. I just read an interesting study that supports a price of $6.40 per gallon when the price of oil is $200 per barrell. I am sure all of us can make the best of this situation by moving our IRA and 401(k) investments to the energy industry. With an increasing price for gasoline, we can all stay home and listen to our scanners and watch our energy investments appreciate in value.

From: commscan
Topic: 28531 Message: 28531

Hi Group,

I'm hearing some VHF-Lo skip this morning. I've been listening to 42.38 for a while and have heard multiple PS users on it. One, with a PL of 173.8 mentioned an address of "1606 Rushing Springs out of Monroe" and Cornhusker Casualty Company (insurance I believe) too. I've had no luck with the FCC database and Google Earth/MSN Visual Earth locating this user. I'm also hearing what may be a Canadian PS user using the PL tone of 141.3. I say it may be Canadian because a DL return came back to a Toronto resident.

Here's the weird part. I am receiving Mineral Wells DPS at times. This is not bleedover/intermod, but then again, I don't know that it is right either. At least it isn't sensible with what I know about DPS.

If you have a chance, and if you like DX'ing, you might want to try the VHF-Lo band today.

A little update here...the "Mineral Wells" station had a return that came back to Charlotte (NC presumably). MO, NC, & WI seem to be the major states listed on the FCC database with this frequency, and even though I haven't looked to see if there is a Mineral Wells, NC, I imagine NC is where one of the users most likely is...

42.38 PL 173.8 is Missouri State Highway Patrol Troop G in Willow Springs.
There is a Mineral Wells, WV but I don't know if it has a state police station.

If you know they are idiots, why talk to them? Just look up what you need online, get the part number, then go to the store and ask for that part number.

Hi Tom, John, & List,

Thanks for the information guys. There were actually 3 or 4 agencies I was picking up on the frequency through 11: 30 AM or so. I thought Missouri State Highway Patrol was one of the VHF-Lo users still out there, but I wasn't really sure.

I'd planned on searching the VHF-Lo band some more earlier today, but when the blower motor in my air conditioner's air handler went out, the roofing crew started tearing off and replacing the roof on my house (finally), and the temperature started rising, I quit messing with the Lo band stuff. I felt like a turkey in the oven being cooked today.

I'm hoping the band will open up again tomorrow. I've always enjoyed the DX'ing side of monitoring...

42.38 PL 173.8 is Missouri State Highway Patrol Troop G in Willow Springs. There is a Mineral Wells, WV but I don't know if it has a state police station.

I never knew that before you posted this. But just now I heard Hutchins FD dispatch EMS to FedEx for a person who "is conscious, but not breathing". You don't hear that one too often in an adult, lol!

I'm curious if this turns out to be a temper tantrum, or if the dispatcher is just an idiot.

Subject: [dfwscan] VHF-Lo Skip/DPS Mineral Wells?

Hi Group,

I'm hearing some VHF-Lo skip this morning. I've been listening to 42.38 for a while and have heard multiple PS users on it. One, with a PL of 173.8 mentioned an address of "1606 Rushing Springs out of Monroe" and Cornhusker Casualty Company (insurance I believe) too. I've had no luck with the FCC database and Google Earth/MSN Visual Earth locating this user. I'm also hearing what may be a Canadian PS user using the PL tone of 141.3. I say it may be Canadian because a DL return came back to a Toronto resident.

Here's the weird part. I am receiving Mineral Wells DPS at times. This is not bleedover/intermod, but then again, I don't know that it is right either. At least it isn't sensible with what I know about DPS.

If you have a chance, and if you like DX'ing, you might want to try the VHF-Lo band today.

Brian

28539. Help With Buying the Right Handheld Scanner -

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-09 19:46:31 UTC
From: Code 3 Productions
Topic: 28539 Message: 28539

I finally got rid of my last Radio Shack scanner, though great scanners, I have decided to move on. I am tired of having to try and filter words and sentences out of my radio transmissions, through horrible cellular repeater interference.

My BCT15 dosent pick up the interference like the R/S scanners do, and I would like to know what a good handheld scanner would be along the lines of the BCT15. I need something that is easy to program, prefferably with the same cable and software I use for my 15 (BCTool)

If anyone has any suggestions, let me know, It just seems that alot of new scanners have hit the market lately, and I havent kept up that well, Now I need personal opinions from owners.

Thanks

To keep this scanning related, be sure to listen to the DART police channel for the enforcment of HOV lanes.

>> Yet, far be it for state or local government to just say "no" to any stupid idea that
>> will net them federal dollars.

Those dollars should not have been federal dollars to start with. It amazes me that citizens of each state hand over their money in federal income taxes to the federal government just to jump through hoops to get it back to their state. HOV lanes have been forced down our throats. What happened to states' rights?

So much of our government has become "if it saves one life", then it is worth others suffering from some new law. However in the HOV lanes in Texas, forced by the government, countless number of lives have been lost by poor design decisions. Go figure!

>>I think that problems with HOV lanes and traffic will decline as we
>>move to a price of $4.50 a gallon for gasoline and higher. I just
>>read an interesting study that supports a price of $6.40 per gallon
>>when the price of oil is $200 per barrell.

Yea, and I just read a story that the oil bubble is about to burst. Speculators have artificially drove up the price just and it can not be sustained for that long.

I took some pics of the MVA yesterday that was paged out on IPN at Central and Haskell. Figured it was down the street from my apt so i might see how it looked. Then they added the 6th MICU and 2nd EN and TR so figured it had to be huge.

I know they transported several people code 3 from the scene, and to me looked like only 1 car was involved.

I took some pics if anybody is interested.

Anybody have any more details of the wreck? Suprisingly fireground simplex channel was very very quiet. But i guess when the scene is only 1 car and not very spread out yelling works great.

28550. Keene Fire/EMS on Johnson County Passport

Just heard Keene Fire dispatch do a set of test tones on
the new Passport system. Don't know if they are just now going
on-line or if they have been on-line for a while.

I find it strange that Cleburne, Alvarado and Keene are going on-line
before county fire dispatch does. County fire should have been first
to go on-line, as they have the greatest need for a communications
upgrade. IMO anyway. Maybe there's more to the story, but I sure would
of thought that county fire would have gotten priority status.

Chris

I ended up with a bc246, but when I was bidding on Pro-92s I won an eBay auction that had two of the RS part number 20-289 cables. I believe these are for the Pro92.

The information on the cable here:
http://www.starrsoft.com/software/Win96/Cables/cables.html
suggests it's a correct cable for the 92 (scroll down below the USB stuff). Please do your own research and confirm these will be useful to you; I have no Pro92 to confirm that they like each other.

They are still in the unopened packaging. The packages are a little beat up from handling/mailing as one might expect from eBay closeout merch or something like that.

I'd like to get my $$$ back on them if possible. I'll sell/ship them first class for $13 together or $8 seperately. Otherwise I'll let them sit on my shelf here until I repost them on eBay.

(BTW, I love the bc246 I ended up with!)

Pls email me directly if anyone's interested in one or both. I can upload a pic if needed.

28557. New Scanner

Yahoo group: dfwscan (2008 — 2009)

Don, DFW uses ProVoice and CareFlite Passport. The manufactures of these radios have not licensed them to scanner manufactures so no a digital will not receive them in trunk fashion. For the record passport is analog but has a proprietary control scheme so you can scan them, just not trunk-track.

That said I would encourage you to buy digital. That is the way things are going and at a fast pace. On your side of the world Mansfield and Grand Prairie are digital. DPS has also gone digital.

As far a sensitivity goes it's hard to tell. I've heard the PSR 500/600 may be too sensitive leading to overload and an inability to receive. For me the PSR offers only one interesting feature, the ability to decode and monitor using NAC (network access code). It's kind of like PL. About the only real use currently is to monitor one DPS station while excluding others that are on the same frequency. I would suggest you take a look at the Uniden 996 and 396 (mobile and handheld). I have 3 of the mobiles and 1 of the handhelds and are pretty satisfied. The display, programming and control method are really nice. They get slow if you scan many systems at the same time and I think that's the biggest complaint I've heard.

That's my opinion for what it is worth!

Terry

28559. C.B. is opening up??

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-17 09:33:59 UTC
From: Jonathan Kelley
Topic: 28559 Message: 28559

Greetings all,

Today I did some much needed work on the coax for my Austin Spectra mobile rig. I smashed the BNC connector accidently so decided to solder on a PL-259 connector. I then grabbed a PL-259 to BNC converter and slapped my scanner on.

Immediately I began hearing things on CB like I never have before. I've had the CB frequencies in my scanner since day one. I've only heard someone on it for about 10 seconds once at work.

As soon as my scanner started scanning on the new cable, it seemed like it was Field Day for C.B.ers. People from cost to cost were on every channel talking. Not a dead frequency out there. I heard Missouri, Oklahoma, Mississippi, Nevada among others. I was totally blown away by the event.

Has a sun spot developed that made this possible? I know my soldering wasn't *that* good!

Is there a way to track future sunspots?

Speaking of CB I have a question. I have a 2053 that I use for scanning in the truck and when I scan cb frequencies I get nothing. I travel 150 miles a day. I have it tuned to 19 and some others and I get nothing. I also pass 2 truck stops in the morning. So, the other day I was at a flea market and a guy was demoing 2 hand held cb's. I was parked right next to his booth and asked to borrow one of them. I put the cb on 19 and my scanner on 19 and got nothing. Though the 2 cbs picked each other up without any problem. I was like no way.

Now I do have an 800mhz mobile antenna on the truck. But still I would think being that close it would pick it up. I even opened the squelch all the way up and got nothing. Whats up with that?

Jason

28562. 482.3875 PL 210.7

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-17 14:04:43 UTC
From: Matthew
Topic: 28562 Message: 28562

I have been hearing talk on 482.3875 PL 210.7 the past couple days that I have been trying to identify. I can heard them talk all day and into the evening all throughout North Dallas and up into mid Plano. What I am hearing sounds like some type of a convention center. I have heard talk about opening the doors for a certain group of people at 5:15pm and then for everybody else at 5:30pm. Also I have heard them mention a variety of halls that go from Hall A to E. As well I have heard them talk about which direction to set elevator 15, 16, 17, 18 & 19. This leads me to the conclusion that this is a big convention center or some type hall. I did a check on the FCC list but there is nothing that would match this. The only one I can think of is the Convention Center in Dallas but they are on the Dallas City Trunk. If anyone has an idea what this is let me know!

It's Mary Kay time again in Dallas. You're hearing the activity from the Dallas convention center. I think they've rented approx 100 or more radios and that freq is one of the ones they use for logistics. On a side note, anyone wanting to see the biggest collection of pink Cadillacs in one place at one time, check out the convention center this weekend. :)

28565. What is Dallas PD signal 46?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-18 01:18:46 UTC
From: scottbomb
Topic: 28565 Message: 28565

They used it tonight and it was code 3, lots of elements responding.
FD was dispatched and the DFD web site called it an "injured person".
The only other clue I got was an officer saying "he's still firing".

Confusing because a shooting is sig. 19 and assist officer is sig. 15.

Now the media is on scene....

Incident is in N Central div. on Thacker.

28566. DPD Signal 46

I hate to gripe. but, I went to Google, typed in Dallas Police signal 46, and the very first return was a PDF from Dallas City Hall's website with as much detail as you'd ever want.

Mike, I think CIT is Crisis Intervention Team. Essentially, a Sig 46 is the same as a Fort Worth "psycho violent" - someone who has fallen off their nut and needs a large dose of Haldol. Certain officers are supposedly trained to deal with mental emergencies, so you get them, three other officers, a supervisor, and a box.

Good thing we didn't use Fort Worth's signal list -- unless there is a
Dunkin Donuts at that address.

Jason,

800mhz is a mile away from the HF that CB operates on. Your performance if any will be poor.

I agree you should hear a blip or something a few feet away. I am
willing to bet your scanner was not set in the AM mode Some scanners
only do FM. Many CB rigs support SSB operation. If the CB transmits in
SSB you won't hear a peep with a radio in FM mode because the receiver
can't demodulate that signal.

Now I do have an 800mhz mobile antenna on the truck. But
still I would think being that close it would pick it up. I even opened
the squelch all the way up and got nothing. Whats up with that?

Jason

Back on topic to my original post it seems that I heard Sporadic E open up the band. No sunspots came recently.

It seems I really need to upgrade to my general FCC license so I can
start on HF when the sunspots pick up. Imagine if the HAM bands were as
busy as the C.B. was.

The C.B. was ugly, tons of people intentionally interfering and
screwing other peoples signals up. However on amateur HF it should be
nice.

How amazing the radiowaves can be!

Holy Jeebus! Twenty-four units? Did this guy have multiple personalities, or what?

As for the code 46 thing, I always oppose the use of codes, but ya know... sometimes there's just really no nice way to say certain things, so maybe codes have a place every now and then!

My elderly Dad lives there (Renaissance at Preston Hollow) & told me today, so I wasn't aware yesterday.

He was sitting in his dining room & heard a lot of noise/saw police lights right outside his apartment & went to the window. He said there were about 13 police cars & people all over the place. When he asked what was going on, he was told a mentally unstable person had "gone off their meds" & was threatening to shoot people.

My feeling is when a person "goes off their meds" 1 time, they'll do it again. Hope they keep this person somewhere to prevent them from hurting themself and/or others!

They do non-emergency transfers in Mineral Wells and Weatherford.
I still haven't figured out what radio system they use, I think either Nextel or one of the LTR systems in Weatherford.
Here is their web site http://www.guardian-ems.com

I live in the neighborhood. The sirens woke my wife and I sometime around 4:45 AM. Once Battalion 1 asked for the second alarm, they had all six Richardson engines assigned. Dallas E29 filled in at Richardson Station 1 and Plano E1 was at Station 4. If there were other mutual aid fill-ins, I did not hear them. The last units cleared from the fire scene at about 7:50 this morning as I was leaving for work. I drove by the house. It was a two story house that looked pretty well gutted.

Hi Josh & List,

HOPD has been on their own frequency for a year or so. Yhey've3 been using 155.580 with a DPL of (ha!...I never entered this one on my list) ???

I know it is a DCS/DPL tone they use and not a CTCSS tone, but either way, they're on 155.580. I'm pretty sure they're FD is on a 150 MHz (as well as the TRS freqs.) frequency as well.

I'm pretty sure radioreference.com has the Hudson oaks frequencies. I'm going to be parking on 155.58 now and waiting for that DPL to pop up :)

28601. Another Irving patch

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-22 23:14:36 UTC
From: Ben Saladino(YG)
Topic: 28601 Message: 28601

Decimal 260 was used to patch FireGround 3 (decimal 533) to D/FW Airport while they assisted on a large grass fire on the east side of the airport, near Valleyview.

Here are a few photos of ARFF 31 and 12 working some hot spots. No flames, just smoldering brush.
http://www.bensware.com/firetrucks/DFWBrushFire/

It sure would be neat to drive one of those.

Ben

28602. Richardson FD, OnCor, and Live Electrical Wires

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-23 02:08:51 UTC
From: Jeff Mullowney
Topic: 28602 Message: 28602

At Tuesday morning's two-alarm on Flat Creek, one of the problems was a live electrical wire downed near the swimming pool in the back yard. OnCor was sent for, and took 30-45 minutes to get on scene. As they arrived, the Batt Chief had asked Dispatch what was their ETA. Dispatch replied that OnCor told her "another 30 minutes". The Batt Chief replied that the OnCor tech was just arriving.

At another fire some months ago, there was a live electrical wire going from a pole to the house connection by the garage. The house had a fire in the ceiling in the garage, but because of the live wire, the firemen coudn't approach. OnCor was called for and took ONE HOUR to get to the scene.

Another time, the RFD dispatcher was told to contact OnCor. She used the same 800 number that you or I would use when requesting a service call, and reported to the on-scene commander that she was ON HOLD.

And with the ice this year, the dispatcher was told that all available emergency response units were committed and she would have to wait at least an hour. Also, the nearest unit was based in Plano, the second-nearest was Carrollton (I think) or further west (like Irving/Grand Prairie area).

These listening experiences lead to the following questions:

What is it with OnCor? Their "emergency response units" appear to be anything but - they don't seem to be bona-fide emergency vehicles equipped with lights and siren (like the gas company uses). Their response times are a joke, and they don't appear to have a dedicated phone line for city/state/whatever emergency services to use when requesting them. Being placed on hold? Please.

Why can't Richardson FD cut the wire at the pole? Especially when it is preventing access to a fire (garage incident) or the firefighters have to work around it (Tuesday's fire).

Can someone please fill me in?

Thanks.

Well I think the honest truth is for whaever reason the City of Dallas is the only ones that benefit from the emergency response units. On a side note I contacted Atmos gas for a gas meter that was struck and gas was flowing from it and when I called them a second time to update the address they never had any record of me calling to begin with needless to say the guys on the engine werent very happy and neither was I but what can you do.

Hi everyone. I now live near Caddo Mills in Hunt County, and for the last week, each morning about 8:30 there have been several large flights of military helicopters heading south. Yesterday while listening to DFW Tower, they reported a flight of 7 helos also heading south. Anyone know what is up? Just normal maneuvers? Other than normal ATC freqs, are there any mil-air freqs commonly used for air-to-air comms between these groups? I believe these are all Army helos.

Thanks for your input.

FWIW - Any brush fires or wildfires up in your area
lately?

Army helos could be assisting Forestry with air drops.

Other than that, probably just regular maneuvers.
From my experience listening, most (as you stated)
just use regular ATC (many don't even use UHF).
Many will ID as "Army XXXX" or "Guard XXXX"
I can't imagine the boys from Hood up here, but I
guess that's a possibility.

As far as a/a tacs, the only ones through the years
that I've confirmed have been 242.4, 242.6, and 242.9,
primarily for the Grand Prairie guys, but they have seen
sparse use.

Thanks Blaine, that's what I was looking for. I'll give those a listen. I'm too far away from a remote antenna site to pick up the controller side of ARTCC, so it's usually a one-sided conversation. Occasionally I'll pick up Cumby RCO, but rarely. Most of these helos are low altitude so they traverse Majors Field's airspace. More than likely they are pre-positioning for the hurricane, but it doesn't make sense that they return the say day. I'm leaning more towards some exercise, or maybe it's DEA in disguise. They did find a HUGE pot forest down here the other day. DPD Air 1 scared all the dopers out of Dallas and they all came down here!

Hi Tracey & List,

I was not where I could listen yesterday but there were multiple military helicopters landing (or practice flying) into NAS Ft. Worth. I mean there were a lot. That's why I say they may have been doing some sort of practice approach training? I don't know how many there were and my vision doesn't allow me to see them well enough to tell what they were.

If they come back I'll be sure to try and catch some information from the tower (or maybe CloseCall since I'm right in the flight path of the base)...

Subject: [dfwscan] Military Helicopters

Hi everyone. I now live near Caddo Mills in Hunt County, and for the last week, each morning about 8:30 there have been several large flights of military helicopters heading south. Yesterday while listening to DFW Tower, they reported a flight of 7 helos also heading south. Anyone know what is up? Just normal maneuvers? Other than normal ATC freqs, are there any mil-air freqs commonly used for air-to-air comms between these groups? I believe these are all Army helos.

Thanks for your input.

Tracey

BTW, I meant to say I'd figure there were 5 - 10 of them (it was an unusually high number for NASFW) and after 5 or 10 minutes they'd make another round (presuming it was the same helicopters circling back).

28614. Duncanville Code 200

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-07-23 21:39:45 UTC
From: rob.davis@armynursecorps.com
Topic: 28614 Message: 28614

Duncanville/DeSoto/Cedar Hill (never really sure which is which these days) dispatched fire assets to stand-by at the Dairy Queen on Hwy 67 late last night for a "Signal 200". Regional has the worst dispatchers in the Metroplex, but she sounded especially weird when dispatching this one, so it was obviously something that had her excited.

I dunno what a Signal 200 is. Chances are, half their firemen don't either. But I am assuming it is either a bomb threat, or a special operations deal, like a raid, hostage, barricaded person, or drug lab stand-by. Anyone know? Other than this, aren't they using the same codes as Dallas PD? Not that it matters since I don't know DPD codes either, but at least I can look those up.

Also, does anyone have a list or even a map of Duncanville-DeSoto-Cedar Hill fire assets and radio numbers so I can tell who is who?

Thanks guys!

Rob

You should proably make sure you dont have any employees from regional on here before you start making comments about how horrible the dispatchers are.. If you would like to apologize for that I would be happy to assist you with your questions

Well, to be clear, I speak only of the fire dispatchers, and best I can tell, they are all female (at night, anyhow), so I don't think any of them are here. I never listen to cop dispatchers there or anywhere else, so I can't comment on them. They may be the best in the business for all I know. I know there are some "Regional" and city fire people here from the actual departments. I went to medic school with one of them. But yeah, Regional's fire dispatchers are pretty bad. No apologies for that. You'd think they'd be more concerned with improving than with sugar-coated reviews from anonymous critics on the Internet anyhow.

But thanks for your offer.

Rob

ROFL! That's funny right there, I don't care who you are! :D

But anyhow, maybe they were ferrying supplies down to the coast in preparation for the storm. They do ship assets down to be staged for these things without actually putting military assets into place to stand-by. Of course, it's summer, so there a lot of manoeuvres
and bivouacs going down throughout the week, but I'm betting it was storm prep.

From: rob.davis@armynursecorps.com
Topic: 28621 Message: 28621

Speaking of things heard on the radio that turn out to be something completely different, I woke up to some weirdness coming from Cleburne this morning. I turn on the scanner around 0900, and the first thing I hear is a Cleburne firefighter saying, "MAYDAY MAYDAY MAYDAY!! I'M OUT OF AIR AND I'M NOT SURE WHERE WE ARE!" Talk about an immediate attention getter! However, there was no freaking out on the radio, and nobody even replied to the guy until about five minutes later when he repeated that desperate message, and "command" finally said he was sending a RIT team in.

While all this is going on, other CFD units are running a medical emergency somewhere else, and landing CareFlite at yet another completely different location. Because of that, I came to figure that the "Mayday" was an exercise at Nolan River Mall. Can any of our Johnson County friends confirm or deny that?

I apologize if this possibly has been asked
before, but has anyone on the list ever
confirmed TXDOT trucks actually using
this frequency in the metro area (supposed
to be statewide truck to truck)?

FWIW - The TXDOT trucks working on the
FM 2499/FM407 project have a low band
antenna (or so it SEEMS because it is much
longer than a VHF) and an 800mhz pigtail.
Wonder what 800 system they are on? Or
perhaps it's just the Denton Co units?

Cody,

You probably called the number that connects to the people who have the information on where the lines are buried. So they buried your call request!!! Seriously, I have to wonder if anyone ever calls that number before they dig because of all the gas lines that are hit. Or maybe they do call and simply get bad information?

And just for the record, I have no opinion (good or bad) on the quality of dispatchers at the Regional Dispatch Center! You're not dragging me into this argument!!!

I remember the days of Dallas Power & Light. They would request
DP&L "Code 3" and the DP&L truck with red lights and siren would show
up in minutes - even way out in North Dallas where there weren't any
fire stations (except for 56). You would think this is something
they would still do. I never saw Texas Utilities and now OnCor go
anywhere code 3 or even have those trucks with red lights an sirens.
Do they still have these dedicated units?

I don't think they do, or if they do, they don't use the emergency equipment anymore. I've heard Dallas units call 660 & ask for Oncor/TXU "Code 3" for serious incidents, only to be given a canned response that Oncor no longer responds 'Code 3', but they'll ask for an expedited response.

Rob,

The Dallas County Fire Stations map & address listings in the files sections here in the group will show you the respective station locations/addresses for the three cities.

I don't have an equipment listing for these cities, but their numbering system is straight forward:

Cedar Hill- 21+x, with x representing the station number.
So you'd have Engine 211 (engine from Station 1), Medic 212 (an EMS unit from Station 2), etc. They prefix the numerical designator with the equipment type.

Desoto- 26+x
Engine 261, Medic 262, same pattern as Cedar Hill. The "26.." identifies it as a Desoto unit, the third digit is the home station.

Duncanville's prefix is "27", so you have Engine 271, Medic 272, etc.

In some cases, there may be both a Medic & an Engine at a station, but only staffing to man, fully, one piece of equipment at a time. I seem to hear this more with Desoto, where an engine will check enroute, & notify dispatch that their station's medic unit is now out of service (or the medic responds, & notes the engine is out due to lack of manpower).

From: Code 3 Productions
Topic: 28631 Message: 28631

Does ANYONE . . Have a Programming list for the BCTool Program, that has the entire DFW Area? I totally lost my entire programing list, and all I have left on the computer (Without having to re-write the entire programming) is the Plano/Allen area.

If you have a program list, please let me know, I'd like to get all my stuff back in the radio, without spending the week(s) trying to reprogram the entire metroplex into BCtool

Thanks

I've got a set up in UASD format...actually in the files area of the group (about a year old...). They are under BCD996T, but should work just fine in the BCT15.

Thanks! Very helpful. I notice that Lancaster prefixes with 23x (if I remember correctly), so I
guess all Dallas County stations originally had a prefix back in the early days, as they did in
most counties around here, including Tarrant. It's interesting to me that any in Dallas County
still utilise those prefixes this many years later.

To anyone who took offence to my opinion of Regional fire dispatch, you most likely are not who I am referring to, unless you are female and dispatch fire, so try not to get too sensitive.
I don't get all bent out of shape over generalisations if I know they do not apply to me personally. And regardless of whether you are any good at your job or not, I do at least appreciate your efforts and service! ;)

Interesting how things have changed since my old dispatching days. Back then, there was one gas company, one electric company, and one phone company, so it was easy to get the right person and the right response. Now it must be a nightmare of endless phone calls to get someone to finally claim a broken pipe or downed or cut line.

The interesting part is that, as easy as it was to get the right utility company, there was a
different emergency phone number for fire, police, and EMS in every city, town, and unincorporated patch of land in the state. At least all that has changed for the better!

Lets add some fuel to this fire...

On the way home from the server pit yesterday, I happened to pass an Oncor truck (most likely headed to the yard at Young and St Paul) eastbound on Young

This truck had a red and blue light bar on top of the cab, and the word "EMERGENCY" quite clearly emblazoned on the bottom of the doors on the side of the cab.

I should have grabbed a pic with the camera phone but didn't think about it at the time.

So, if Oncor is claiming not to run code to downed wires, why do they have trucks equipped with red and blue bars, which, according to the laws as I know them, are only authorized for law enforcement?

-b-

Oncor does own and operate emergency response units which i believe were part of the contracted deal when TXU bought out DP&L. This was one of the stipulations. One of my neighbors' sons runs one of them and I have, as recently as two weeks ago, seen him tear out of the driveway with lights and sirens on... I think they have VERY specific response criteria for their code 3 units.

(not sure what those are)

> So, if Oncor is claiming not to run code to downed wires, why do they have
> trucks equipped with red and blue bars, which, according to the laws as I
> know them, are only authorized for law enforcement?
>
> -b-
>

Actually, there is no "blue" requirement for Law Enforcement in Texas. There are some laws like that in other states but Texas has never adopted it. There are some strange combinations out there. At one time, I think I even remember MedStar even ran with Red and Orange lights but I am getting old and my memory fails me at times...

Since I see in past posts the subject comes up from time to time, here is the Texas Statute on it:

§ 547.702. ADDITIONAL EQUIPMENT REQUIREMENTS FOR AUTHORIZED EMERGENCY VEHICLES. (a) An authorized emergency vehicle may be equipped with a siren, exhaust whistle, or bell:
(1) of a type approved by the department; and
(2) that emits a sound audible under normal conditions at a distance of at least 500 feet.
(b) The operator of an authorized emergency vehicle shall use the siren, whistle, or bell when necessary to warn other vehicle operators or pedestrians of the approach of the emergency vehicle.
(c) Except as provided by this section, an authorized emergency vehicle shall be equipped with signal lamps that:
(1) are mounted as high and as widely spaced laterally as practicable;
(2) display four alternately flashing red lights, two located on the front at the same level and two located on the rear at the same level; and
(3) emit a light visible at a distance of 500 feet in normal sunlight.
(d) A private vehicle operated by a volunteer firefighter

responding to a fire alarm or a medical emergency may, but is not required to, be equipped with signal lamps that comply with the requirements of Subsection (c).
(e) A private vehicle operated by a volunteer firefighter responding to a fire alarm or a medical emergency may be equipped with a signal lamp that is temporarily attached to the vehicle roof and flashes a red light visible at a distance of at least 500 feet in normal sunlight.
(f) A police vehicle may, but is not required to, be equipped with signal lamps that comply with Subsection (c).

The remainder of the code is here:

http://tlo2.tlc.state.tx.us/statutes/docs/TN/content/htm/tn.007.00.00054\
7.00.htm
<http://tlo2.tlc.state.tx.us/statutes/docs/TN/content/htm/tn.007.00.0005\
47.00.htm>

Hope that answers some questions...

Terry,

When Regional (SWRCC) was established, if I remember correctly, there was a news article, either in the Snooze or possibly the Duncanville paper, that Lancaster was expected & invited to participate. However, I believe that they ultimately declined at the time, because they had just spent xxx dollars remodeling/upgrading their own dispatch center.

The dispatchers that I'm hearing on Lancaster do not sound like the ones I'm hearing on the Regional channels in the same time frame. I think the door was left open for them to change their mind & join in the future.

Just FYI, any "authorised emergency vehicle" may utilise any colour of lights they choose, according to state law. There is no one colour reserved for any particular service. And to muddy the waters, any political subdivision (city, county, state, special district, ISD, etc...)
may designate whoever they want as an "authorised emergency vehicle", utilising some pretty broad criteria.

Several years ago I worked for Flower Mound animal services. We came across this very issue when we prepared to buy our first new truck in several years. The supervisor at that time wanted red and blue since we were a police unit. But since we were not LAW ENFORCEMENT we were limited to only amber, blue or combination of amber and blue. Red would have been illegal.

The law is confusing, but you are incorrect. We are also way off topic...

Red, white, and blue are restricted to two things: authorized emergency vehicles, and use SPECIFICALLY DEFINED in the Transportation Code. That is to say - brake lights, reverse lights, turn signals, etc., all of which are specifically delineated.

Emergency vehicles are required to have four red lights ("...shall be equipped..."), two front/two rear, spaced as high and wide as possible, alternating. Volunteer firefighters responding in their POVs using lights/siren are exempted from this requirement (makes running a mini-bar or a dash light without external lighting legal).

An authorized emergency vehicle (police/fire vehicle, vehicle of a municipal service agency authorized by a governing body, volunteer firefighter POV, ambulance, organ transport, etc.) is allowed to use red, white, or blue lights ("...may be equipped..."), along with any non-restricted colors (green, amber, purple) as much as they please, when running on an emergency response. There are rules (not laws) such as NFPA which suggests certain lighting for fire apparatus, KKK for ambulances, department policy (such as no white to the rear, white to the front disabled when stopped, etc.), etc.

I can break all of the relevant transporation code sections down if someone really wants me to...

Terry

A couple of days ago in Saginaw, Texas, I noticed that a construction supervisor's pickup had blue oscilating lights on the top of his truck. Having worked for a police dept, I was pretty sure this was illegal?

On 7/25/08, Michael DeLong <sharryd@...> wrote:

any vehicle can have blue or amber as long as they don't incorporate red.

Correct, that is illegal by the letter of the law. All the security vehicles running around with blue or amber/blue, plus the construction vehicles, are technically illegal. Enforcement, however, is a different matter.

The TxDOT trucks are covered for red/blue, as are the courtesy patrol/DART HOV/etc. vehicles. Tow trucks are also allowed red/blue/white, but they may only run them while blocking public roadway at the direction of emergency personnel (it may say peace officer, I can't recall).

Terry

Kind of what I thought but wasn't sure. Not a whole lot newsworthy goes on down there so I'm not down there much. Of course tonight they did burn the Lancaster's fire chief's house to the ground! Thanks for the update.

Terry

Terry,

When Regional (SWRCC) was established, if I remember correctly, there was a news article, either in the Snooze or possibly the Duncanville paper, that Lancaster was expected & invited to participate. However, I believe that they ultimately declined at the time, because they had just spent xxx dollars remodeling/upgrading their own dispatch center.

The dispatchers that I'm hearing on Lancaster do not sound like the ones I'm hearing on the Regional channels in the same time frame. I think the door was left open for them to change their mind & join in the future.

Wow, I didn't realise that was his house! I dispatched that one to IPN and listened to the whole thing. Command told them to keep it defensive from the very beginning, but it sounded like firefighters kept going in anyhow, and he had a hard time getting them back out. I thought that was a little weird. Now it's starting to make sense. Was it a pretty big
house?

From the video it looks large. 4 has decent video and it may be up on the web. Here's the press release:

FIRE AT LANCASTER FIRE CHIEF'S HOME

Lancaster, TX - Firefighters were dispatched to Lancaster's Fire Chief Dick Knopf's home in the 300 block of Houston School Road at 8:24 p.m. tonight on a two alarm fire. The fire is suspected to have started in the garage. Lancaster's fire department received mutual aid from Desoto FD, Dallas FD, Waxahachie FD, Red Oak FD, Ovilla FD and Hutchinson FD.

The fire is under investigation and information will be made available as it comes in.

I got to listen to that call. Heard command tell dispatch to set off the evacuation tones, and ten minutes later they set them off. Don't know if it was dispatch error or the endless chatter on the radio.
Why don't they do like everyone else and use three short blasts of the air horn and/or siren?
Did anyone hear anything about a firefighter in Kaufman County getting hurt last night?

Artificial intelligence is no match for natural stupidity.

The video is on Channel 4's website I will include the link. Dallas
County Fire Marshal is investigating and says that so far the cause is
that the suburban exploded for a undetermined reason.

From: Tom ND5Y
Topic: 28660 Message: 28661

I think they are some type of seismic sensors for oil & gas exploration.
I have seen similar ones here in the Mineral Wells area that had several small
boxes with cables connected to a bigger box with an antenna.

If I'm not mistaken, those are the transmitters that send seismic data back to a central site. There are usually several geophones located nearby that are plugged into it. They are all over southwest Fort Worth at this time. First encountered them over in Gateway park last year.

Back in the dark ages they would put out a grid of geophones hardwired to a seismic truck and set off an underground explosive charge and 'map' how long it took for the sound to reach each sensor. This would give them a 3-D representation of the rock formations in the area. Now days that have a big vehicle with a massive vibrating weight that creates the sound waves.

From: Toby Zidle
Topic: 28660 Message: 28669

They may or may not be seismometer strings. (It's a definite 'maybe'.) It depends on what's connected to the box off-camera. If it's a dozen or more earth spikes with round caps above ground, wired together at intervals of about 20 feet, the odds of being an exploration tool go way up. If there's not much else with what was pictured but a bunch of wire on the ground, then it's not used in exploration. If it is exploration, you should see transmitter units every 200-300 ft. (50-100 meters, if you prefer) for 2 to 4 miles or so.

The vibrator trucks (Vibroseis - registered trademark of Conoco) operate in groups of 2 to 6 and generate a (usually) linear sweep of frequencies from about 4 to 40 Hz for as long as 30 seconds. Each truck typically weighs in at 20-25 tons, but in remote areas (e.g., deserts) may run to 35 tons. That's a LOT of energy put into the ground and the return energy sent to a recorder from each seismometer could be as little as several microvolts.

For all the ambient noise of a city street, you'd never see any reflection signal except for the principles of redundancy of sources and receivers and the power of statistical processing on huge computers.

So if there was nothing more than a transmitter unit on the street with a bunch of cable on the ground, it's not seismic exploration. Btw, thanks to Bill for his link to a photo of a Vibroseis truck.

Toby

Date: 2008-07-27 20:50:01 UTC
From: Toby Zidle
Topic: 28660 Message: 28670

IPN reported at 3 p.m. today that Careflight was en route to Aubrey
(Denton County) for a 14-month-old left in a vehicle for two hours. TWO HOURS!

That's infuriating! What are those so-called adults who are supposed
to be responsible thinking about??!! It's 100 degrees outside;
easily 120 in the car.

Put me on the jury for that case. I'd insist on similar conditions
in any sentencing. Two minutes in the microwave!

Toby

Yes, there are spikes in the ground along the black wire. The yellow wire is linked to several other units it appears. I have seen them along Park Row in Arlington, and it seems that both the elementary and middle school's property near my house have them around the perimeter. We've all signed gas leases in this area, so hopefully they be drilling soon.

I concur with the thoughts already expressed. This baby's in heaven now (it did die today) and all is well, but I can't remove the image from my mind of the suffering experienced by this child. I don't know what the solution is. Maybe an all-out media blitz every year when the temperature warms up...keeping the heat (sorry) on these, uh, forgetful parents with tons of public service announcement, billboards, and news spots.

From: Chris Easley
Topic: 28678 Message: 28678

While listening to Johnson Cty Passport on 154.445, I heard Maud VFD
being dispatched to a fire on FM 3098. The strange thing is, Maud VFD
is located in Bowie County!!! That's the same county as Texarkana.

I have no explanation on how I'm picking up fire dispatch for a
county that is some 200 plus miles away. It was coming in pretty clear.
Except for the data burst on the JoCo Passport system that kept
interrupting the transmission.

The PL tone was 162.2 BTW

And no I'm not hungover from last night! :)
I don't even drink.....

Chris

Ok. I'm confused. I assumed the Aledo repeater
was/is the same as the Mineral Wells repeater?

If it is, then Tom ND5Y posted an earlier message
stating the Mineral Wells repeater is now digital
on 155.460.

So what frequency (or frequencies) are they using
out there?

The Aledo Repeater is on 159.210. It is east of Weatherford. It is dispatched by Mineral Wells. The main Mineral Wells station on 155.460 is in extreme southeast Jack County north of Whitt. They normally simulcast on both. So far today I haven't heard any mobiles on 155.460 so I don't know if they are running it in repeater mode any more like they had been recently before they switched to digital.

RR.com has it listed as Fire Dispatch/Paging, However it has alot of PD traffic, some of which has Celina PD Traffic, Talking to Denton County Dispatch (Though Celina is in Collin County) . . .

My question is, What has 155.835 been changed to, and why is Celina talking to Den/Co Dispatch?

Thanks

I think the 4xx units are actually Hunt County units. not to be confused with 64xx which is Celina FD, though they drop the 6 when they talk on the radio. Additionally if you listen the dispatcher toning out FD calls is totally different that the one dispatching in Hunt County. While the actual dispatcher is different. what I mean by totally different is the console sounds different.. The Hunt county console has a much tinnier sound to it...

28689. Re: Denton County 155.835 ?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-01 13:47:29 UTC
From: Brent Willcox
Topic: 28684 Message: 28689

Denton County only uses 155.835 with a 118.8 tone to activate the Minitor pagers for the the smaller fire departments in the county. My understanding is that this will eventually be phased out as the dispatches are being simulcasted on the respective department operations talkgroup and have been for some time now.

You occasionally will also hear a DPS trooper that does not have an 800 radio use it to talk to Denton County, but this is exceptionally rare now.

Ellis County SO also uses 155.835 with a 162.2 tone as their main dispatch frequency.

So, check your CTCSS tones:
114.4: Hunt County
118.8: Denton County
162.2: Ellis County

As for the fire departments don't expect the tone outs to be phased out anytime in the near future and probably longer. Most of these departments are small volunteer departments or small combination paid/volunteer departments. They have very limited budgets and as long as they can't afford to give all of their firefighters radios to take home they will still need the VHF frequency to activate their Minitor pagers which are significantly cheaper than the radios for the 800 system. I can't see most of these places having enough money to give everyone on the department a radio (including new members coming in over time) and then be able to replace them when someone breaks one. I think you'll see it stay the way it is for a long time. I am glad however that they are doing the simulcast because that's one less frequency to keep up with and it also helps when someone doesn't have a pager but they have a radio with them.

Also, an XTS (or any portable radio) is a very poor substitute for a purpose-built Minitor pager.

28692. A little off topic - Carrollton?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-01 14:06:30 UTC
From: Niki
Topic: 28692 Message: 28692

During the last week in Carrollton, there have been two nights where there are firetrucks and squad cars blocking off several blocks of streets. Seems like a lot of activity in relatively quiet neighborhoods. The first incident was near Trinity Mills and McCoy area. Then, just two nights ago (I think) it was near Frankford/Josey area. Thanks in advance for any help! :)

Hate to say it, but block parties?

Personally, I think these things are ridiculous, but I
believe in Flower Mound you can request PD/FD
help to block off areas. Big waste of taxpayer money
if you ask me. If you can't control your own party,
then you don't need to be having one, plain
and simple!

I'll throw in my two....

I agree with Brandon, in that, I'm sure there are oodles of
FF/EMT's out there (not just in Denco) that would love to
upgrade to a new fancy dancy digital capable radio, but
the fact of the matter is, even with the changeover mandate,
it just ain't gonna be happenin' with MANY departments.
Numerous ones just flat out don't have the budget for 3-5K
a piece radios. Denco is planning on a future move to P25,
countywide. However, getting everyone on the same page
(communications - and financial wise -) will be a total different
animal entirely. Many volunteer departments are barely able
to do oil and tire changes on their apparatus.

Also, remember too (and I brought this up in a past post), that
DPS can get on the 155.835 repeater to coordinate activities
and mutual aid with the county. I assume county doesn't have
the DPS 800 talkgroup(s) in their dispatch console, or the new
DPS digital channels. So I don't see 155.835 going away anytime
soon.

Even though this is OT, I had to comment, hope it wont go too far (sorry Don).

It has nothing to do with people not being able to control their party, its when the entire block is involved in some type of party, or get together, usually for the kids. And citizens are not allow to block the streets so some type of city services has too.

When I was a kid we had block parties for Halloween (City of Fort Worth) and the citizens on that block had to get a permit to have a block party and to block the street. Now back then PD nor FD were not there like mention in this post, there may have been one officer, and the city just came out and put up barricades. So, I'm all for block parties if its for the kids. And as for wasting taxpayers money, as long the public safety services that are being used are not being taken away from providing emergency services (off duty) and the citizens are paying to have those services out there (privately), then I see no problem in it.

Here <http://www.nbc5i.com/news/17066247/detail.html> is the link to the news story from NBC 5. I do not agree with what could happen to this covicted killer, but such is our justice system. I am relieved by the fact that he must now live the rest of his life hearing the words of Karen echo in his mind, the fact that he has to come to terms with the fact that he took the father of two beautiful girls. For once, I can be sure and happy to say, this guy will suffer for the rest of his life for making the choice to drive with a BAC of at least 3x the legal limit. I am sorry for the rant, but I have to vent somewhere. I hope this is not looked down upon.

Hi Mike & Group,

I wouldn't be surprised if it might be a heat related technical issue. I don't necessarily know what the issue might be. I'm missing about 75% of my IPN pages and I believe it's probably due to the heat affecting the transmitter(s) in my area. This seems to happen every hot summer. Messages start getting lost (not received other than by e-mail) and the ones I do get are almost always error filled or incomplete. The heat can play havoc on equipment.

It's just a possibility anyhow...

Both Alvarado and Keene are back to dispatching on their old freqs.
153.890 PL 173.8 & 158.940 PL 71.9 respectively.

That leaves Cleburne Fire as the only user on the Passport system
as of right now.

As far as Fort Worth, looks like quite a few officers are missing and the ones that get the bad marks are the NPO's, who have to deal with and take the heat for problems in their beat areas (as well as deal with habitual whiners). The same folks seem to be dishing out the bad marks and comments -- probably some punk kids who act the fool and keep getting pulled over.

28718. Re: [dfwscan] Re: MWL DPS - Aledo repeater now on P25.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-04 15:47:09 UTC
From: Russ
Topic: 28681 Message: 28718

We're using both...
155.460 is Main A1
155.210 is Aledo 17A

we do link both when only one operator is on duty,
but, when we have two opeators on duty we each have a station.

Main services Jack and Palo Pinto counties along with the western half of
Parker (the imaginary dividing line is usually Hwy 51) and northern Erath
(mainly the I-20 section of Erath county).

Aledo services the eastern half of Parker, all of Tarrant and northern half
of Johnson county.

However, the digital signal reaches further, and those of you now in Tarrant
county can now receive the 155.460 (the tower is located in Whitt, north
western far reaches of Parker County).

Repeter mode has been turned off for 155.460 unless there is a need for it.

I know it doesn't make sense, but that's the orders from above.

It's available if needed; i.e.: Persuit's, etc.

The Aledo Repeater is on 159.210. It is east of Weatherford. It is dispatched by Mineral Wells. The main Mineral Wells station on 155.460 is in extreme southeast Jack County north of Whitt. They normally simulcast on both. So far today I haven't heard any mobiles on 155.460 so I don't know if they are running it in repeater mode any more like they had been recently before they switched to digital.

Date: 2008-08-04 23:39:35 UTC
From: David McAnally
Topic: 28724 Message: 28724

Some of you may recall from 2005 where the founder of "Police Call" closed down the publication. Today, I read Gene Costin, a.k.a. Gene Hughes, has died at age 80. I bought and used several copies of Police Call over the years, before and after we had personal computers. I may even still have a copy or two in a box somewhere.

See a story at <
http://blog.wired.com/27bstroke6/2008/08/police-call-pub.html>

"The southern California man who published the radio scanning bible Police Call has passed away. Under the pen name Gene Hughes, Gene Costin became a household word among geeks in the 1970s when he started cataloging the radio frequencies used by various police and fire departments and other agencies, giving hobbyists something to do with the first generation of programmable scanners then hitting the market."

28726. A Small, Interesting DPS Talk Story

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-05 03:57:40 UTC
From: commscan
Topic: 28726 Message: 28726

Hi Group,

I mentioned a few days ago that a neighbor of mine was dating a Mineral Wells DPS dispatcher. Well, I got to talk to her a little while ago. She said the Mineral Wells station had a tower in Whitt, TX too. I haven't looked this up and do not remember where Whitt may be.

She said that the digital setup is still being done and technicians are out their each day. I was thinking that there would be different NAC/NID tones for each station (as in the analog days and the PL tones). But apparently that's not the case just yet. She said she's been enjoying hearing Austin, Waco, and many other stations on the new digital system now. I need to live under their tower :-).

She spoke of the troubles they're still having receiving units clearly on their new P25 system now. And unlike in the past, where units from most anywhere in North Texas (and farther out) could switch to the Mineral Wells channel and use her to talk to, she's only having good communications with the Erath County units on a normal basis at this time.

Like a moron, I ended my talk with her by saying "WXR376". I think she got a kick out of it anyway. Her boyfriend looked at me like we were speaking some unknown language or code. She seemed like a really cool and cheerful lady.

28728. Courtesy Patrol Tarrant County (Tarrant County Sheriff)

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-06 02:53:56 UTC
From: KC5RHB
Topic: 28728 Message: 28728

The only reason I found this out is because I was listening to the I20 - I35 "bridge" incident radio traffic and had certain talk groups on scan. I normally don't monitor the Courtesy Patrol unless there is a major freeway incident or during ice/snow events.

As most of you know, TXDOT Courtesy Patrol was taken over by the Tarrant County Sheriffs Dept some time back, as for a lot of Texas counties.

And for a while, Courtesy Patrol worked off the TXDOT frequency of 151.0025 (167.9)

Well today, sounds like the Courtesy Patrol is now on the TCSO radio, Ch 21 SOPS 3 (8592), which I believe, is one of the Special Ops channels, or used to be (haven't updated my TCSO files in a while).

At first I thought they might have been on there due to the I20 - I35 "bridge" incident. But after the incident was over, I continued to monitor and it sounded like normal Courtesy Patrol traffic. And I was also monitoring the VHF frequency and never heard any traffic.

So, it looks like that the Tarrant County Courtesy Patrol has switch over to the TCSO (FW PS) radio system, "SOPS 3" (8592).

For those who don't already know: I'm a PCO for Mineral Wells.

And first of all if you're in the know you know that we're not "dispatchers;" we are Police Communications OPERATORS; for we do not dispatch the troopers to anything except for crashes. We do not handle normal policing calls such as city/town police departments or sheriff's deputies.

And, the digital setup was completed last Thursday, the technicians are gone and we're on the setup that we'll be on.

As far as hearing Abilene, Waco and Wichita Falls, our main radio is set to receive these stations on a 'scan' feature of our main radio; it is not skip, but a planned feature.

In the old days of analogue, our station had a hard time hearing our units on I20 at the 370 mile marker (Palo Pinto/Erath county line), now our RSPC (Regional Supervisor Police Communications) made a test with us on his way home to Lubbock last Thursday, and we could reliability hear him all the way to Ranger--I'd say that is quite an improvement.

As far as any unit switching--any unit in the state can still communicate with us, but they have to find the proper map to us in their radio setup (each Captain for each division (highway patrol, commercial vehicle enforcement, narcotics, rangers, criminal law enforcement, etc.) each have a different setup for their guys out there). As soon as they find the proper "map," then everything's 10-2.

As far as NAC/NID tones, yep they are still used, that's why we're 17A in the digital setup on repeaters.

Thanks,
Russ

Hi Group,

I mentioned a few days ago that a neighbor of mine was dating a Mineral Wells DPS dispatcher. Well, I got to talk to her a little while ago. She said the Mineral Wells station had a tower in Whitt, TX too. I haven't looked this up and do not remember where Whitt may be.

She said that the digital setup is still being done and technicians are out their each day. I was thinking that there would be different NAC/NID tones

for each station (as in the analog days and the PL tones). But apparently that's not the case just yet. She said she's been enjoying hearing Austin, Waco, and many other stations on the new digital system now. I need to live under their tower :-).

She spoke of the troubles they're still having receiving units clearly on their new P25 system now. And unlike in the past, where units from most anywhere in North Texas (and farther out) could switch to the Mineral Wells channel and use her to talk to, she's only having good communications with the Erath County units on a normal basis at this time.

Like a moron, I ended my talk with her by saying "WXR376". I think she got a kick out of it anyway. Her boyfriend looked at me like we were speaking some unknown language or code. She seemed like a really cool and cheerful lady.

Good informative report. I remember from the old days using 42.9 and 37.180mhz. Is there any of this old equipment still in use?

I also remember when the first scanners came out. They were a great economical boon for stations to communicate with each other without having dedicated radio systems.

But I reckon I shouldn't go on any further cause the list police will be back on me again.

The traffic media folks better update their scanners
or they'll be missing out, as they, ahem, often do.

They need to hire me back to program their
scanners (hint, hint).... BG :)

Well i had a cable lined up to use for a weekend about a month ago but that individual fell thru and re-programming hasnt been a priority. Now that i have a work project done and can make the time to re-porgam them i am in need of the cable again.

I really hate to buy a cable that i will only use once and forget where i put it. LOL Now that i am living in a different part of the Metroplex i want to completely re-program both my scanners.

So if anybody in the Dallas / Garland area has a cable they would be willing to let me use for a weekend or week i would be much appreciated. I dont mind meeting somewhere after work on a weekday anytime on the weekend. I am pretty flexible.

Thanks in advance.

In case anyone is curious:

We were initially dispatched to an "oil tank fire". We were assuming a 55-gallon drum. maybe one of those 500-gallon waste oil recycling canisters. something along those lines. I was on the first-in pumper/tanker, and it was definitely no 55-gallon drum. The tank (21,000gal. of liquid asphalt) was on fire internally, and venting out an access port on the top. It was positioned near two other asphalt tanks (also 21000gal, also full), a 4,000gal tank of diesel, and a 1,000gal tank of diesel. Primary concerns were the immediate fire, a potential BLEVE, and extension to the neighboring tanks. We mounted an initial attack using CO2 and dry chem (product is reactive with water), which was partially successful. Unfortunately, due to poor water supply and lack of available equipment due to a large grass fire initially, we were unable to keep the tank cool enough to prevent reignition. Dallas HazMat was special called for mutual aid a few hours into the incident. Dallas applied a large quantity of foam from their engine (some special high-dollar stuff - that's why they get federal dollars and are available for regional response) and we capped the tank, then cooled the tank with two monitor nozzles. The facility is located in the county, approximately two miles from a hydrant. We established two 2500gal. drop tanks and ran water shuttles with at least 5 tankers for several hours to maintain a constant water supply upwards of 500gpm.

The company produces liquid asphalt which is used for various construction projects.

Initial call was about 1130, crews cleared about 2030, and we got our apparatus reloaded and back in service about 2230. Total estimated water used was 250,000gal. When we cleared, the equipment was indicating a temp well below the flash point of the product - where we hope it will stay for a very long time!

Equipment responding was (I need sleep - my apologies if I miss anyone):

Terrell Volunteer tanker 1, engine 1, brush 1, brush 2, rescue 1

Terrell City engine 1, engine 2, reserve engine 1, brush 2, truck 2, chief 600

ESU rehab 1, command 1 + additional manpower

Dallas HazMat 3, engine 3, rescue 3, chief 8, chief 810

Kaufman tanker 1, command 1

Elmo engine 1, engine 2, squad 1

Ables Springs engine 1

Mabank brush 4

Combine engine 1, tanker 1

Crandall tanker 1

Forney tanker 5

Kaufman Co. fire marshal 351, 352, 353

Kaufman Co. Precinct 3 tanker

Kaufman Co. Precinct 4 tanker

We also had a grass/hay/structure fire about 15 minutes after this fire was toned, which burned 40 acres, 50+ round bales of hay, and two sheds (with a single bovine fatality). This caused our initial problem with water supply, as resources had to be diverted to protect threatened structures.

At the peak, some 60-70 firefighters were on scene. We began sending crews home a few hours into the fire, as the ambient temperature and the heat from the fire began taking their toll. I'd guess about 100 people were at the fire at one point or another during the day. ESU went through more than 30 cases each of Gatorade and water, along with many cases of snacks and many sandwiches, trying to keep the firefighters in the best condition possible. ESU also staged our mobile command post for incident command, as well as a very well air-conditioned place for firefighters to go cool off and stretch out a bit. Thanks to their efforts, and the efforts of incident command to rotate crews, we suffered no firefighter injuries - as far as I'm aware, no one even needed to go in the box. No civilian injuries to report.

And, with that, it's well past my bedtime.

Terry

A greyhound bus travelling from Houston to MO has rolled over on SH-75 in the area of 1417. There were 55 people on board, so far Ive heard 5 or 6 helos check inbound to Parkland. There are multiple fatalities and multiple critical injuries, no count has been estimated yet. The bus number is as yet unknown. The Sherman PD has released a statement a bout a half hour ago that a blown tire maybe the cause. Apparently the MVA happened around 1245 Central time.

Agree with blown tire theory. I was on the bridge where the bus crashed through the railing and there's nice gouge marks in the asphalt maxed with rubber. Bad deal. AMR claimed 18 helos, I heard 13 before I bailed out on scene. There's a news conference at 8 am I suspect some of the stations will carry live for those that want to know more.

Thanks to a couple of monitors on the list that
told me there is no 02-200 talkgroup for the
DFW Airport system. My bad. I meant talkgroup
02-000/DEC 256 (PS Alerting - DPS 1).

And yes, you CAN monitor the dispatch/alert
on this talkgroup (in the clear), and it is
not affected by the Pro Voice ESK. This is
the ONLY talkgroup on the system that I have
found this applies to. Unfortunately, once you
hear the alert, the fire/ems units go to TAC 15
(sometimes others) for response, and you can't
monitor those talkgroups to get further details
on the incident. But to monitor SOME is better
than NONE at all is the way I look at it. And you
can bet your bottom dollar that if there is another
major crash (like a Delta 191 or 1141) everybody
and his brother will be responding. You will not
have ANY problem monitoring the action even if
you can't hear Airport DPS. It'll probably be the
biggest cluster &^%! you've ever heard on the radio!

A huge amount of activity on Frisco FD Tac
channells 10 thru 12 today. What the heck is going
on? I never could get a grasp on locations really.
I heard "World Cup" and "East Gate". One tac
channel had a command division sector, and
another channel had just a command. Yet another
tac channel was working Careflite.

I started thinking maybe a Roughriders game?
I have to admit I know little of this team. However,
do their games really warrant that much public
safety involvement?. Seems insane for a
minor league team. Guess it must be that stadium
that draws them in. Looks much nicer (at least from
the air) than the Ballpark.

Early this morning (9 A.M. or so), a Carrollton patrol unit was advised by a DPS unit that a group of 400-500 motorcyclists would be coming through Carrollton en route to Frisco, presumably eastbound LBJ to northbound I-35. Carrollton PD had not been previously advised nor did they know why the group was headed to Frisco. The patrol unit was instructed to stay in the area to "observe". Over the next 30 minutes, there were no further reports and I eventually turned off my scanner.

I suppose this will fit in with what you're reporting, Blaine.

I have to say I hadn't checked out Ben Saladino's
web site in quite a while, but this afternoon I
did, and noticed the updated pic of the shack.
Very nice Ben. Looks great! Love the 780/5's
up there on the mounts.

The new Founders Plaza should be opening soon (Based on visual observation, only.) If I had to guess, I would say another 2-3 weeks.

It's on the north end of the airport, as you enter from Business 114 (or whatever they are calling it this month.) Looks as if will be even nicer than old center.

28755. 159.190Mhz ?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-11 08:21:22 UTC
From: Code 3 Productions
Topic: 28755 Message: 28755

I just went diggin' through my storage unit and among other things, i pulled out an OLD GE / Erricson MPI Series Portable radio (2 Channel), I found the charger, and hooked up a BNC Antenna to it and keyed it up to my BCT15 on Close call and it registered as transmitting on 159.190mhz. i know the radio came from florida somewhere, it was given to me with a whole lot of other radio equipment several years ago, this is the first time i've pulled it out. Does anyone know if there are any agencies or anyone for that matter in this area that uses this frequency?

I have no idea what im going to do with this thing but im sure i'll keep it around the shack for keepsakes lol.

I did a search on that freq and found nothing here localy, even looked through old paperwork of frequencies dating back to the late 80's early 90's and found nothing. Did a nationwide FCC search and only came up with 3 hits, which I thought was weird:

KNIX211 (State of New Jersey, Forest Fire Service) (ACTIVE)
KNIX212 (State of New Jersey, Forest Fire Service) (ACTIVE)
WNSB401 (Big Bend Electric Cooperative Inc, Washington) (ACTIVE)

Hope this helps.

From: Tom ND5Y
Topic: 28755 Message: 28757

159.19 isn't a valid channel. The closest ones would be 159.1875 and 159.195.

Close Call only gets the *approximate* frequency, not the exact frequency. I know my BCD396T is like that. It can be up to 10 kHz off.

It is also possible that the radio is screwed up and transmitting off frequency.

Tom ND5Y

28758. CareFlite Johnson County

Tonight, Careflite will be switching their radios over to a new system in Johnson County due to recent "equipment issues" that have prevented the dispatch side from transmitting at all. I will pass along more information as I have it.

28759. Re: CareFlite Johnson County

Thanks for the update. I thought something was up when I heard them working off CERN tower. Didn't know it was affecting the dispatcher's though. And yes, definitely pass along any info you get.

On a side note, I have noticed that Johnson County has turned off or appears to have turned off, the Passport system all together. I'm basing that on two things.

1. I'm hearing NO data blips on 155.145
2. I'm getting a PL tone of 67.0 with each transmission

28760. Two questions for the list

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-12 03:05:18 UTC
From: Richard Whitenight
Topic: 28760 Message: 28760

I do most of my scanning for railroad radio traffic while in Arlington, Fort Worth and Saginaw, Texas. I've noticed in Arlington and Saginaw, bleedover from an unknown frequency. Both times I've been fairly close to each cities fire/police dept stations. Could this bleedover be coming from a powerful and/or close transmitter?

My second question comes from what might be some really great atmospherics. Normally when I'm listening to my scanner in downtown Arlington, I can hear the dispatchers with no problem, but engineers communicating with dispatchers, I'm lucky to hear them if they're no more than 5 miles away. But, over the last two weeks, I've been able to hear the engineers when they're at Tower 55, more than 12 miles away. What's the cause of this increased reception using only my Radio Shack Pro 97 scanner?

TIA.

Yeah...when I came to work Sunday, we were totally unable to transmit from our side but could hear the ambulances talking clearly; making us have to result to cell phone dispatching. At first, we had the ambulances switch to the same channel as Dallas Ground but they couldn't really hit the tower so we switched to turn and had to take turns between ambulances and aircraft. I talked to our radio guy this morning and he told me that the system we are using now is a single site LTR system in Johnson County that we used before. Not really sure on specific freq yet but I will look into it and get it out ASAP.

I won't go off too much on a political rant except to
say it's just more "terrorist paranoia" crap, and
yet another excuse to shut off citizens from seeing
the workings of our government and officials who
we elect and put into office, and a military "we the
people" fund.

Agree.
It was also really good PR for the military and also for the city of White Settlement to have that.

It's too bad.

This is a real bummer, but at least the article says you can still park somewhere else and walk over. I'll never forget watching from there with another list member whose initials are also BS, when we heard my license plate being run by the MPs on the interior of the fence. I think we were antenna profiled.

On the bright side, I rode by the new Founders Plaza on the North end of DFW last Sunday, and it's going to be pretty nice.

Happy Scanning and thanks for posting the article Bob.

Ben

>The White Settlement PD chief and the public works director

I wonder what they will say when somebody gets smacked by a car while walking over to the fence. Which is more liable to get you killed, sitting in a parked car off the roadway, or walking across a busy street? Hmm..

This is almost as grand of an idea as WFAA turning off the wonderful DFW airport camera on channel 8-3 and replacing it with yet another radar screen. Just like the one they have on 8-2. I like being able to view the radar, but c'mon? 4-2, 5-2, 8-2, seeing it in the corner of my screen with associated scrolling text, and now 8-3? I can see it on the internet at the NWS and each stations web site, my mobile phone, my GRLevel2/3 software, the Weather Channel, and hear blaring alert tones on my weather radio and on the neighborhood emergency alert sirens. Can you say weather overload? Don't get me wrong, I'm a weather nut and ham radio perator and love to go spotting, but the DFW area is becoming "nexrad saturated".

I remember years ago my brother and I would gather up our scanners, head out to DFW and walk to the gates (on the inside of security mind you), ride the trains all over the place with scanners and cameras in hand, and spend all day just watching the planes. We had a blast, but those days are long gone, and now the opportunity to even watch them on tv is gone too. What a shame.

Every day just convinces me further that we are surrounded by numb-skulls.

Yes, I do miss the good 'ole days, when the hobby had much
more freedoms and you could have FUN. Now airports and
airshows restrict you. You can't go to a rail yard and just watch
and listen. I remember at the Democratic Convention in Atlanta
in '88 me and a friend just walking around with our scanners in
full view right outside the entrance to the convention hall and no
one taking notice at all. Covering news, and going to see AF1 & 2
land and depart at the airport with the scanner and Secret Service
frequencies going full blast. Now you'd be lucky if you could get three
miles away.

> Every day just convinces me further that we are surrounded by numb-
> skulls.

Amen, Tracey. Very well stated.

I think the White Settlement police chief should have to send a letter to every citizen of the
town, telling them exactly how much money he spent on this abortion, why he did it, and listing the evidence he had that it was necessary, and that it would achieve any benefit for
the citizens. I also think a goodly number of those citizens would conclude that he was an idiot and should be fired.

Firefighters question county ambulance pact
By JOANN LIVINGSTON
Daily Light Managing Editor
Published: Friday, August 15, 2008 1:52 PM CDT
Firefighters from across Ellis County showed up en masse Thursday night to question county officials face-to-face over a recent decision relating to ambulance service in rural areas.

The more than 100 firefighters on hand for the Ellis County Firefighters Association meeting represented rural and city departments, volunteer and paid, with officials from the different emergency service districts also in attendance. The emotional meeting saw questions raised as to whether or not the county is placing a price tag on human life.

County commissioners recently voted 4-1 (Bill Dodson dissenting) to authorize County Judge Chad Adams to sign a $1 a year, five-year contract with CareFlite.

*
Under the agreement - which is pending review by county attorneys - CareFlite would stage an ambulance in Italy and Palmer, with company officials saying they would launch an air ambulance if necessary to meet service time requirements, which carry a financial penalty of from $5-$10 a minute if not met.

The commissioners court currently has its contract with East Texas EMS, which also has EMS contracts with the cities of Waxahachie, Ennis and Red Oak, for a total of 5 1/2 ambulances staged in Ellis County. Midlothian has its own ambulance service.

Current mutual aid agreements between the different entities (ESDs, fire departments, cities, county and East Texas) have the East Texas ambulances flowing where needed.

Questions were raised during the firefighters' meeting as to whether or not similar mutual aid agreements - which are typically based upon an ability to reciprocate services - could be secured by the start date of the proposed contract (Oct. 1). Those agreements would ensure backup service for rural areas if CareFlite is unable to handle the call load, a reported 1,800 to 2,000 calls per year.

CareFlite representative Mark Kestler said the company plans to back up its Italy-based ambulance out of Johnson County, with the Palmer-based unit

backed up out of Duncanville/Lancaster. CareFlite also has ambulances in Mansfield and, if its ambulances aren't able to meet the time requirements, a helicopter could be launched, he said, noting variables though, such as the priority level of the call and whether or not first responders were available on the ground to assist.

Beyond that, mutual aid agreements with other entities would provide for backup; however, discussion during the meeting indicated no agreements relating to the proposed contract with CareFlite have been worked out - with an indication those could be unlikely. Also appearing unlikely at this time is any reciprocity between the different EMS providers on membership plans.

"What's Plan B?" Mark Jackson of Milford Volunteer Fire Department asked, with no definitive answer received.

"We're getting decent service (now). It's not great, but we're going from 5 1/2 ambulances to two and anybody that knows a little math can figure out it's not going to get better," Telico Volunteer Fire Department Lt. Charles Walker said. "Two is all you've said you can afford. . How are we going to do it all with two ambulances?"

Providing input

Walker questioned why the commissioners hadn't sought input from the association's member entities, describing firefighters' requests to be involved as bluntly rejected and subsequent requests to speak during a commissioners court meeting as unanswered.

Walker said he'd been told the association's input didn't matter and asked Dodson and Sims why none of the commissioners court had ever attended an association meeting although invited to do so.

"We're not a bunch of yahoos riding around in big red trucks," he said, noting his passion for serving his community. "We do this because we love it and because we want to do it."

He said the association wanted to help with the issue and that it wasn't a matter of being for or against either East Texas or CareFlite.

"This affects us and our families and our communities," he said, citing a list of questions about what the commissioners have proposed, one of which was whether the $120,000 savings to the county would still be allocated toward emergency needs, such as improvements to the radio system or training.

As noted by Waxahachie Fire Chief David Hudgins during the meeting, East Texas recently negotiated new contracts with the cities to put two ambulances in each and had offered to stage two ambulances (one each in Palmer and Italy) for the county with no increase in the subsidy it was paid, which has been about $120,000 per year.

"That gives us eight to move around as we see fit or as the needs arise," Hudgins said. "Not that many counties can say they have eight ambulances and

a helicopter (at Ennis Regional Medical Center) based there."

Other questions included whether the cities would find themselves subsidizing CareFlite - and shortchanging their residents - if mutual aid agreements were entered into. Also questioned was how CareFlite intends to fund its service without a county subsidy, with Kestler saying two ways were through better collection of accounts and higher fees.

Sims said the county began looking at its emergency medical service about a year ago, with workshops held with different providers.

"CareFlite said, 'We'll do anything and everything we can to give people what they deserve.' We didn't hear that from anybody else," Sims said, saying he'd had complaints of ambulance calls taking as long as two hours to arrive in the Milford area. "My goal was to make sure everybody had a good service."

Panel needed

To avoid issues in the future, Sims said an ambulance service board with representation from across the county needed to be established and that the cities and county should work their contracts to start and end at the same time.

ESD board member Jack Dineen expressed his appreciation to everyone for attending.

"I can't tell you how proud I am of you," he said. "If not for your dedication, you wouldn't be here."

In particular, Dineen thanked Hudgins for his input and the information he provided - and requested Dodson and Sims to have the commissioners court look again at the matter.

"Can we go back to the drawing board and redo this? Nothing's been signed . and if it's not signed by the judge, there's no contract. You've got so much brainpower in this room (to utilize)," he said, asking whether the current contract with East Texas could be extended six months to allow more time to address the issues.

"Is it done? No, it's not done," Sims said, saying he'd heard information during the meeting that had raised some questions for him. "I want to work this out, correct any deficiencies and do it as quickly as possible."

In a unanimous vote, the firefighters called on commissioners to look at the matter with more detail and resolve the issues before proceeding.

The contract with CareFlite would not go into effect until OK'd by the county attorneys and signed by Adams.

Sims and Dodson did say one or the other would place the issue on the next commissioners court meeting, Aug. 25, with the different fire departments and ESDs invited to send representatives to speak.

Hello, list. I compile a list of weekly FCC license grants:
http://home.comcast.net/~gmitch86/quick.htm
for western states. I have been doing this for CA for around 4 years
and I have added other states in the last couple years. Things are
going smooth so I want to add another line of states from ND to TX. If
it is OK with the list and mods I would post a message weekly when the
updates are ready. Thank you for your time.

Well its over. It sounded like a real incident, perimeter units, witnesses, and business owner. It was at some warehouse. I've heard them train before and it didn't sound like that, but this incident also sounded "scripted" and was too quick, so, no telling with Burleson PD, they do it their way and no one else's. Just don't fall asleep in your car, or they will take you jail.

Later.

When I was at Medstar we would post there. Every now and then we would get buzzed by an occasional FA-18. You could see the pilot wave. Almost like 'Thanks for sitting there.'

As far as Ellis County, if they are using the ETMC radio system, how well do they like it? Or is Waxahatchie the only user? Terry or TerryJr.: didn't Scareflite give a similar proposal to Kaufman County? Seems they were going to put a truck in our station in Elmo.......Would have loved to see them negotiating a lease with Eric.

Waxahachie is the only user. Ellis Co. SO and the VFDs are still on their VHF channels.

Careflite did make a proposal to Kaufman Co., as did Champion. But, they wanted subsidy to keep the number of ambulances we have now - otherwise, they wanted to do us just like Ellis Co. and go to 2 or 3 boxes county-wide. Negotiate, with Eric? Ha!

I agree with Brian. Some of it is the same information from the NETARE website (which I manage for the Northeast Texas area). I live in Jacksonville and work in Tyler, so some information is from first-hand knowledge and some from posts on Radioreference. I know on my website I have selected some information from Radioreference but the disclaimer exists on what was copied as "information courtesy of Radioreference". Any additional information I have that does not say "courtesy of Radioreference" IS original and has been logged by me. As I encounter new information, it will be posted in the forums and sections on my website and submitted to Radioreference for updates and changes. You can view this information at http://k5bdl.com/netare/

Any suggestions or input is welcome. The NETARE Yahoo group has existed since May 2003 and has about 50 members. I invite all of you to join if you wish.

Since I know some on the list enjoy train watching/monitoring I thought I'd pass this along. This morning about 5 am there was a really neat something in the south end of the CJ yard in Dallas. It was painted much like a UP engine is painted but had a slogan about using technology to enhance safety. This thing appeared to be able to move under its own power (big windshield with wipers etc). Hard to describe and too dark to photograph. I'll have to ask one of my special agent buddies what it is unless someone here has figured it out! Curious what it uses as a callsign as well.

For those that don't know, the White Settlement Police Chief (Jack Ely) is the most recently retired (2007) Chief of the base (DOD) police department. This is probably something that he tried to get done while he was with DOD and couldn't get the city to cooperate, but now he's in a position to take care of a non-existent "security" problem. I've lived in the area for 50+ years, used that very spot to watch B-36's, B-58's, etc., and have NEVER heard of any accidents involving cars coming out of there (although I'm sure there have been some). It's most likely just another case of a retired federal double dipper flexing his "muscle".

28793. Piece on Fox 4 about new police radios

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-20 03:12:41 UTC
From: Jason Simpkins
Topic: 28793 Message: 28793

There was a piece on Fox tonight about Desoto PD using new frequencies and how it is affecting Plano's watering. They are now on the same frequency so Plano is now having to water manually. They are upset they were not notified and I think they said they filed a complaint with the FCC.

I will try to find the link or maybe Terry knows more.

Jason

Here's the DMN link that includes a lot of stupid comments from citizens!

http://www.dallasnews.com/sharedcontent/dws/dn/latestnews/stories/0819dnmetplanosprinklers2.1273abd2.html

Fact is Plano didn't upgrade their license and hold a mobile only on the frequency. They screwed up and now they're all wet, or not!

Terry

The same one as Plano uses for watering! :)

I don't think they've switched but the new ones are listed here:

http://www.radioreference.com/apps/db/?sid=5155

28799. OT: digital TV in the Metroplex

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-20 16:34:16 UTC
From: Gene
Topic: 28799 Message: 28799

Does anyone know of a discussion group that's dealing with the transition to digital TV?

I have an analog TV that's not connected to satellite, and it gets most of the digital channels .. except anything from channel 8. I've used antennapoint.com to compare the ideal result with what I'm actually getting.

I suspect part of my problem has to do with the dipole antenna I'm using, but am sure I'm not the first to brave this path, and wondered where the Dallas-specific discussions are happening.

28800. Re: Piece on Fox 4 about new police radios

From: Russell Adams
Topic: 28793 Message: 28800

I do believe the data channels are active, now, on two of the three
sites.

28801. Re: [dfwscan] OT: digital TV in the Metroplex

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-20 18:24:47 UTC
From: daweasel@swbell.net
Topic: 28799 Message: 28801

I'm over in southwest Fort Worth and I get all the HD stuff on my TV and tuner card in the PC using the same antenna I have had up for years for the analog TV. One of the HD sites lets you put in your zip code and it will tell you how much antenna you need for each station. Not sure how accurate it is as it shows different antennas for many of the stations in DFW - it implies some transmitters are lower power or farther away than others (at least in my area).

There are several sites that sell HD-specific antennas that are supposed to work well. They appear to be a UHF flat-panel array

From: Melissa
Topic: 28799 Message: 28802

I don't know if there's a discussion list or not, but if anyone has any questions and wants to email me offlist, you're welcome to.

Channel 8 isn't farther away, but it IS the only station that's VHF instead of UHF on it's digital transmitter. That's probably why you're not getting it as well. If I had a nickle for every person who said the same thing, I could retire! :)

There's no such thing as an HD specific antenna. DONT FALL FOR THAT! Also, there's a big difference between "HD TV" and "Digital TV" Digital TV is what you need the "converter box" for if you receive your tv stations over the air with an antenna, and do not have a DTV capable (ATSC) tuner. HDTV is the so called "widescreen" 16:9 format - and is on MOST digital TV stations, but not all. Channel 52, for example is DIGITAL but not HD. So you'll see letterboxes on the sides of your widescreen set unless the aspect ratio is all jacked up.

Again feel free to email me offlist with any questions - I'll do my best to help!

you might also check out the 'local hdtv info' forum on avs forums. i've found the folks over there to be very knowledgeable and i've seen many local tv station engineers post there back when i was shopping for my first hdtv.
try:
http://www.avsforum.com/avs-vb/forumdisplay.php?f=45

or just go to avsforum.com and do a find for hdtv or local hdtv.

If America saw the day to day life of a real truck driver, they would probably vote to build rail spurs in every town.

I've been driving truck for 12 years, 10 of that OTR. It's not a pleasant life from any angle. A very necessary evil, that's for sure.

I did truck driving for US Xpress and hung it up after my year was up. Hated it. To many trucks, not enough parking, to much traffic, long hours, never home. Anyway this is way off topic. I could go on and on.

We watched it blow up in Fort Worth. We were in the hospital district
and all we got was wind and clouds -- no rain. Wife was in Burleson,
and she said it poured down south and in southwest Fort Worth. Pretty
bizarre stuff, for sure.

Here is the latest in the contract proceedings found this on channel 8

http://www.wfaa.com/sharedcontent/dws/news/localnews/tv/stories/wfaa080820_wz_ellisambulances.17e45193.html

and this on the county fire website

****** *Update as of August 18, 2008* ********

Commissioner Sims had another meeting with East Texas EMS the morning of Monday August 18th. New information has been gathered and a new set of recommendations will be made to the county judge.

The recommendations are as follows:

-*The current proposed contract with Careflight to be tabled.*

- Consider an upgrade contract with East Texas Medical adding 2 MICU s (one in Palmer the other in Italy).

- These items will be on the agenda for the next County Commissioners court- Monday August 25^th 6 PM Waxahachie second floor court house.

* *

Long term plan

- *Consolidation of ambulance service contracts- All contracts would come due at the same time, and we would have one master contract for the county vs. individual contracts for individual cities and the county. (purchasing power in numbers).*

Establishment of a EMS needs committee- compose of a cross section of people (EMS providers, FRO members, Hospitals, ESD members, etc)

FYI the media has also made the issue known. There is an article on the ambulance service in the Sunday (August 17)edition of the Ennis Daily News, the Friday (August 15)Edition of the Waxahachie Daily Light and the Thursday (August 21) edition of the Dallas Morning News.

Tuesday August 19th Channel 8 News (WFAA)

An article about the Radio situation is in the Thursday August 14^th edition of the Ellis Co Press.

The Ellis Observer Website.

If possible, please get a representative from your dept or ESD to the Commissioner's Court on Monday evening. If you wish to speak, forms are

available on the county website.

I have also been informed that by law all four commissioners can not be present at (non- commission) meeting to answer questions.

Proposed plan- Care Flight

Two ambulances will be stationed in the County:
1 in Palmer and the other in Italy.
A helicopter is stationed in West and is available _*as needed.*_

Cost to Ellis County $1.00 per year.

Care Flight has an ambulance stationed in Alvarado, that ambulance _*may*_ answer calls to the West side of the county. Other units are available in Dallas and Johnson co.

Care Flight will provide free all the required training for volunteer fire department first responders.

Response Time:

Cat 1 life threatening emergency Care Flight will have 20:59 minutes to arrive at the site.

Cat 2 non-life threatening Care Flight will have 29:59 minutes to arrive at the site.

Commissioner Dodson voted against the contract!

All other commissioners and Judge Adams voted for the contract.

The cities of Ennis, Red Oak and Waxahachie are remaining with East Texas EMS. Midlothian will continue to provide service for Midlothian and Ovilla.

The proper name is "CareFlite" not Careflight or any of the other commonly misspelled, misquoted names being bandied about. You would think that the media / reporters would get it right! There is a company by the name of Careflight but they operated in another state!

That's ok, our reporters have started verbalizing the noun anyway - "the victim was careflighted to the hospital"

No, the victim was taken by careflight (or just generic "helicopter") to the hospital. But then what does a lowly engineer know about reporting news anyway???

I also forgot to include the Dallas Morning News Article.

http://www.dallasnews.com/sharedcontent/dws/news/city/ellis/stories/082008dnmetellisamb.38a1f99.html

in it they mentioned that with careflite you would be up a creek during
a MCI but truth is no matter who you are with you will be up a creek

Saw what appeared to be a small but disorganized wall form in the inflow as at moved through SW Arlington. Saw one funnel-like formation dip out, but couldn't make out the rotation...it might just have been a cloud getting sucked into the updraft. Pretty impressive and sharply defined rain shaft dumping out of it, though.

We watched it blow up in Fort Worth. We were in the hospital district
and all we got was wind and clouds -- no rain. Wife was in Burleson,
and she said it poured down south and in southwest Fort Worth. Pretty
bizarre stuff, for sure.

Let's not leave out Scareflite.

What kind of morons would fall for that proposal? Cut number of units for less money? Apparently they haven't listened to ETMC West lately. Between them and Kaufman county there is constant traffic, a lot of it is post moves. How can they cover that much area with two trucks? Apparently they don't understand that if your system is busy your backup may also be busy, and thus unavailable. They have apparently never met Mr. Murphy. Someone in Scareflite marketing must have one heck of a persuasive personality or terrific clevage. Any one with any sense at all can see this is a loosing proposition. But we are dealing with politicians here.....

I was going to say the same thing. I think the fact that the county firefighters' don't even
know the proper name of the organisation they are dealing with is a good indication of just how qualified they are to even comment on the matter.

They need to all just shut the hell up and just leave it up to Dr. Bledsoe! In fact, if they
haven't gotten him involved in this yet, they're idiots.

I think Careflite sent out a memo about using there name as a generic name for air ambulance. At our place the reporters were told to use "Air Ambilance" unless they actually see CareFlite on scene or get official word the patient was taken by careflite. They've even used PHI and Lifestar on their stories.

CareFlite tried the same thing here in Wise Co. a few months back. There was a BIG uproar from folks who support the current system of ambulances. While most of the county is served by vol. FD's the MICU's are staffed positions. Luckily the public was actually heard and the contract was never discussed again. They wanted to get rid of the staff EMT's and go with less with CareFlite ambulances and air support. They decided not only to drop discussions with CareFlits but signed with LifeStar for air support with PHI as backup. CareFlite hardly ever flies our direction unless they are transferring from Whictia Falls.

I don't understand how CareFlite can claim they can do more activity with less equipment and personnel. I'm guessing they rely on their helicopters to take up the slack. From what I've heard the Careflite has lost a lot of contracts they used to hold in the smaller counties. I don't really know whay that is but you don't see them out there as often.

Just my $.02 worth. Now back to lurkin mode.

28834. Johnson County Passport Again

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-26 01:38:12 UTC
From: rob.davis@armynursecorps.com
Topic: 28834 Message: 28834

What's going on now? I just returned from a week out of state and find that there are LTR bursts going constantly on 155.295 (Johnson Co. Fire Rptr) and 158.940 (Keene FD Rptr), so I have to lock them out. Is this thing actually functioning county-wide now? Has everyone actually got radios for the system? I'm more than a little surprised to see this going on 155.295.

For the past week and even now, Ive been listening to Johnson Co SO, Johnson Co Fire, Cleburne PD, Alvarado PD, Alvarado Fire, Keene PD, on their normal frequencies that they have had for years. I guess when we stop hearing them on those frequencies then they have completely switched. You have to remember that DPS uses Johnson County's SO frequency (158.745) a lot. So no telling if their radios have been reprogrammed or changed.

So, for me, Ill continue to listen to the conventional frequencies till I am forced to listen to the LTR system.

I think that moment is here, because the LTR system is bursting on the conventional channels, so you can't ignore it. That's what I'm talking about. I'm talking only about fire
though. I don't listen to cops.

Well, if you look on RadioReference, you'll see that 155.295 is one of
the frequencies that have been allocated to the Passport system.
It's listed as CH 3 on the Alvarado site.

The system has been functioning county wide since apprx. July 5th.
It hasn't functioned very well since that time, but that's another
story. Cleburne, Alvarado and Keene have already had radio's for
this system. But Alavarado and Keene had their radio's re-programmed
around the first of August, due to problems with the Passport system.
That was about the same time that they changed the control channel
from 154.445 to 155.145, because of the interference with Hood Cty.
I still haven't figured out the reason for using 153.890/154.445.

Recently, Cleburne FD has been using 155.145 in conventional mode.
And likewise with Keene and Alvarado on their old freqs.

In regards to the PD's , SO, & DPS using the Passport system;
the original plan was for the fire dept's to go online first,
then a year later the PD's , SO, and DPS would join them.

But at this point, I have absolutely no idea what their doing with
this system. I'm starting to believe that JoCo doesn't know either.

28840. Six Flags Hurricane Harbor

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-26 05:03:50 UTC
From: Matthew
Topic: 27007 Message: 28840

I was down around Six Flags Hurricane Harbor on Sunday and finally managed to figure out a couple of their simplex frequencies. The main channel 1 frequency they use is 452.5000 DCS346 which is a repeater that can be heard all the way up here in West Plano. They also have a bunch of low power simplex frequencies they jump to when they want to get traffic off of channel 1. The ones I have been able to figure out so far are Channel 2 468.5750 DCS174, Channel 3 469.3250 DCS565 & Channel 4 469.9000 DCS114. They also have two other simplex frequencies 466.3750 & 469.6750 but yet to hear any type of traffic on them.

So Johnson County is going to do a partial change over with FD first and PD a year later, hmmm, you would think they would do it all at once. It's not like Johnson County has a HUGE urban area (Cleburne). I'm still puzzled why they would even want to go to LTR. It seemed like everything was working fine before. Just like Burleson going to UHF LTR, they have all these talk groups and pretty much only use one or two. Oh well, what happens, happens. Im sure we will adjust and survive. Just more crap to program and keep track of.

Happy scanning....

The last I heard was that the PD's didn't receive their funding and had no plans to move to the new system. As far as the upgrade it was to aid in interoperability and improve the quality of their volunteer's com system (46.100) which is almost useless. The system constantly goes down and it isn't a repeated system so if you're too far from another unit you might hear the county respond to them but you won't hear their traffic.

28846. Funny radio story

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-27 12:23:50 UTC
From: Sarge
Topic: 28846 Message: 28846

Got bumped out for a Haz-Mat call about 02:38. It didn't amount to much and I was home by about 05:00. It was too late to go back to the sack and the boss was still asleep, so I went to drink coffee and listen to the scanners. They were very slow so I decided to scan across 80 meters short wave. I nearly busted a gut when I heard this story.

It seems there was a good ol boy down in Alabama that built hisself a HIGH power mobile ham rig. Bought himself and old Suburban that still run and putforth with the modifications. Hacksawed a hole in the dash for a huge radio and hung a base station mic from the rear view mirror and set it on vox. Word on the street was that he was running way I legal output power.

Unfortunately for him the old rubber door gaskets had long ago rotted away letting the door rattle back and forth in the latch. Well, with the huge rf he was spewing forth, this resulted in arc welding of the door to the body. It seems he put out a call for help to come git his door open at about 02:30. Course nobody could even stand to be around this guy, so someone told him to just kick it open. His next message was more desperate than the last one. It seems he had broken his ankle while kicking the door. Supposedly several crowbars and a come along were needed for extrication by the local VFD.

All that lauffin I was doin caused me grief, It woke up my wife.

Sarge in Lickskillet, Texas

From the Lewisville Police Chief's Weekly Update
(week of Aug. 18th):

Kealy Tower Site Update

We moved our transmit antenna on the Kealy
Tower site to better improve our radio signal
south of the tower. Initial tests conducted after
the antenna move showed an improvement of
over 20 dB to our radio signal south of the tower.
This is a 10-fold increase in power. Additional testing
will be done this week to see if we gained measurable
improvement in locations south of Corporate between
S.H. 121 and I-35.

28852. DFW To Unveil New Founders Plaza On September 17

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-29 01:41:30 UTC
From: btickner@juno.com
Topic: 28852 Message: 28852

An article from Aero-News.net
DFW To Unveil New Founders Plaza On September 17 Thu, 28 Aug '08
Airport Seeks Best Stories, Photos Of Plaza memoriesDFW International Airport announced Wednesday its Founders Plaza observation area will reopen with a public celebration on September 17 at 10 am. A community favorite and Airport landmark, Founders Plaza will offer tourists, school groups, families and aviation enthusiasts a larger site and more interactive experience to learn about the scientific wonder of flight.

The public celebration -- which coincides with the 35th anniversary of the dedication of DFW -- will feature a parade and singing performance by Olympic gold medalist Carly Patterson. The airport is asking visitors and longtime fans of Founders Plaza to send in their best memories and photographs to be posted on a special Web site (at the FMI link below), as DFW makes finishing touches at the new park.
"We are very pleased to reopen Founders Plaza to the thousands of local citizens and tourists from around the world who make a visit to DFW to learn more about aviation and how our Airport powers the North Texas economy," said Jeff Fegan, CEO of DFW. "Founders Plaza is a community treasure and a place where we are proud to host the public. We hope it serves as an inspiration and fuels the imagination of all who want to understand aviation and history of flight in North Texas and continue the legacy."
The new Founders Plaza will overlook the northwest quadrant of the airfield from its elevated location at the south side of Texan Trail and North Airfield Drive, just south of Highway 114 in Grapevine. More than double the size of the former site, the new Founders Plaza will feature more parking, shaded pavilions and around-the-clock security.
The new site's observation area has phenomenal views of the airport and a sound system so visitors can hear the airport's air traffic controllers direct the more than 1,900 daily flights arriving and departing DFW. It will also be home to the popular "Share the Dream" statue that was dedicated at the former site in 1999. And the Airport's historic light beacon will serve as the centerpiece and focal point of the new location.

Founders Plaza opened in 1995 as a tribute to the founders of DFW, whose vision was to create not only a world-class airport, but also a major economic engine for the entire North Texas region. Founders Plaza was relocated so DFW could proceed with its innovative perimeter taxiway construction, aimed at cutting aircraft taxi time to terminals and increasing safety.
The new Founders Plaza is located at 1700 N. Airfield Drive -- at the intersection of North Airfield Drive and Texan Trail, near the northern end of runway 36R/18L.
"Founders Plaza is the premier aviation viewing area in North Texas and considered one of the best in the world," said Jan Collmer, former Chair of the DFW International Board of Directors and a renowned aerobatic pilot. "It is truly a place that aviation, education and technology come together for the young people of our region and indeed visitors from around the globe. And its new location will allow even easier access to tourists who come to North Texas and want to do something fun and free with the family."

The previous Plaza site on the Airport's southeast side played a key role in DFW history, including an employee memorial on September 12, 2001 following the 9/11 terrorist attacks. It also hosted the Airport's 30th anniversary celebration in 2004.

Over the years, Founders Plaza has also earned a soft spot in the hearts of North Texans as well as made multiple "Best Of" lists compiled by community media. The Fort Worth Weekly voted Founders Plaza "Best Place to Watch a Sunset" in 2004.

The Dallas Observer voted Founders Plaza Best of 2003 "Best Free Kids Outing." Conversely, the former location was also recognized as "Best Place to Make Out" in 2000 by the Dallas Morning News (which goes to show... the local airport often holds special significance with many in the community, for a number of reasons! -- Ed)

Heck, the Chief just needs to ask the firefighters at station 3, or he could just ask me, even :-P

They have drastically improved the quality of the system for me, its working just about as well now
as it was back when it was still single-site on 2450. /me is a far happier camper.

I'd figure they moved the transmit antenna up to the top of the tower so the signal isn't getting nulled out
by the tower itself. Will need to go see if that's indeed the case.

My understanding is that Lake Cities is now hurting coverage-wise, so we'll see what happens.

Thats pretty cool. I've been looking for more Hurricane Web Tracking sites for my website. Thanks Sarge.

And speaking of Hurricane's, Hurricane Radio Traffic will probably be getting busy by this weekend into next week on the Hurricane Nets, HF, UHF IRLP, etc for Texas and Louisiana since Gustav is predicted to be a "Major" Hurricane.

Considering that every move that you made was captured by surveillance cameras, I bet we would have had some "rather interesting" videos if You Tube had been as popular back then! The terrestrial version of the Mile High Club!

Brings new meaning to "bringing it in on the glideslope".....

I know during the Katrina / Rita Hurricanes I was listening to 444.300 (IRLP)(Fort Worth). I was hearing the Hurricane Nets down in Louisiana, Mississippi and Texas. AT THIS TIME, it looks like the track will take it into South / SE Louisiana with a NW track.

Certain weather media people, or person, are saying that we, North Texas, will not get anything from Gustav, rain etc. Hard to believe because when you look at the NHC forecast track, its showing when it moves inland with a NW track to possibly make a slight left turn, being that close, and it being a Major Hurricane, we should at least get some of the rain bands off it. Who knows? I know itâ☐☐s still too early to tell. We do need the rain though, just not the flooding.

I bet Melissa knows some frequencies.

Blaine,

To search for IRLP nodes in your area you can go to http://www.irlp.net
Click NODE INFO on the menu on the left of the page and search for nodes in
various ways. Also on the main page there is a link that shows nodes that have
live streaming audio.

You can also search for EchoLink nodes at http://www.echolink.org/links.jsp

I don't know whether or not any of them will carry hurricane traffic.
You might see if you hear anything on 442.975 (E Ft Worth) or 444.675
(Richardson). Both of those repeaters have EchoLink and the guys that run them
like to listen to stuff like that.

Blaine,

Try the DFW-R repeater on echolink it is 442.975 PL 110.9 or the KY5O-R repeater at 444.100 PL 100. I haven't heard anything on IRLP as of yet.

Another thing you can do, especially if you have an outdoor antenna at
a good height, just scan the 440 band and listen. That's how I found
some frequencies one year. Even try and scan 2 meter. You won't hear
as much as 440, but I remember one year a 145 frequency was linked to
something. But that's the best thing to do is just scan the band and
see what you can pick up.

Hi Tom & List,

Thanks for the information links Tom. I know many do not listen to HF on this group, but if you have an HF receiver with USB/LSB (or a BFO knob) you can hear the net most times on 14.325 MHz (13425 kHz). I'm hearing it as I type this e-mail. I haven't been receiving the stations around Cuba too well but the American side net operators are loud and clear. There are other frequencies they do use but this is the primary daytime one and always seems to be used most often.

The Hurricane Watch Net has a website where they normally stream the nets communications. They can be found at http://www.hwn.org but the streaming audio part was down yesterday...

live streaming audio.

You can also search for EchoLink nodes at http://www.echolink.org/links.jsp

I don't know whether or not any of them will carry hurricane traffic. You might see if you hear anything on 442.975 (E Ft Worth) or 444.675 (Richardson). Both of those repeaters have EchoLink and the guys that run them
like to listen to stuff like that.

From: Richard Whitenight
Topic: 28869 Message: 28869

My brother was cleaning out my Father's house, after he (my Father) moved to a rehab facility, and found said portable scanner. I'm now in possession of it, but I don't have any instructions on how to program its 10 banks of 20 channels each. Has anyone ever owned one of these in the past, and if so, might be able to instruct me on how to program it? I suspect it is limited in what frequencies it can scan and I'd be willing to bet it has no trunking capabilities. I'd basically want to program my favorite railroad and airport frequencies. TIA.

Richard,

All your questions should be answered in the PRO-34 online manual.

http://www.5612.com/radio_shack_pro-34_manual/pro-34%20scanner%20manual.pdf

Good luck.

Toby

Speaking of Radio Shack scanners, I found this link to the Radio Shack
website that list all their scanners manuals, features, specs, etc,
which I thought was kind of neat.

28873. Gustav Broadcasts

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-30 20:59:53 UTC
From: K8DNE
Topic: 28873 Message: 28873

FYI: Charlie KC5OZH, one of my Rowlett RACES Ass't Radio Officers, is now broadcasting Gustav updates on 441.950Mhz. If you are in a high intermod area, you can use 110.9Hz as a CTCSS.

He is still testing, but it surely sounds good when it is up.

28876. Refugees are inbound...

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-08-31 01:47:40 UTC
From: Jason
Topic: 28876 Message: 28876

I was told to expect to be activated at about 0800 tomorrow (Sunday) morning for Tarrant County RACES.

Shelters are going to begin to open for folks seeking shelter from the hurricane.

I will be manning my radio and my laptop at some point yet to be determined.

I'll post whatever I can. We'll be operating in the 2m Amateur Radio band, a mix of simplex and repeaters I'm sure.

Direct link to New Orleans EOC:

http://la.scanamerica.us/playlists/la/orleans/scanner2f-1220151382.asx

Very informal and interesting at this point to say the least.

Just heard Mayor Nagin on the radio I believe....If it
wasn't him, it damn sure SOUNDED like him......:)

I believe the proper termination is "evacuees", not refugees. These people are seeking shelter from a Hurricane, not from war, political oppression, or religious persecution. You might to look "refugees" up in the dictionary.

And I believe all the (active and current) TC RACES and ARES members have already gotten the e-mails, pages and phone calls on whatâ☐☐s going on.

well, maybe a 50ohm dummy load on that reply was in order. or a deeper dictionary search. [g]
regardless of how people slew words around and redefine them in religious or political or other terms, the etymology shows:

ORIGIN late Middle English : from Old French, from Latin refugium, from re- 'back' + fugere 'flee.'
>

> Refuge is a place or state of safety.
>

the definition of a refugee, at the root, is simply someone who has fled to safety ... .to a refuge.

political correctness rears its ugly head when people tamper with words. and i like words and i hate to see them ill-defined and twisted out of shape.

From: Blaine Brooks
Topic: 28889 Message: 28889

Sitting here watching "traffic watch" from WWL TV on
the computer. As a former radio/TVtraffic reporter, TV traffic
has always amused me, and frankly, in many aspects,
I think it's downright ridiculous. Granted, if you're
watching BEFORE you head out, it MIGHT be helpful,
but conditions change so much at a moments notice,
by the time you exit the house, enter your vehicle, and
get on the road, conditions could have changed
DRAMATICALLY. And what do the reporters do? ...
Talk to you as if you got a freakin' TV in your vehicle!!!
"If you're headed outbound on the I-55 it's gridlocked".
Well yeah, maybe I am "headed out on I-55, but I left
the TV at home, you moron! I can't f'in hear you!!!"...

Afternoon traffic is even more ridiculous ... as if they
are expecting every employee to have a TV in their
break room!.

It's all fluff. If they really wanted to do it right, the reporter
would say "and when you get in your vehicle, you can
hear me with up to the minute coverage on XXXXX
radio..." But god knows that would lose viewers from
the TV station, and heaven help us, we wouldn't want
that!...;)

Ok, just had to vent, soapbox off.....back to watching
the WWL "traffic babe" LOL....and memories of
hugging Tammy Dombeck.....

Hi Again Guys & Gals,

Since yesterday, I've been catching traffic on 6352/EMO 15 and 12240/EOC 13 on the FWPS 1 system. I just heard EOC 13 called "Ch. 13" so I guess the radios being used still indicate that channel. Greenbriar (not sure who this user is) was told by another person on EOC 13 this was the channel they were told to use. Shortly thereafter, the FW/TC EOC came up. I guess everyone's getting ready. Traffic has been boring thus far, and in the previous 2005 evacuee use of the FW and TC EOC TGs, it was boring then too. Meadowbrook just came up on EOC 13 doing a radio test too. I can't recall (and haven't checked), but these named users may be TC Jail facilities?

They do make GPS receivers for the car that have traffic available for a subscription fee. Some of them are supposed to be truly real-time, and some are based on the traffic services that feed the radio stations (ie delayed somewhat). Apparently some of the high-end ones actually report your position and speed back to the provider to indicate problems on the freeways. For the price of these things, I'd have to give them a good test during rush-hour to determine if they are worth the expense.

What gets me is (especially Dallas) they use the locals terms for the roads and intersections and not what an out-of-towner may read on a map. ie I-30 south of downtown Dallas is 'the canyon'. Just tell me the highway designation and the exit / cross-street info.

The names "Meadowbrook" and "Greenbriar" are community centers being
used for shelters.

Almost agree with you totally. However, I have a 25-mile commute from Rockwall to Dallas in the mornings. I monitor Channel 8 to see if there is anything happening on I-30 that is severe enough to warrant me heading south to Hwy 80. For instance, if I hear traffic is stacked up from LBJ to Lake Ray Hubbard, I know that it'll probably not clear by the time I'd be going through there.

But generally, I'm with you on everything you said.

David,

With what group will you get to assist?

I've been told what limited RACES response is presently in play will be ramped down, and that essentially was helping out at the EOC, as there has been basically no radio traffic on the RACES repeater.

> i am in need of a good antenna to mount on my house. I need it to pick
> up Carrollton PD frequencies and I live appx 20 miles away. Does
> anyone have any suggestions.

If you are just interested in monitoring Carrollton
(as you have stated) and no one else, then I
would suggest a 800 mhz only antenna (in other
words - SPECIFIC for that band). Be advised
though - commercial "band specific" BASE
antennas can be very pricey - one I saw was
about 150 smackeroos .

Your other (much cheaper) option is to get a
discone antenna, or something like a Scantenna,
which to me looks very flimsy, but numerous
monitors say it's a great performer. I just
wonder how it stands up to our thunderstorm
winds 20+ feet off the ground. I personally
had (still have) a Diamond discone that was
a very good performer.

I'd also go with LMR-400 cabling if your run is
going to be more than 50'.

When I was in the house, I had an outside antenna
(discone) up about 30-35' on the top of my chimney,
with an run of RG-6U. For that short of a cable run,
the RG6 performed very well. Now that I'm in an
apartment now (ugh!), I have to deal with just having
a little mobile antenna out on the patio. However, at
some point, I do plan to mount my old discone on
the patio railing. It just depends on how long I stay
here. I obviously want to get out of an apartment as
quickly as possible. Unfortunately, my milcom
listening has sort of taken a back burner.

Agreed on the band-specific antenna. That's the way to go if 800 is all you need. But eBay is your friend. I got a brand new 12 element 800 yagi for around 30 bucks or less. So commercial antennae can be had dirt cheap if you know what to look for on eBay.

Good luck!

You might want to check out the scanner antennas Wiki page on Radio Reference:
http://wiki.radioreference.com/index.php/Scanner_Antennas
Besides links to various antenna sources, there are some for antenna construction projects.

For monitoring an 800mhz system, an old cellphone external antenna works very well, after you add the appropriate connector. You can also modify an old tv antenna in a directional beam antenna. That's what Grove's original ScannerBeam appeared to be based on.

I've got a couple of ScanTennas mounted on the roof. They've survived the wind with no ill effects. I did lose one to an 8" thick tree limb that split & bingo'd it. On the antenna Wiki page (link above) is a mod for the ScanTenna (also sold under the model ST-2), to use a bike flag to reinforce the longest vertical element against wind or potential ice accumulation damage:
http://wiki.radioreference.com/images/8/8c/Reinforcescantenna.jpg.

I can get the Plano at my home using a ScanTenna. I have that particular one split, using a cable splitter, and one feed goes to a BC246T, receiving Plano, among several other systems on that scanner. The other half, I use for one of the other scanners, if I'm doing a specific log/record trial, or trying to see if I can get a certain system at all. The other ScanTenna feeds a 996, in a different room. Plano is a little over 20 miles (to the closest xmit site), probably more like 25.

The ScanTenna performs better on Vhf-high & Uhf. It will receive 800, of course, but that's not it's strongest area. It's not really a gain antenna. It does come with 50 ft of RG-6U coax, and connectors, which is what I'm using. As Blaine's suggested, for longer runs, use lower loss coax.

There were several that showed up at the same time. At least two were bringing in burn victims from a propane water heater explosion. That was in the Corsicana/Fairfield area. I think there may have been a couple of others on unrelated runs. Heard Lifestar hot offload and move to flying in an orbit in order to clear the pad.

Just heard E-13 check out of service at this location and request a BC & police. At first I thought it was an MVA involving fire apparatus, but then E-13 refused to give the nature of the call and sent it via MDT message instead. Naturally this raised my curiosity. Then when the BC checked enroute 660 asked for a call by cell phone. So something's going on and they're being secret about it. Anyone have any idea what it is?

From: newtexr
Topic: 5129 Message: 28914

Hello everyone,

I live up in Frisco and want to listen to Carrollton PD frequencies. After many tedious hours of figuring out how to program my new Uniden 898T scanner, I finally got all of the frequencies to programmed with the ID's etc so it only picks up the PD portion.

Can anyone recommend an antenna that would work with my Uniden? I live almost 15 miles away from Carrollton and have to turn it off because it is too staticky.

Thank you for any help.

Rob

All:

I don't know what to make of this just yet. The user that posted this
has posted to the list before on a regular basis.

Until we get more information, let's not rush to any extreme measures.

What cought my attetion was this same post has now been on 3
different groups i am on, one being 2-way related, the other cellular
related.
One group deemed it spam related because they say the site asks for
your yahoo user id and password. I think the thought is the grouply
company might leak the info or not gaurd that info as close, then
that gives spammers access to that info.
I wasnt meaning to say that was spam, just that in one day its poped
up 3 times now and some people didnt want it. I think Melissa also
said she got the email not from a group but as an individual email.

I didnt mean to imply someone who has been on the list for a while
was a spammer.

Its possible its completely legit and the people on the other list
jumped the gun. Either way i just wanted to let people know it was
discussed on another list.

Bed time, enjoy eveyone and have a great night.

Ok, been scanning the FRS/GMRS band and I noticed this last year but didn't think anything of it till I heard them again now.

On frequency 462.625 (192.8) there is this steel company using that frequency for commercial use, and I was wondering is that legal per FCC?

And I found out it was a steel company cuz I asked, "who is this".

They are using a repeater TX on 467.625 with a PL of 192.8 with no ID

I didn't asked what company it was or where they were at, but at I-35W and Whilshire I was getting 5-6 on the meter on an HT with the strongest signal South to Southeast.

So, I was just wondering if that company was allowed to do that because they are annoying.

Thanks,

David, KC5RHB

P.S. FRS/GMRS Radios have no lockout, thats why its annoying

Exhale folks...it was a mistake (on my part.) I was given the link by, let's say, a 'trusted associate' and just signed up on good faith (or stupidity.) I have since learned - in the past 24 hours - it is somewhat of a cancer.

I just figured it was a Plaxo for groups or something. Not the case. I reckon I need to pay more attention to the details.

Disregard....DO NOT DO THIS grouply thing.

28921. Johnson County's LTR System (Question)

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-04 00:28:35 UTC
From: KC5RHB
Topic: 28921 Message: 28921

Ok, this is giving me a headache now. I believe the last post on this was FD was going to LTR and not PD.

I was programming some radios and decided to go ahead and put the LTR frequencies in just for the heck of it. One, I'm not hearing any clicks that you usually hear from LTR frequencies. Don't know if I'm too far away, I'm in Burleson. Two, on 154.0925, which shows to be one of the LTR frequencies, I was hearing what sounded like PD traffic, had a tone of 88.5. So I did a search on that freq and it showed to be Grandview PD, which is in Johnson County. Am if I hearing Grandview, I should hear the LTR clicks from Cleburne.

So, I did some searching on RR, which shows no TG's. Look at the past posts on this and didn't find anything new.

Bottom line is I guess, do I just add the old and new FD/PD stuff and call it a day?

Ok, I think Im loosing my mind. That PD traffic I was hearing was bleed over from Crowley PD (154.100). What caught my attention on this was I heard a unit do a traffic stop on 1187, and I thought for a sec, there is no 1187 in Grandview. So, I think I will just add the LTR frequencies in, keep them in conventinal mode and keep the old frequencies in too.

Ok, I didn't think you could run a repeater on a "dot" frequency, just simplex. But I know you can run a repeater on the GMRS side, with a license of course. Who knows, I just know the traffic I hear from them is annoying. Thanks for the reply.

There are no paging tones to dispatch stations. It is all done via a WAN connection (network). When FAO dispatches a run, the CAD sends a message to the station to be dispatched. A computer in the station gets this message and speaks the dispatch text out over the stations speakers. The days of tone out dispatching (in FWFD's) case are long gone.

Please ignore the attached SPAM - I have no control over it.

28934. Re: Johnson County's LTR System (Question)

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-04 13:04:53 UTC
From: Chris Easley
Topic: 28921 Message: 28934

Well I wouldn't get to worried about what to add at this point. For starters, the system is supposed to LTR Passport, which means no trunk-tracking. Secondly, Cleburne FD is currently the only user on the Passport system. And at that, the frequency they're on (155.145) is being used in conventional mode.

Keene FD and Alvarado FD are back to using their old freqs and using them in conventional mode. As far as Grandview PD is concerned they're dispatched by Johnson County on 158.745 PL 136.2 . They might be using 154.0925 as a 'talk' channel. However I suspect you might be hearing another PD, just spit-balling here.

As far as the data blips, well they have moved from freq to freq, just depending on what frequency is being used as the control channel. I've heard the data blips on just about every frequency on this system.

Bottom line, I wouldn't worry about programming a thing for this system right now. So far this Passport system has produced more problems than anything.

Chris

28937. Johnson County Sheriff Frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-05 00:32:46 UTC
From: KC5RHB
Topic: 28937 Message: 28937

Well, I thought this was going to end, but I guess not.

I kept wondering why I wasn't picking up Johnson County SO on 158.745 (136.5) and 155.6625 (423), I thought it might of been my location or radio.

Then I started to see the "busy" icon flash on the screen, so, I took all the tones off, and there JCSO was, talking.

And along with it are LTR clicks. So 158.745 and 155.6625 are still broadcasting JCSO traffic, but I guess they changed those frequencies over to LTR, because I'm not getting any PL tones when they talk and I'm hearing the LTR clicks every 2 seconds on both frequencies.

So, I guess JCSO has went to LTR. RR might want to update this.

Man those clicks are annoying. Its like someone keeps keying up the radio every 2 seconds.

They must of just recently changed over. It wasnt that long ago they
were talking on conventional, now radio service is on there on and off
doing radio tests. And in the background when they key up you can
hear the PTT trunk beeps.

28939. Johnson County

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-05 00:57:51 UTC
From: Gary Moseley
Topic: 28350 Message: 28939

We (Cleburne PD) were told today that Johnson County S.O., which will also include the police depts of Grandview, Rio Vista, Joshua, etc, has switched over to the LTR system. This was unannounced to anyone down here. Means that us (Cleburne PD) Burleson PD and Alvarado PD have no comms with Johnson County or the related smaller agencies. This switch occurred a few days ago.

Heck, even DPS can't talk to Johnson County S.O. now and are using our dispatch to run 27s and 28s.

So it is understandable what you were hearing, you are not losing your mind.

Sgt Gary Moseley
Cleburne PD

Well now I'm totally confused. Last I heard the SO and rural PD's
did not get the funding to make the move to the LTR Passport system.

So did the funding come through, or are they just letting SO use
the system to further work out the bugs?? That's what they were
trying to do originally, when they put Cleburne, Keene, and Alvarado
FD's on the system first. Even though it didn't work out that well.

I sure hope that all this means is that Johnson County is just
doing more testing with this system. On the other hand, if the
system is now fully operational and working fine, then when can
we expect the rural FD's to make the switch?? Because if any
agency in Johnson County needs this new system it's the rural FD's

I'd suggest using Radio Mobile or a similar coverage analysis tool to determine the necessary antenna. At 50 miles, there's a good chance some terrain feature between you and the transmitter site will cause you problems. You'll need height to overcome whatever terrain issues you might find - this may be a small tower or a push-up pole. For an antenna, a UHF yagi of reasonable gain with decent feedline (depending on length) will probably suffice.

If you can't clear the terrain, you're hosed anyway.

I would get a UHF yagi antenna specifically for
440-470 mhz. Heck, even a ham 440 yagi may
do the job. Get that baby up as high as possible.
At 50 miles you'll be pushing it, but it's certainly
do-able. Point it as best as you can towards
downtown Dallas, and listen to what happens.
Obviously, a tone enabled scanner on 173.8 PL
will certainly help in ID'ing the source, and being
able to maneuver the antenna around for optimal
reception.

Then, the other alternative is just to listen online
to something like Matt Stone's online DPD
scanner (covers all DPD & DFR) - including
460.175:

http://tla.no-ip.com:8000/listen.pls

Good luck!

28945. Johnson County cont.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-05 17:57:13 UTC
From: David J. Wallis
Topic: 28945 Message: 28945

We were first notified to switch over about a week ago early one night. We actually had to call the county back and advise them that no one had ever come around to program our radios initially. That's been corrected and to my knowledge, we are still "switched over".whatever that means right now. Portable radio performance is currently worse under the new scheme than we had before.

In regards to Chris's question on funding, I do not think the county has received more funding to distribute additional radios to the law enforcement community. I've gotten the impression that fed funding has dried up considerably as compared to when this system was first conceived. I've also heard that the ESD here has funded additional radios for the fire departments only. One proposal floating around is to distribute portables to the VFD's to use as their paging devices for individual members. I've also heard that the FD's are supposed to go live within 90 days. Godley recently received its fire base station antenna, and I've noticed a few more popping up around the county.

That's about all I've heard. News doesn't drift very far westward to my area.

Sincerely,

David Wallis

Mayor - City of Godley, TX

There's also a very strong Ch 6 transmitter in North Dallas on a tall tower on Frankford Rd. If you're going to use a yagi, you might try pointing that way. I've picked this channel up on a mobile as far out as Denton (to the NW) and the Collin/Fannin County line (to the NE). A good tall antenna should do it.

The PRO-97 can't do LTR Passport, just LTR Standard.

I have several 97's and they won't work for LTR Passport. I don't know if any of the new digital scanners can do LTR Passport. But I know none of my old analog trunkers can do LTR Passport, just Standard. You can still listen to Johnson County in conventional mode, if you can stand listening to the "key-ups" every 2 seconds. Hope this helps.

Unfortunately not Don. Presently, there are no scanners available that can decode Passport LTR. You can listen to the frequencies, but the data bursts every two seconds will drive you crazy. It has been reported that the developer of TrunkPCR is working on incorporating Passport into his software, but that was back in May:
http://members.cox.net/fiftyone.50/TrunkPcr/TrunkPcr.html

No, scanner manufactures have not licensed the format and there are no scanners that will follow it. You can scan the frequencies as conventional and hear traffic just not trunk it.

From: Gary Moseley
Topic: 28350 Message: 28951

Johnson County went to the new system suddenly due to a "use it or lose it" for the frequencies from the FCC.

Cleburne FD stopped using the Passport system because it was interfering and drowning out Granbury FD. Word on the skreets is they got a "cease and desist" from the FCC.

The smaller PDs in the county that always used Johnson County S.O. will be using the new system. Cleburne PD WILL NOT be going to the system...ever. Got that on good authority.

As for the rural volunteer FDs in the county, they are staying where they are on the old system for now.

DPS units in the county are using S.O. handhelds when they need to contact the S.O. A real crowd pleaser, I am sure.

Cleburne PDs mobile and handheld units will updated with the new Passport system freqs next week, so we can once again communicate.

And that, is all the news that's fit to print today......

Gary

28955. McLennan County & Skip Tonight

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-07 03:26:41 UTC
From: commscan
Topic: 28955 Message: 28955

Hi Groups,

There is some apparent skip or ducting going on tonight in the VHF and UHF bands in the N. Texas area. I've been listening to a few agencies down south of D/FW like Hillsboro PD's P25 155.865 frequency. But I came across a new one (for me). I've known the frequency for years but thought it would be unused with McLennan County's 800 MHz use now. I'm receiving clear traffic on 154.875 PL 100.0.

I'm not sure if this frequency is still in use by the smaller PDs in the county that may not be on 800 MHz radio yet or just what the reason is for this channel's use. At one point, I thought this was an FD on frequency. But then I heard a DL return to Waco and another to Horseshoe Bend. I then heard Old Bethany Road and Lorena mentioned as locations. All of these (plus some other traffic) confirm McLennan County's use of this frequency still.

Does anyone know what this purpose of this frequency is? I've seen the RR.com listing for McLennan County SO 1 and how this frequency is simulcast with Waco's TRS TG 528. Is this frequency still used regularly in McLennan County?

Thanks for any additional information.

Brian

I've got a Linux box with an HD tuner card running MythTV. All the
goodness of HDTV, and Tivo without paying Bill Gates a cent.

If you have a spare PC (of recent vintage) and $100-200 to spend on a
tuner card, look up MythBuntu. A Linux distribution designed to be a
media center. Plays DVDs, CDs, records and plays live TV, etc...

28958. Data (MDT Signals?) on 460 MHz Frequencies

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-09 08:05:04 UTC
From: commscan
Topic: 28958 Message: 28958

Hi Group,

I've been receiving data signals on 460.0375, 460.1125, and 460.2375 with a PL tone of 131.8 the last few days. The FCC Database is down at this time so I cannot look up the information needed to see if there is a common user. Tonight, there is data on 460.1125 and 460.2375 at the same time and nothing on 460.0375. Last night, I only received data on 460.0375. The 131.8 PL tone, 460 MHz range, and the data sound is all I have noticed in common thus far.

Anyone know who the user may be and/or what the use is? The data in constant and has no breaks in the transmissions. It may be MDT data but I really cannot tell.

Well, the FCC database is up and running again and I see that Southwest Regional Communications Center in Desoto/Cedar Hill is listed with all three frequencies. I seem to remember some recent talk about the TRS down that way but I obviously didn't pay too much attention to the thread at the time it seems. I'm still confused as to what type of data it is that I'm hearing on the frequencies mentioned though...

MPT-1237, the same kind Decatur PD has.

Used primarily in the UK and European nations. Rare here.

Hi Blaine & Group,

Yea, I was advised this was the data from that type of TRS. It made me wish I'd paid attention to the thread on this system very recently on this list too :)

I've heard the Decatur system off and on through the years but do not remember their system's data sounding like this. Actually, I thought it was more of an LTR "blip" type of sound but I wouldn't bet the farm on it.

I'm confused as to why there were two active data channels last night too. 460.1125 was weaker than 460.2375, so I'm guessing there are multiple sites. I'm not being lazy (at least on purpose), but I still haven't looked at RR.com to see yet.

Thanks for the reply Blaine and to the others who replied off list too...

Topic: 28963 Message: 28963

Hi Group,

Here's another frequency I've been listening to since yesterday. I captured it and added it to my PL tone database long ago, but I never really followed up on it. This has been a fairly-to-very clear station and from what I've been hearing I wonder if it is Lockheed's Grand Prairie facility security. They're listed on the FCC database site and the traffic sounds like it could be them.

Has anyone else ever heard or confirmed the use of this frequency and tone?

It sounds like we may have some more skip/ducting possible tonight. I love the DX'ing so I hope so.

28967. USCG Rescue on 8983 kHz USB

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-11 02:26:36 UTC
From: commscan
Topic: 28967 Message: 28967

Any HF monitors might want to put in 8983 kHz USB (8.983 MHz) for a rescue ongoing. There are multiple USCG Rescue helicopters, at least one USCG C-130, and it sounds like other USCG vessels either on scene or enroute to help. Persons on board the vessel in distress are being taken to Guantanamo Bay, Cuba at this time. It is making for some interesting listening even though the band is a little noisy (static popping) tonight).

Hi Brian,

I have heard it up here in West Plano but mainly when the DX is coming in. I never been able to confirm who it is either but I have logged activity on it quite a few times even in the late evening/early mornings. I have been wondering who this belongs to and would be eager to find out.

Hi Bill & List,

It looked like the C-130 aircraft on the news this morning that are flying back and forth between DFW Airport and Corpus Christi transporting medical evacuees were the Texas Air National Guard (ROPER ## callsign...181st Airlift Squadron/136th Air Wing) aircraft from Navy Fort Worth. And listening to their TG (9760) on the Navy TRS, it sounds like it's them too.

There seem to be a lot of hurricane evacuation aircraft coming back again too if anyone cares to listen to the Navy Tower, Ground, and Regional Approach/Departure frequencies...

Could it be a wireless antenna of some sort? Most GPS antennas and receivers are very small and look similar to the satellite radio antennas you see on modern cars. Some local cities are implementing wireless -- do a search for MOTOMESH. I was 'monitoring' some WiFi stuff driving to work the other morning and saw several MotoMesh sites as well as what appeared to be other non-civilian wireless sites.

From: commscan
Topic: 28978 Message: 28979

Ooops...I accidently sent the following to myself instead of the group (forgot "Reply All" at 11:54 AM:

****

Rescue 2120 is on scene with the vessel carrying 22 people in the Gulf of Mexico and being rescued (or attempted to be rescued) at this time. Winds are 70-80 knots. Rescue 2001 is en route back to scene from home station Miami.

Current vessel position is:

2742.8 N
09344.6 W

5 USAF rescue aircraft are en route to scene to assist but have a time restriction on how long they can assist. The USAF a/c will contact USCG 2120 on 123 AM (probably 123.1) and 243.0 AM. "345 HF" also given, but this makes no sense to me. 2 VC-22 Osprey and 2 HC-130 aerial refueling aircraft are part of the assets being sent. Conditions are deteriorating and the vessel is dropping according to on scene rescue helicopter.

I am hearing the communications between the USCH rescue aircraft and Communications Area Master Station Atlantic (CAMSLANT) Chesapeake better than they can they hear each other many times.

****

Here's a current update. The ship was not sinking fast I believe. It was the barometric pressure most likely. This ship is also flying a Liberian flag.

Subject: [dfwscan] Ft Worth PD Patrol Unit, 3rd 800Mhz Antenna (Question)

Hello Group,

Been seeing a lot of Ft Worth PD units now with a 3rd 800Mhz (phantom)
antenna on the units. It's up by the back window. Of course the
first two are the radio and the MDC, and the VHF audio/video antenna
on the side of some units. Any ideas what the 3rd 800 antenna is for,
(radio, type, etc)?

David, KC5RHB

28985. RE: Another 8983 kHz HF USCG Rescue

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-13 02:16:06 UTC
From: commscan
Topic: 28978 Message: 28985

Hi Blaine & Group,

I'm sure I can do it but never have. I really never tried I am not sure what to do. I've just recently got HF back up and running again due to the help of some of our list members helping me get an antenna back up and working.

It's something I'd consider doing but have yet to do.

Hi Group,

I'm hearing the Texas Emergency Net (Echo Link I believe) relay from SE Texas on 442.975 with no PL. I'm hearing Houston EMO, Orange County, Galveston Co., etc. It appears Galveston (city) has lost power at this time.

Another VoIP net is on 145.27, but it is slow compared to the net on 442.975. It's becoming interesting from the sound of it. Tons of traffic is being carried on the net too.

I'm getting the best signal here in Lewisville on
the 444.675 repeater (PL 110.9). 442.975 is
just too scratchy. However, 145.270 is pretty
strong. Good listening.

Looking at the Houston radar on GRLevel3. Pretty
impressive. Especially the wind velocity around the
eye wall.

FYI to the Group....
Anyone near Rowlett and interested, I am also rebroadcasting this
weather net over my Rowlett II amateur radio repeater on 441.950 Mhz,
for the next day or so. At this time activity is sparse.
Happy Listening!

28990. RE: [dfwscan] Re: Great Amateur Radio VoIP/Echo Link Traffic

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-13 03:59:36 UTC
From: commscan
Topic: 28986 Message: 28990

I'm now only hearing the traffic from operators up this way I believe. I am hearing a simulcast of the 442.975 transmission on 440.625 with a 110.9 PL. I'm also hearing the Texas emergency Net's Health & Welfare traffic on 3935 kHz LSB too. It is actually clean tonight. The 3 MHz band is usually not one I like listening to due to noise. The daytime net frequency given will be 7290 kHz

I don't have a good understanding (technically) of just how these 2 meter/440 nets work, but I was receiving the Houston, Galveston, etc side traffic about an hour ago. Now I believe it's just N. Texas side operators (i.e. Denison, NWS Fort Worth, etc).

I noticed the net's name has changed. It use to be the Texas Priority & Emergency Net. Personally, I like the simple Texas Emergency Net title better :)

28991. Houston/Galveston Hurricane Net

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-13 05:39:46 UTC
From: commscan
Topic: 28991 Message: 28991

Hi Group,

This net has been a good one in terms of information. 443.45/PL 127.3 is the frequency and tone. It may have more meaning to me than many of you because I'm from this area and am very familiar with locations being given. I've heard the Fort Worth NWS come up a few times, but for the most part, this VoIP het has been dealing with Houston and the conditions that are occurring. It appears a lot of power is starting to get lost. I heard one person on the net who was about 4 miles from where my father and mother are right now (north of Houston about 25 miles). The operator lost power as I was talking to my dad, and sure enough, the power started flickering off and on at the house he has down there.

147.000 was given as the TRANSTAR (Houston's big transportation, etc agency) repeater. 443.45 is being called the Houston/Galveston Area Hurricane Net and SKYWARN too. This may be a rebroadcast of the 146.84 (I think) SKYWARN repeater in Harris County. I've been hearing a lot of Harris County EOC's here and not as much Galveston County stuff over the last hour. Either way, it's traffic dealing with what's going on down there and not up here.

Also, here's a link I had to find on an older PC. I've always liked this one because you can download the radar loops and play them with Windows Media Player (or whatever) if you want o.

28992. ARC396 Pro Software Question

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-13 23:48:50 UTC
From: commscan
Topic: 28992 Message: 28992

Hi Group,

I've been using an old version of Butel's ARC396 Pro program for a few years. I finally updated it to version 2.2 about a week ago. The first few days after my update, everything seemed to be working the same as the older version and just fine. But for a few days now, after clicking the "x" to close the program, I have noticed that the newer version has stopped asking me if I want to save the files/changes to files before closing the program. It asked me for a few days after the installation of the updated version but does not ask anymore. It just closes.

I've searched high and low for any setting that might play a part in this happening and cannot find any reason for it. Does anyone else know why this may be happening or has it happened to any of you using the ARC396 or ARC996 programs?

Thanks for any help.

Currently monitoring 3873 khz LSB Texas Emergency Net, W5SEG net control requests emergency, priority and logistical traffic from served agencies and stands by for response.

On 3935 N5FJis net control taking health and welfare traffic and checkins.

Good signals into Mansfield, but noise level makes long term monitoring tiring.

Bill

There's a good tutorial on the Shoutcast home page,
as well as Teamspeak. Icecast is another popular one.
You might want to private email Matt Stone, and ask his
advice on setting it up.

It's just a matter of setting up some extra audio cables
into your sound card and configuring some IP stuff.

It'd be GREAT having an online scanner from out your
way (to possibly monitor NAS trunked system &
milcom) and/or HF!

Subject: [dfwscan] Champion EMS

Anyone how Champion EMS is dispatched for Van Zandt, Rains and Wood counties? Do they have their own radio or do they get dispatched off FD?

Thanks

Terry

29003. new portable tower for Fort Worth

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-17 22:38:11 UTC
From: Ben Saladino(YG)
Topic: 29003 Message: 29003

From city council agenda:

COUNCIL ACTION: Approved on 9/16/2008

DATE: 9/16/2008 REFERENCE NO.: **P-10842 LOG NAME: 13P08-0218
CODE: P TYPE: CONSENT PUBLIC HEARING: NO
SUBJECT: Authorize the Purchase of a Portable Radio Tower on Wheels from Motorola, Inc., Using a Houston-Galveston Area Council Cooperative Contract for the Information Technology Solutions Department for a Total Amount Not to Exceed $97,475.00

RECOMMENDATION:
It is recommended that the City Council authorize the purchase of a portable radio tower on wheels from Motorola Inc., using a Houston-Galveston Area Council Cooperative Contract for the Information Technology Solutions Department, for a total amount not to exceed $97,475.00 with payment due 30 days of receipt of invoice.

DISCUSSION:
The Information Technology Solutions (ITS) Department will deploy this two-way communications portable radio tower with existing communications site equipment or as part of an emergency stand-alone communication system. In the event of a disaster or crisis, the portable radio tower will allow ITS to quickly restore an outage of radio communications services. Additionally, the unit will enable the Radio Services Division to connect to the existing mobile emergency communications trailer, which allows the Public Safety Radio Communications to be functional.

The City received a State of Texas Homeland Security Program Grant in 2006, (M&C G-15465) to enhance its capability to respond to and recover from disasters. The purchase of the portable radio tower will help ensure radio communications during disasters. The City will use Houston-Galveston Area Council (HGAC) Contract No. RA01-08 to purchase the unit.

State Law provides that a local government entity purchasing an item under a cooperative purchasing agreement satisfies state laws requiring that the local government entity seek competitive bids for purchase of the item. HGAC contracts have been competitively bid to increase and simplify the purchasing power of local government entities across the State of Texas.

FISCAL INFORMATION/CERTIFICATION:
The Finance Director certifies that funds are available in the current capital budget, as appropriated, of the Grants Fund.

BQN\08-0218\AMG
TO Fund/Account/Centers
FROM Fund/Account/Centers
GR76 541370 002442172140 $97,475.00

29004. RE: [dfwscan] radio system assessment for Fort Worth

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-17 22:40:36 UTC
From: Ben Saladino(YG)
Topic: 29003 Message: 29004

Also from the same meeting:

COUNCIL ACTION: Approved on 9/16/2008

DATE:

9/16/2008

REFERENCE NO.:

C-23055

LOG NAME:

35RADIOFY2009

CODE:

C

TYPE:

NON-CONSENT

PUBLIC HEARING:

NO

SUBJECT:

Authorize Execution of a Professional Services Agreement with Buford Goff and Associates, Inc., in an Amount Not to Exceed $293,200.00 to Perform an Assessment of the Public Safety Radio System

---

RECOMMENDATION:

It is recommended that the City Council authorize the City Manager to execute a professional services agreement with Buford Goff and Associates, Inc., in an amount not to exceed $293,200.00 to perform an assessment of the public safety radio system.

DISCUSSION:

Many of the major components of the public safety radio system were purchased in 1991 and have since reached or are about to reach their end of vendor (Motorola) support.

To assess the reliability of the radio system, determine end of life of individual components and the entire system, and devise a strategic replacement plan, staff sought an independent consulting firm with experience conducting this type of assessment. Buford Goff and Associates, Inc. (BGI), has provided these services for other governmental entities and is highly recommended by those entities. Motorola has worked with this firm and also recommended its expertise for this type of assessment.

MWBE - BGI is complying with the City's MWBE Ordinance by committing to 15 percent MWBE participation. The City's goal on this project is 15 percent.

FISCAL INFORMATION/CERTIFICATION:

The Finance Director certifies that that funds are available in the current operating budget of the General Fund. No funds were budgeted for this purpose; however the department has savings to offset these expenditures.

29005. Rockwall on Backup

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-18 01:21:53 UTC
From: Jason Simpkins
Topic: 29005 Message: 29005

I was listening here and there but here is what I was hearing. The fire guys were keying up but there was no audio and they were telling all fireground units to go to backup R. I think she said back up R was Rockwall PD. Then she told them there was 2 back up R's. Not sure what was going on with there system don't even know if I heard pd.

From: KC5RHB
Topic: 29003 Message: 29006

I believe Amateur Radio Operators have been doing this for many, many, many, decades, its called "Field Day". And the city government is just now catching on to this? You would think after the March 2000 tornado, when the Public Safety radio system jammed up, someone in the city government would of said, hmmmm.

It might take more than one to cover the whole city on 800mhz though. I believe its restricted on wattage. Well, I guess better late than never.

29007. 867.0125

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-19 20:52:43 UTC
From: Bobbie Beers
Topic: 3885 Message: 29007

Hi All,

Just had voices on 867.0125 Texas Interagency frequency/National Tac 2. Seemed to be a radio check, and sign off for the weekend. That's the first time I've heard anything on those frequencies. I have no idea where they were, but the signal was clear and strong.

Has anyone else heard that band anything on that bad before?

Regards,
Bobbie, KB5RPI

There has been a lot of state traffic going on NPSPAC (since IKE).
867.0125, which used to be NPSPAC 3, and is now 8TAC92 (Tactical 2)
can be use for who knows what. Ive heard traffic on there from the
state trucks convoying stuff down the freeway, law enforcement, fire,
to some agencies training on there. Ive been hearing a lot of state
traffic on NPSPAC 1 (866.0125) which is now 8CALL90 (Calling Channel).

So, there is no telling what, or who you will hear on NPSPAC,
especialy when certain PD's go "direct" on there for close call
communications at certain retail stores.

Happy Scanning

Hi David,

You might know...I've had those frequencies programmed in for months, but haven't been listening to much lately. Too much going on here. Being unable to put up an outside antenna is another hindrance. I was surprised to hear anything at all. It must have been close by. My range is rather limited. I hear better toward the west, but not east because of a hill behind our place.

Regards,
Bobbie, KB5RPI

From: Sarge
Topic: 29010 Message: 29010

I was told by a knowledgeable source about a circuit that can be built at home for a great AA battery reconditioner. It is contained in a video on YouTube under the name "Bedini ".

However I have a tough time getting it to load. The video will load for about 50 seconds and then playback only 3 seconds before it goes back to loading for 50 more seconds.

What is causing this slow loading and is there anything I can do to speed it up?

Thanks, Sarge

I don't know exactly where you live, but last time I looked at the NPSPAC map I believe Fort Worth has 3 repeater locations that provide different functions. I believe the one west of downtown Fort Worth is the Primary Calling station. There are also repeater locations in HEB and Mansfield, and I don't know if they are turned on or not.

The traffic you are hearing really depends if the units talking are running on the repeater or are in direct mode (simplex). And if they are running on the repeater, it also depends if they are using a HT or mobile. I've heard sometimes the HT's don't talk too well to NPSPAC in repeater mode, depends I guess where you are.

When I'm mobile I always have the NPSPAC channels in scan, and today I was over by the Cityview area (SW FW) and was hearing some FW ZT (CRT) units doing some "radio traffic" on NPSPAC 1 in direct mode. One officer really couldn't hear the other officer too well, so they switched back over to a talk channel on the TRS. But I could only hear one officer talking and couldn't hear the other one.

So you could have been hearing someone either on repeater mode or direct mode, it all depends. But I really don't hear that much repeater traffic on there when I'm mobile, but if I'm close enough, I'll catch some direct traffic somewhere.

I don't know when exactly the rebanding will happen for NPSPAC, no telling, but when they reband the NPSPAC frequencies will change, and will probably go digital. For more info on NPSPAC see this link: http://www.nctcog.org/cs/radio/pdf/NPSPACPlanRev2_11302007.pdf

But like I said before, I always have NPSPAC running, you never know what you might hear.

73,

David, KC5RHB

Here's a question for the masses:

I haven't flown commercially since before 9/11.

Do YOU take your hand-helds with you when you fly these days?
Do you carry it in your laptop bag, or check it through if you do?

I can see where some over exuberant TSA officer might get the wrong idea about why you would have such a thing in an airport or on a plane...

I'd SOOOO rather be traveling on the Goldwing! Enjoy the flying part, but don't lood forward to the airport CRAP!

Thanks in advance....

John

I am looking to buy a new scanner in the next month and I would appreciate the input of the group. You guys have a lot more knowledge than I do and would like to here from you.

I live in Burleson and listen to BPD, BFD, Some Fort Worth.

Will this scanner work with the new rebanding going on.

Would you buy this one or would you go with the BC-246T?

Thank you in advance.

Don Newman

29016. Re: Longtime scannist, infrequent flyer

John - I travel often and my handheld scanner (BC250D) is always along with me for the ride. I almost always pack it in my carry on bag because I don't feel comfortable having it in my checked bag out of my sight. However, I have never run into a problem with TSA, and in fact, I've never once had to even take it out of the bag to show them what it is. The only minor issue I've run into a couple of times is the telescoping antenna I take along with it. On a rare occasion when it is packed at just the right angle, it has looked a bit like a sharp object when TSA views it on the X-ray monitor. But after a quick look in the bag, all is good and I'm on my merry ol' way for my usually delayed flight.

So you shouldn't have any problems getting through. And if you do, I'll come visit you in Club Gitmo next time I'm down in Cuba... ;-)

Take it with you on board. I do and haven't had any problems. I fly 2 to 4 times a year usually and haven't once had a problem. The last couple of times I've even had my HT ham radio with me and still no problems. I don't check anything other than clothes and stuff I could care less about. I don't trust them looking in my bags while I'm not standing there. Not to say that they would have "STICKY FINGERS" but they may forget to replace something in my bag.

I've taken a pair of XTS5000s along on a few flights (which look nearly identical to the radios TSA carries) and have not had a problem. I would not check anything that you actually care about - check your clothes, toiletries, and other things you can replace at the Walmart. Check the valuable stuff.

29019. Re: PRO-162 Yes Or No and why.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-22 05:00:27 UTC
From: KC5RHB
Topic: 29015 Message: 29019

Don,

I too live in Burleson. The RS PRO-162 will do the rebanding but it is not digital. The BC-246T will not do rebanding and is not digital.

Burleson will not be affected by the rebanding because they are on UHF and they just recently got their new radio system. And I don't see Burleson even going digital either, too much money involved.

The only city that would be affected by the rebanding would be Fort Worth, and no telling how many years that will happen. And when Fort Worth does reband, you can guarantee they will go digital.

The PRO-162 is on sale I believe and is flash programmable (rebanding) when it does happen. But from what I understand, the rebanding will affect Public Safety communications in the 800mhz area, and more than likely those that do reband will probably go digital. So, I wouldn't worry about the rebanding issue right now with a scanner unless you get a digital one. Unless the flash programming will make it digital, but I don't think it will. No reason to make a scanner capable of rebanding if it's not digital capable.

If all you want to do is listen to Burleson and Fort Worth, and want to save a little money, I would go with the PRO-162, or a GRE scanner, which is a little more expensive.

But at this time there is no scanner out there that can trunk Johnson County SO, that's if you listen to them. You can only hear them in conventional mode.

But for the price, and no foreseeable future of Fort Worth going digital, I would go with the PRO-162. I looked at it the other day and it was a pretty neat scanner.

The 162 will do all the trunk systems except LTR Passport (Johnson County) and is not digital.

I've always liked Uniden scanners, but the BC-246 is too small for my taste.

Hope this sheds some light for you. I'm sure you will get plenty of replies on this.

Happy Scanning,

David, KC5RHB

P.S. And to the group, if I misled on any info stated above, please
feel free to correct me

29020. Re: PRO-162 Yes Or No and why.

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-22 05:57:03 UTC
From: hiegtx
Topic: 29015 Message: 29020

I own a BC246T, but not a Pro-162. From what I see here <http://wiki.radioreference.com/index.php/Pro-162> , the 162 is a Uniden manufactured scanner, sort of dumbed down for Radio Shack. While it's indicated to be rebanding supported, it also indicates as not computer controllable. It also does not have alpha tags. 1000 channels, ten banks.

A better choice, if you prefer dealing with Radio Shack, is the Pro-164 <http://wiki.radioreference.com/index.php/Pro-164> . This is basically a slightly revamped PSR-300, and is the follow on radio to the Pro-97. This is also rebanding supported, 1000 channels, ten banks, and, unlike the Pro-162, does have alpha tags. This allows you enter a text description of that specific frequency, or trunked system talkgroup, instead of trying to memorize all of them quickly. However, this scanner cannot be computer controlled either (programmed, yes, but not controlled for a logging/recording program as can be done with other scanners).

The PSR-300 is the same basic scanner, electronically, as the Pro-164. The main difference is that the keyboard & speaker placements are reversed. Rebanding supported, computer programmable but not controllable, has alpha tags. GRE makes the PSR-300 & the Pro-164.

The BC246T <http://wiki.radioreference.com/index.php/BC246T> is rebanding supported, small size. While it only has ten "quick keys", it's dynamic memory allows for up to 200 'systems', and 2500 channels. (A system can be a trunked radio system, such as Burleson's or Ft. Worth's, or a group of conventional frequencies, such as those used by agencies in Hood County.)

A better choice from Uniden, if you can find one, is the BR330T <http://wiki.radioreference.com/index.php/BR330T> . This is their now-discontinued "Nascar" scanner, but it's also a full featured analog trunk-tracker. Alpha tags, rebanding supported, Dynamic memory. 2500 channels/200 systems. However, this scanner has 100 quick-keys, making it easier to turn multiple systems on and off from the keypad while scanning. It also covers the mil-air band; the 246 does not.

Both the BC246T & the BR330T can be programmed via computer, and can be computer controlled. Both come with rechargeable batteries, the pc interface cable, antenna, and ac adapter. The two Radio Shack models come without a cable or ac adapter or batteries. The PSR-300 does not come with a cable, or batteries, but I have heard it may come with the ac adapter. Both the Pro-162 & Pro-164 show on Radio Shack's web page at $179.99. The PSR-300 is around $200, plus shipping, from a number of online dealers. The BC246T is around $200 as well, from online dealers.

The BR330T, being a discontinued model, can be hard to find. Uniden's web page <http://www.unidendirect.com/itemlist.cfm?cattype=prd&catid=3> currently (at time of writing) shows new ones at $239.99 <http://www.unidendirect.com/itemdetail.cfm?item=BR330T&tabid=1> . These pop up from time to time, dealer returns, whatever. Once they sell out, the item is removed until the next time stock is available.

Any of the listed scanners will cover Burleson & Fort Worth as they are presently. If Fort Worth ever makes a move to digital, as Parker County already has, then you'd need to upgrade to a digital scanner. (You'd need to consider that anyway, if you think you'll also want Parker County and/or Tx DPS.) From what I understand, the Burleson trunk system may be fairly weak, compaired to some of the other systems in the area. Of the 5 scanners, the 246 is one of the least sensitive. It's not deaf, by any means, with the proper antenna, but the 330 & the PSR-300/Pro-164 are more sensitive. As I prefer Uniden's dynamic memory, I'd look for a BR330T (I already have one, so I know it's capabilties.). If none were found, then I'd get the 246 or PSR-300.

Hi John & List,

Like many others have said, I've had no problems flying with gear either (not to say you can't have them though). I've only flown 4 times since 9/11, but I took multiple scanners, my laptop, data slicers (I wondered how this would turn out since they're home built electronics), and a full array of radio and electronic items. I one time had a TSA screener ask me to turn on the laptop to prove it worked. Since the battery wouldn't hold a charge, it would not come on. They said "OK" and sent me on my way. I've always carried all of these items on the plane with me and kept my primary handheld on my belt.

Let's just hope it never gets to where we cannot carry our electronics onboard. Now that I've "bragged" about what I've carried, I'll probably be the one you see lying on the floor with arms and legs spread out and guns pointed at me next time you try to fly :-)

Brian
Ft. Worth, TX

Subject: [dfwscan] Longtime scannist, infrequent flyer

Here's a question for the masses:

I haven't flown commercially since before 9/11.

Do YOU take your hand-helds with you when you fly these days?
Do you carry it in your laptop bag, or check it through if you do?

I can see where some over exuberant TSA officer might get the wrong idea about why you would have such a thing in an airport or on a plane...

I'd SOOOO rather be traveling on the Goldwing! Enjoy the flying part, but don't lood forward to the airport CRAP!

Thanks in advance....

John

29022. VHF-Hi Skip This AM

Yahoo group: dfwscan (2008 — 2009)

From: commscan
Topic: 29022 Message: 29022

I'm hearing some decent VHF-Hi skip/ducting this morning. I've been tracking down the user on 154.145/225.7 PL for a little while. I was able to confirm thru a location given (off FM 979), the FCC database, RR.com, and from listening that it is Robertson County Fire & EMS dispatch I'm hearing from NW Tarrant County. There are a lot of PL tones on numerous frequencies (i.e. 155.100 with 82.5/100.0/123.0) in the VHF-Hi band. I haven't checked any UHF out yet but I probably will.

Medic 3 is enroute to "St. Jo's" with their patient now on 154.145.

From: KC5RHB
Topic: 29015 Message: 29024

The PRO-162 does do alpha text and is PC programmable, and I thought it had a GRE board in it, oh well.

I was looking at the wrong scanner at Radio Shack. The one I was looking at was the PRO-164. At first I thought it was a PRO-97 and wondering why they were selling it for $219, and then I noticed the volume and squelch knobs were different, bigger now.

And the PRO-164 is showing to be on sale also, so if I were you Don I would snag that PRO-164. If its anything like the 97, real easy to use. Matter of fact, for $179, I might just go get one myself.

Thanks for the correction on the alpha tags, David. I overlooked that,
& presumed that since the Pro-162 would clone with the Pro-433, which
does not have tags, it did not either.

BC246T will be updated to support rebanded Motorola systems by the end of the year.

Subject: [dfwscan] Re: PRO-162 Yes Or No and why.

Don,

I too live in Burleson. The RS PRO-162 will do the rebanding but it
is not digital. The BC-246T will not do rebanding and is not digital.

Burleson will not be affected by the rebanding because they are on UHF
and they just recently got their new radio system. And I don't see
Burleson even going digital either, too much money involved.

The only city that would be affected by the rebanding would be Fort
Worth, and no telling how many years that will happen. And when Fort
Worth does reband, you can guarantee they will go digital.

The PRO-162 is on sale I believe and is flash programmable (rebanding)
when it does happen. But from what I understand, the rebanding will
affect Public Safety communications in the 800mhz area, and more than
likely those that do reband will probably go digital. So, I wouldn't
worry about the rebanding issue right now with a scanner unless you
get a digital one. Unless the flash programming will make it digital,
but I don't think it will. No reason to make a scanner capable of
rebanding if it's not digital capable.

If all you want to do is listen to Burleson and Fort Worth, and want
to save a little money, I would go with the PRO-162, or a GRE scanner,
which is a little more expensive.

But at this time there is no scanner out there that can trunk Johnson
County SO, that's if you listen to them. You can only hear them in
conventional mode.

But for the price, and no foreseeable future of Fort Worth going
digital, I would go with the PRO-162. I looked at it the other day
and it was a pretty neat scanner.

The 162 will do all the trunk systems except LTR Passport (Johnson
County) and is not digital.

I've always liked Uniden scanners, but the BC-246 is too small for my
taste.

Hope this sheds some light for you. I'm sure you will get plenty of
replies on this.

Happy Scanning,

David, KC5RHB

P.S. And to the group, if I misled on any info stated above, please
feel free to correct me

I hit SEND too soon. :)

Rebanding has nothing to do with switching to digital. In fact, since Sprint/Nextel is paying for the hardware changes needed for rebanding, it is very unlikely for rebanding to coincide with a switch to digital (since Sprint will only pay for comparable equipment...not for an upgrade).

Ok, I'm a little biased :) but the BR330T gets my vote for the best Analog Trunking scanner, ever (well, so far).

I just wish more people would have bought it so that it would have had a longer life.

I just snagged the BR330 from www.scannerworld. com

So far I am still getting it programmed and arranged, but I like what I see!

David,

The NPSPAC pdf came in handy. I noticed on the map that there is supposed to be a new "Primary Calling Channel Station with Tactical Channel" right here in Rockwall County, Channel 2. It was considered as "New" at the time the report was made, November 30, 2007. I see Hunt and Kaufman Counties are included.

From now on I am glued to the NPSPAC frequencies.

John,

Definitely take in in your carry-on bag. Items left in checked luggage have a way of "disappearing". I always carry-on my stuff and no questions are asked. It used to be you had to turn everything on to make sure it wouldn't detonate. I also carry-on charging cords and no questions asked.

For checked luggage, consider using those little TSA-approved locks with the indicator. If they are unlocked by the TSA with their key, it sets a little red flag that can only be cleared if the lock is opened with the combination or the real key.

If you want to see some really paranoid baggage screeners, go to Israel or the UK with some electronics. The love to play 20 questions.

My favorite violated luggage story was the guy who looked out the terminal window and saw one of the baggage handlers wearing an animal costume that looked just like the one he checked.

Thanks for all the reponses.. Public and personal.
I had a feeling they would run "positive", but wanted to get the
groups experience...

And no, I hadn't planned on actually turning one on in the airport or
on the plane! :)

Thanks again!
John

I never heard of the BR330T, I had to look it up, and the reason why I never heard of it because its a race scanner, and I had no idea it did trunk. Looks pretty neat, and according to the Uniden site you can still get it. That scanner still has the scanner look to it (nothing fancy).

And as for the rebanding thing, if Sprint/Nextel is taking care of equipment issues, that gives a city even more reason to spend city funds on digital, I guess. But the only city I listen too that would be affected by the rebanding (at this time) is Fort Worth. And no telling when that might be. Even with digital. Lots of city employees, police/fire, out there that are still using MTS2000's.

But when it happens, it happens. It's "when", is the big question.

Happy Scanning,

Sprint/Nextel is taking care of any equipment issues that arise from rebanding, but will not pay anything toward upgrading to digital. So, there is no financial advantage for a city to go to digital at the same time (i.e.they cannot apply the money they get from Sprint toward going digital...Sprint actually provides the replacement hardware, if needed, for rebanding...and that hardware is not digital capable).

Interesting. Sounds like a big headache to me. Whatever happened to
the good ole VHF/UHF days, when radios worked like they were supposed too.

Thanks Paul for the info.

From: commscan
Topic: 29015 Message: 29036

I also think that the BR330T was/is a great little scanner. I do not own one but had one for a short time that was being used for a review being written (not by me). It is the BCD396T without digital capabilities and with about half of the memory (2500 or 3500 "entries" I think) of the digital BCD396T (6500 "entries" I think).

Could it be the BR330T was not advertised or promoted very well? I know Uniden doesn't do too much scanner advertising, but I don't think I ever saw anything for the BR330T.

This little scanner also had the same features (like CloseCall) found on the more expensive scanners.

The BR330T also has some HF capabilities. Even though it isn't helpful for military or utility monitoring due to the lack of any USB/LSB options and the inability to tune in steps of less than 5 kHz, you could still listen to the broadcast stations like BBC, VOA, Radio Moscow, etc, etc. I know a few friends with a BR330T today and they've said that this little radio actually receives the HF broadcast stations pretty well.

I thought there was a comeback for the BR330T a few months ago, but judging from the e-mail I'm replying to, I guess I'm wrong. I wish I'd been able to get one while they were available. I remember the price was definitely right!

Brian

Ok, I'm a little biased :) but the BR330T gets my vote for the best Analog Trunking scanner, ever (well, so far).

I just wish more people would have bought it so that it would have had a longer life.

I just snagged the BR330 from www.scannerworld. com

So far I am still getting it programmed and arranged, but I like what I see!

I was wondering if anyone would be willing to help me put a discriminator tap in my pro-90?

Thank You
John

29039. Arlington PD South Patrol Channel?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-09-25 07:03:52 UTC
From: KC5RHB
Topic: 29039 Message: 29039

Ok, don't really listen to Arlington all that much so tonight I was scanning Arlington and on what was showing to be South Patrol (54064)didn't sound like PD traffic.

So I listened for a while, and it sounds like JAIL traffic. Hearing people talking about bonds, sounds like cell checks, and one person told another person to tell another person (inmate I guess) to step away from the door.

Does anyone have any input on this or is my scanner going crazy.

I checked RR and Ben's page on the ID and both are showing the same, APD South (54064).

And if Arlington did change, where the heck did South go?

Thanks,

David, KC5RHB

http://www.geocities.com/kc5rhb/weather

Hmmm. I can't remember where I got 54064 as being South, and I don't recall hearing traffic on it. I do remember it being "future South dispatch channel" whenever I put it in my database. I don't monitor PD much either. I'm wondering if it's hurricane shelter related?

Any Arlington PD folks on board with some info?

Thanks for pointing it out David.

Ben

From: KC5RHB
Topic: 29039 Message: 29041

That ID has been APD South Patrol for a long time. I went back and looked at all my templates from several years back. Last time I was listening to them is when I went to the new Wal-Mart off Little Rd. which was month's back. And the last time I listen to anything major on South Patrol was when they had that standoff where the car went into the lake.

Turned the scanner on this morning and put it back on that ID, same type of traffic. Sounds like Jail or security type communications, but I'm leaning towards Jail because sounds like they are doing "cell checks" and walk through's. And as I type this I'm hearing radio traffic about taking someone from booking back to C block. So, there you go.

Well, maybe we will find out soon.

Happy Scanning,

David, KC5RHB

I've heard that channel being used for multiple things...from talkaround-type traffic to event traffic. I agree that this morning it sounds like Jail/security ops...

South station construction is near completion on S Green Oaks. South patrol district has been set for a while...I'd expect a PD South Dispatch and TA to be set soon, if our current 54064 / 54224 are incorrect.

From: KC5RHB
Topic: 29039 Message: 29043

Well like I said, its been a while since I've listened to Arlington. The only time I listen to them is when I'm over there, or just plain bored in the middle of the night. But I know for a fact, long time ago, I would listen to South Patrol and South TA, and there was a dispatcher and units, espcially when I was over at Frys.

Now, everyone keeps talking about a new "South Station" being built. You can still have a "South Patrol" without having a "South Station".

Maybe Arlington had a budget cutback and pulled the South Patrol dispatcher, kind of what FW did when they were trying out having a traffic dispatcher.

But I know I'm not going crazy, APD South (54064) used to be active with a dispatcher. Ok, wheres those e-trunker folks to straighten this mess out, haha.

You never know what will change in a TRS. Just like that time I was hearing the Courtesy Patrol on one of the TCSO channels.

Ok, well that ID (54064) has been L/O for now. Dont really want to hear jail operations.

Happy Scanning,

David, KC5RHB

Hearing loss prevention doing surveillance
on possible shoplifters in a department store.

Talk of a women taking a bra and some man
taking a tie or something in the mens department.

Funny thing is, I have this as Home Depot
CH 2. Now there IS a Home Depot right
down the street from me, but they DON'T
have bras (unless its the Billy Mays industrial
strength model!). And they have cable ties -
but not dress ties!

Now I DO also have a Kohl's within walking
distance, so I'm thinking this may be them.

If not, could be Target. They are fairly close
by too. But the transmissions were loud.

Blaine,

It must be Kohls because the French, who own Target, don't wear bras!

Closes one to Tarrant I believe is the WPQY525 repeater in
Duncanville. It's on 462.550 (100.0 or 141.3) tone, open repeater
only to licensed GMRS operators, Ham license not valid to operate on a
GMRS repeater. Thats why I love being a Ham!!!

But thats the only GMRS repeater I know thats close. You can hear it
from south and west Fort Worth. Its running at about 30 watts.

I don't believe GMRS repeaters are that big in Texas. I know in
Colorado they actually have GMRS clubs up there and tons of repeaters
scattered all over, especially in the mountains where there were not
many ham repeaters.

Hope that helps,

73,

David, KC5RHB

29053. Duncanville going to new band?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-02 17:45:00 UTC
From: duncanville1
Topic: 29053 Message: 29053

I have noticed all Duncanville police vehicles have sprung a new loaded antenna on the trunk. In response I ask a few friends over at the PD who advised that the department is going to 800mhz and the new mobile rigs are already installed just not active yet, i am guessing regional dispatch dosnt have the new repeaters installed. Anyone have any idea of the details on the new system? Also i wonder if the other two regional dispatch system users will follow? I cannot believe they are going to dump their VHF systems but nothing really surprises me.

29055. Fw: Re: [dfwscan] Dallas 911 Center

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-02 18:51:22 UTC
From: Dale Aymond
Topic: 29055 Message: 29055

As for the Fire Department nothing really changes. If you call 911 and tell them your house is on fire or you need an ambulance your call is forwarded to the fire dispatch.

Then actual fire fighters take the information from you and send the equipment. If you phone 911 and tell you have been involved in a major accident, the 911 operator takes the info and the request for fire personnel is sent over by computer to the fire department for dispatching.

The 911 operators are in a room right next to the police dispatchers and 40 feet from there is a room with the fire dispatchers.

Although the police are going to make a few changes in procedures everything it more or less staying the same. The 911 center will now be in the police departments budget and under their command. I think the fire department is happy to give it up.

Dale

Here's the press release:

The City of Dallas 911 Call-Center has operated under the able management of the Dallas Fire and Rescue Department for the past 14 years. Beginning Wednesday October 1, 2008, the 911 Call-Center and Administration will be transitioned to the Dallas Police Department. This transition will continue the long-standing positive relationship between 911 and the Police Department and will allow us to be even more responsive to the officers in the field and the citizens we all serve. The Dallas Police Communications Section and 911 Call-Center will continue to work closely with the Dallas Fire and Rescue Communications division to ensure seamless delivery of service for all public safety emergencies. For all other non-public safety emergencies and information, citizens should continue to call 311

This is a very good question, and one
that has been asked every year on this
list since I moved down here in '98. Problem
is, I have yet to see in 10 years time an accurate
and complete list of all the frequencies that are
used. Granted, it might be a bunch of mindless
chit chat among food vendors, but still, it would
be fun and interesting to get some confirmations.
I would say most of the stuff would be business
band itinerant or FRS, but, who knows? I do
know DPD command is on CH12 (460.400) but
honestly, that's about all I know.

Perhaps with the new signal stalker and close call
scanners, we can get more info.

From: cltx11
Topic: 29060 Message: 29060

Just a heads up for the group, NRH Public Safety Expo is going to be help October 11, 2008 from 10:00 - 16:00. The Quad Cities will be there in attendance plus others.

It is going to be located at NRH20 in North Richland Hills @ 9001 Blvd 26. Parking will be across the street @ TTC NE campus.

Events etc that will be there:

Over 30 fire apparatus's plus the Dallas fire museum will be bringing some of there vintage fire rigs.

Motorcycle PD will have a course set up to demo their riding skills as some might have seen them in the Birdville Complex practicing. They have won worldwide competitions and most place in the top 3. The last competition the attended was last year in Australia.

FD will be doing demos on rappelling from the Green Extreme (Ride). Also they will be doing demos on water rescues (no swift water though)

FD is going to demo how they cut through cars for extrication etc...

FEMA will have here command centers set up, I think 2 of them.

Texas Auto Theft Task Force will be there doing demos.

For the kids, that I know of, there will be a course set up for bicycle riding, after watching the motorcycle's of course. Some kind of walk through exhibit with extras.

Everything will be located @ the waterpark including inside & in the field to the rear of the park.

Hope ya'll get the idea, I am typing them as they pop in my head. I am going to try and attend early as I have plans that afternoon. If you are going to be there shoot me a message and maybe we can run into each other.

Cody

29061. Interference on DFR Hospital Channels

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-02 21:45:14 UTC
From: Andrew Tucker
Topic: 29061 Message: 29061

For some reason on 463.000 & 463.025 there is some very bad interference whenever any Rescue transmits to Biotel. It is a high-pitched beep and some static that repeats every second. I have heard this from Rescues 5, 38, 37, 49 and 30 so far. I have not heard it when any helicopters are coming in, so it has to be the department radios. Biotel is constantly having to ask for repeated information or advising units to call in on the cell phone. Is there a new piece of equipment being carried that is interfering with these calls?

Hey Blaine, wake up!!! Your multi-tasking again, lol. He was asking about DPD.

I believe they will be on Ch.12 (460.400) and sometimes on the simplex channel. But like Blaine was saying, if you want to listen to the staff, vendors, parking security, ect. I'm sure they will be using FRS or Business "dot" radios (UHF), just search in that band and "you shall find".

Happy Scanning,

David, KC5RHB

There's definitely nothing more exciting than hearing where they need more hotdogs, or what toilets are stopped up... gotta plan in advance and all.

If you really want to find such nonsense, take a spectrum analyzer. You'll likely find stuff on MURS, FRS, GMRS, itinerants, biz band, as well as a whole host of illegal users on unauthorized channels. Wouldn't surprised me to see some 900MHz FHSS going on too.

I was doing a quick scan through the federal band while on a smoke break outside while I am at work came up with two data like signals, one on
168.7125 and the other on 168.8125. The data signal sounds just like white static noise. This is the first time I have heard them so I was intrigued to find out what they were. Well when I did a little search on google it looks like they are some type of data rebroadcasting service for the NOAA. The 168.7125 is out of Denton and the 168.8125 is out of Mesquite, both using 100 watts of power using a baud rate of 1200,8,n,1.

EMWIN, yea..

The Denton ham radio club hosts an EMWIN transmitter up at TWU as well.

Yep, thats EMWIN. I've been using EMWIN for a long time before I went to an air card. I still use it every now and then when I'm in an area that I cant get an air card siganl but can still pick up an EMWIN signal, espceialy in Oklahoma. But its real easy to setup. If you do the radio way, you can use a scanner, demodulator, and get the EMWIN software and your ready to go. You can also stream the signal from the internet too, and satellite. I'm sure you read what it can do, but its a good reliable source of info when all else fails.

From: Tracey W. Singleton
Topic: 29068 Message: 29068

Hi folks, just a heads up..POTUS is headed to Waco tonight and the FAA has established a TFR (as usual) for the time period of 8:20pm - 9:25pm tonight.

If you want to maybe catch a listen for AF1 you might keep these in the scanner:

FTW Center 269.5, 133.3
Waco Approach 135.2
TSTC Tower 255.7, 124.0

Our good buddy Blaine might have some other Mil/Air freqs to add. These would be a good starting place. CAP Freqs anyone??

Enjoy.

Tracey

271.0 was the primary last time I heard
anything from that area, which has been
a long time.

From: Bob Stewart
Topic: 29070 Message: 29070

I'm going to the MusicArte de Fort Worth latin festival in downtown Fort Worth Friday and Saturday.
http://www.musicartefw.com/Default.aspx

I was hoping to listen to some of the wireless mics on some musical instruments and singers in the performing groups.

My files show these extra large ranges of frequencies:
169-216 MHz
519-865
902-927

Can anyone narrow that down a bit?

I run sound for my church and we use several Shure ULX wireless mics
for vocals and instruments.

Here is a link to the Shure site:
http://www.shure.com/ProAudio/Products/WirelessMicrophones/us_pro_ULXP_content

The two supplement guides M1 and J1 each have the North American
frequencies for the Shure system.

I would guess if you loaded those in your scanner you could pick some
stuff. Shure is one of the most popular brands for the pros and not
quite pros. So you should get a few hits.

Also, they may use a Williams Sound Wireless system for the hearing
impaired. Those frequencies are 72.1, 72.3, 72.5, 72.7, 72.9, 75.5,
75.7 and 75.9. Most will deafult to 72.9 I think.

Dale

From the chief's weekly update:

SUPPORT SERVICES

The maintenance checks on our portable
radios were completed last week. Ninety-five
portables were serviced over a two day period.
The technicians fixed frequency drift, reset squelch,
adjusted receiver sensitivity and a few other things
onsite. If they could not fix it onsite, we have made
arrangements to have them repaired at DFW
Communications or Motorola shops.

Fifty-eight of the 95 radios were operating within
normal capacity. Twenty-four radios require off-site
repair. (Ten were sent now and another 14 will be
sent to the shops as we recover some of our spares.)

Issues that affected the quality of the radio
transmissions include:

19 radios were significantly off frequency
4 had their squelch adjusted
4 had an output power of less than 2 watts
3 had low receiver sensitivity
2 had low deviation readings

It looks like there's some FCC license activity on D/FW Airport's
frequencies for rebanding.

http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=1301201

I'm not sure what going on with the frequencies below. Maybe fixing some bad
data, but one of the adds, 868.5225, doesn't look right.

"RELOCATE B, DELETE 866.5875 & 868.7125. ADD 868.5225, 868.6625 & 868.8125.
[GE] "

Hey Folks,

I'm not sure how common the Russian AH 124-100 (huge cargo plane) is, but I just noticed one sitting on the tarmac on the west side of D/FW in the International Cargo area off of 23rd street. I couldn't make out a tail number anywhere to research, but poking around on FlightAware.com I see where VDA2528 arrived Saturday, so I bet that's the one.

I can't remember if it was in Portland or Seattle that I saw one land.
When I researched it, I learned that our govt has a contract with a
Russian firm to transport large and heavy parts for govt projects
using the Antonov AH-124-100. Not sure what projects, but my guess is
that's the reason the big beast was in town.

They certainly are a sight to see!

My thanks to Tom and Dale for the updated sources for wireless mic frequencies. Unfortunately, all the performing groups used hard wires to their instruments, so I was not able to scan them. But that wasn't the worst part.

We had free front row seats to the Tito Puente Jr group.
As soon as the music started, about 30 people flooded in and stood directly in front of our seats. By directly I mean that our faces were 2 feet from a wall of posteriors, and we had to fight to find solid ground for our shoes.

A number of us seated asked them to move and they ignored us.
I talked to 2 FWPD working part time for the festival, and they absolutely refused to lift a finger. I talked to the top person of the festival, and she was outraged both at the people and at FWPD.

By that time, not only was I outraged, but I was also very enraged at the injustices, and at those who refused to correct the injustices.
We were no longer able to enjoy the music so we left......
I'm still angry.

From: Ed C.
Topic: 29060 Message: 29085

Any luck with the LCN order?
If you have a good list, could you post please?

Thanks

Please ignore the attached SPAM - I have no control over it.

From: groups@bensware.com
Topic: 29060 Message: 29086

I kept them in the same order. Everything is just 15Mhz lower, and on the way to work I happen to catch the morning apparatus roll call on decimal tg 289. Of course, with the way they have it setup, you can only hear the dispatcher side, just like before, but it seems the LCN is the same, just 15Mhz lower on the frequencies. By the way, that was heard on my Uniden 396T after the latest firmware update that allows you to hear EDACS ESK systems(Thanks Paul!), not Provoice though.

Ben

29087. FWFD Dispatch

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-08 22:39:16 UTC
From: cltx11
Topic: 27098 Message: 29087

Listening in on FWFD today and it sounds like they have shortened their "dispatching."

They are not repeating the address in individual numbers or giving a Mapsco number anymore. Other than not catching the address the first time I like it. It will cut down on the time from hearing the other channels. I wonder if it is something they plan on doing from now on or just testing it out, any ideas?

29088. KDFW ENG?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-10 16:22:52 UTC
From: Blaine Brooks
Topic: 29088 Message: 29088

What's up with the KDFW (Fox 4) UHF ENG channel
primary 450.3125 (131.8)??

Sounds like a MPT-1327 data stream this morning.

Annoying.....Had to lock them out.....Skip?

Blaine

29089. DCSO Tac 2

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-10 16:47:14 UTC
From: Blaine Brooks
Topic: 26179 Message: 29089

Sounds like DCSO Warrants is serving some arrests or possibly a SWAT op this morning. Good listening on TAC2, for those that have the day off....like me....:)

Blaine

29090. UTA incident

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-10 17:59:56 UTC
From: groups@bensware.com
Topic: 29090 Message: 29090

Arlington FD is working something at UTA on West 3rd@Planetarium. Canceled most of the alarm assignment, but are keeping the medic for one victim, and requesting an investigator.

Ben

29091. DENTON PD question

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-12 02:20:37 UTC
From: David Bailey
Topic: 29091 Message: 29091

I'm having a problem receiving Denton PD. I have programmed using the primary frequencies on RadioReference but I still can't receive anything. I get Denton County SO just fine.

Here are the frequencies I'm usig:

857.31250c 858.31250c 858.58750 859.31250c 860.31250c

I've also programed the workgroups.

Are there any tricky settings I'm missing?

Thanks!

David

29092. Mobile Antenna

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-12 02:46:55 UTC
From: jared4301
Topic: 29092 Message: 29092

I have been looking for a magnetic mobile mount antenna and I am having trouble deciding with so many choices out there. I will mainly be listening to 800MHZ (Fort Worth Trunking), UHF (400 MHZ), and some VHF (150 MHZ). I would like to have the ability to use it inside my residence, but I could do without that. I do not want to spend too much money. I would prefer not to spend over $60.00. Thanks in advance for all of the help.

29093. RE: [dfwscan] Mobile Antenna

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-12 03:21:03 UTC
From: Terry
Topic: 29092 Message: 29093

Jared, 2 antennas come to mind. They links are included. Both list for +/- $35 without mount. It's a standard NMO which you should have no problem in finding a mag mount that works. Might push past $60 by a bit if you want a mag mount. You might consider a trunk lip or L bracket provided you don't want to drill a hole. It would save you a few dollars. A good place to look at stuff on-line is:

www.tessco.com

Not sure what their policies are on selling to the public at list etc but they do have a great selection all in one place.

http://www.larsen-antennas.com/docfiles/ASB9/Mobile/MultibandVHFUHF.pdf

NMO150/450/800

http://wildcard.pctel.com/images_catalog_group/pdf_docs/2008MOBILE-FINAL.pdf

page 22 (B)maxscan1000 (note "B" means black)

Good luck!

Terry

29094. RE: [dfwscan] DENTON PD question

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-12 03:26:02 UTC
From: Terry
Topic: 29091 Message: 29094

I assume you're radio only requires the control channels? If so the 4 channels are:

857.3125
858.3125
859.3125
860.3125

Only suggestion I can make with data provided. Obviously if you need all the frequencies they are in the table on the radioreference site:

http://www.radioreference.com/apps/db/?sid=22

Terry

857.31250c 858.31250c 858.58750 859.31250c 860.31250c

I've also programed the workgroups.

Are there any tricky settings I'm missing?

Thanks!

David

From: KC5RHB
Topic: 29092 Message: 29098

What part of Benbrook are you in? If you live in North Benbrook by 183 (Southwest Blvd), there is a cell tower there that tears up 800Mhz(I used to live there). South and West Benbrook are ok for 800Mhz. And I guess I didn't understand the original question, are you needing an antenna for mobile, base or both?

And you mentioned VHF, and UHF. If they are local repeaters you really won't need too much in an antenna. You being a ham, sometimes you can use any type of antenna if it's local. For example, I use a 800Mhz 1/2 wave antenna by Cushcraft (cuz its low profile), kind of like the old FWPD antennas with the coil in the middle, primarily for 800 trunk listening, but it picks up VHF and UHF with no problem, several counties away, and its not really tuned for VHF UHF.

But there are a lot of antennas out there to choose from, or even make one. Heck, even the Radio Shack mobile scanner antenna would work
http://www.radioshack.com/product/index.jsp?productId=2102469&cp=2032052.2032075.2032078.2032098&parentPage=family
But like you said you have a budget, which I understand, and I'm sure you can get something fairly cheap, or even build one out of stuff, you just need to find a magnet base if that's what you are wanting.

Hope this helps and good luck, 73,

David, KC5RHB

Hey, there's millions of dollars worth of computers deciding on the closet unit! 2 female inspectors were EB on Gannon and were broadsided by a Ford Expedition that was SB on Westmoreland. After being hit they continued across the intersection and into a field. Firefighters had to pop a door to get the driver out. Both are very lucky. They were in an old retired chief car (Suburban). Impact was square in the B pillar. Had they been in a car the driver might not have survived. Never heard the condition of the SUV driver but it was a nice square hit so likely not serious.

I thought the Thunderbirds show was less impressive than in years past. This was the first year I recall the crowd leaving in droves in the middle of the performance.

Something I had not seen in previous Thunderbird shows was Thunderbirds 1-4 landing while #5 & #6 continued to fly above the field. Seems #5 had an indication that her gear was not down. #6 must have been giving her a visual. It was down, she landed fine, and then the light cleared before she reached the end of the runway.

LOL! I wish I could have taped that. That's hilarious! Must have been a tired, lazy, confused, or new dispatcher, because most of the time they jump on those requests, and even ask on the air if anyone can beat another unit. Maybe one of the inspectors was married to someone on R-25, and they were trying to keep him away.

Speaking of new dispatchers, there was a new (at least to me) female dispatcher on DFD the other night that was loud and annoying. I don't listen to Dallas much though, since so many have it well covered.

Heard an interesting EMS call dispatched in Arlington last night:

"Medic 3, priority 3 to ****** nursing centre on an 88 year old female who states she has fallen, and cannot get anyone on the staff to help her."

God, don't ever let me end up in a nursing home!

29116. Alliance Airshow Fort Worth...Thunderbirds Sunday, 12 Oct 2008

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-15 00:58:59 UTC
From: Paul Baumgardner
Topic: 29116 Message: 29116

The USAF Thunderbirds performed in a slightly cloud covered deck yesterday at the Alliance AirShow in Fort Worth, Texas.

The number 4 aircraft was a spare two seater.

Ground: 413.275
            413.325

Engine Start: 235.25

Diamond: 139.225
Solo's: 322.95

Airboss for the rest of the show: 120.825

There was a USAF Heritage Flight with the East Coast F-15C Demo and a P-40 Warhawk and a USN Heritage Flight with an F/A-18F and an F8F Bearcat.

Some of the show was:

E-6A AWACS
B-52
CF-18
F/A-18s from VMFA-112
F-16s from California and local 457th TFS
A-10
AH-1W
AH-64A
AH-64D
C-130H
American 767 painted with the Komen Pink Ribbon
American Eagle Embrarer EJ45 painted with the Komen Pink Ribbon (there is also a 757 with a Ribbon)
F-35 Mock Up from Lockheed
Many Bell Helicopters...Jet Rangers with 2 and 4 blades plus a Bell 47G
Ross Perot Jr's T38 in Tbird Markings
FEDEX A300

Anyone hear anything different?

Topic: 29119 Message: 29120

Jerry,

Having worked for Sprint, and Cingular (now ATT) for past 11 years there is really nothing out there as in an external antenna for today's and yesterdays CDMA, GSM, type handsets.

Back when I worked with Cingular (2006) the only thing Cingular offered in an external antenna was for their GSM Edge Data Cards, for those customers who lived in the fringe area. It was an external antenna with an amplifier, which all together cost about $400.

That didn't last long.

Now there are many different types of after market type antennas for the data cards, some with GPS capabilities.

The reason why there are no external antennas made for today's handsets is simply because there are so many towers within a certain geographical area that the handset simply doesn't need one.

If you were in a "no service" area, well, that was it. All the carriers really didn't care.

Back in the 80's and 90's when cell phones ran on the old 800 analog spectrum, there were not many towers. So the real "mobile phones" and "bag phones" had an RF "N" connector to which a customer could attach an external antenna to get a better signal. Plus those phones ran about 3 watts, compared to today's .5 watt handsets.

But today's handsets simply don't need them due to the number of towers, the switch to digital, and the new 3G network (ATT). There are no manufactures out there that make one.

There are so called "antenna booster" or amplifiers that supposedly will bring in a CDMA or GSM signal, not IDEN (Nextel) and send it to your phone, like a repeater, but those are several hundreds of dollars and work best in a "stationary" location.

If you know anything about internal modification of today's handsets, I'm sure you could make a connector for that handset to go to a matching RF type antenna, but to be honest, if your in a coverage area, its not going to make all that much difference.

Like I said the external antennas that were out on the market were for data cards, and that was mostly with Cingular.

In all the years I worked for Sprint, they never even had an external antenna for the CDMA system. They really didn't need one.

So I hope this information helps. I've got out of the
Telecommunication field several years ago. And even in that time,
"cell phone" technology has changed dramatically.

I worked for Sprint when they first started in 1996, then they had
only one handset, the Sony 600, and back then, well, we though that
was the coolest handset, at the time.

Good Luck on your search. I forgot to ask what the external antenna
purpose was for, mobile, stationary, if you were in a coverage area,
or fringe area, or inside a building that blocks certain cell signals
(Wal-Mart)?

Hope you find a resolution,

David, KC5RHB

One would assume that, if the OP is asking about an external antenna, he likely actually needs one. I know there are several places I don't get coverage from AT&T's network. I run a dual-band bidirectional amplifier and external antenna in the truck to get better coverage out of my Aircard. Unfortunately, the CDM8900 has no external antenna connector. Wilson builds a cradle which couples to the RF transmitted by the phone and allows the connection of an external antenna - usually through one of their dual-band amps. The kit is about $250.

Furthermore, Motorola makes a whole line of in-vehicle and bag phones just like the "good ol' days" for iDEN, CDMA, and GSM. Check out the Moto M-series phones.

Subject: [dfwscan] Re: OT: Cellphone antenna adapter

Jerry,

Having worked for Sprint, and Cingular (now ATT) for past 11 years there is really nothing out there as in an external antenna for today's and yesterdays CDMA, GSM, type handsets.

Back when I worked with Cingular (2006) the only thing Cingular offered in an external antenna was for their GSM Edge Data Cards, for those customers who lived in the fringe area. It was an external antenna with an amplifier, which all together cost about $400.

That didn't last long.

Now there are many different types of after market type antennas for the data cards, some with GPS capabilities.

The reason why there are no external antennas made for today's handsets is simply because there are so many towers within a certain geographical area that the handset simply doesn't need one.

If you were in a "no service" area, well, that was it. All the carriers really didn't care.

Back in the 80's and 90's when cell phones ran on the old 800 analog spectrum, there were not many towers. So the real "mobile phones" and "bag phones" had an RF "N" connector to which a customer could attach an external antenna to get a better signal. Plus those phones ran about 3 watts, compared to today's .5 watt handsets.

But today's handsets simply don't need them due to the number of towers, the switch to digital, and the new 3G network (ATT). There are no manufactures out there that make one.

There are so called "antenna booster" or amplifiers that supposedly will bring in a CDMA or GSM signal, not IDEN (Nextel) and send it to your phone, like a repeater, but those are several hundreds of dollars and work best in a "stationary" location.

If you know anything about internal modification of today's handsets, I'm sure you could make a connector for that handset to go to a matching RF type antenna, but to be honest, if your in a coverage area, its not going to make all that much difference.

Like I said the external antennas that were out on the market were for data cards, and that was mostly with Cingular.

In all the years I worked for Sprint, they never even had an external antenna for the CDMA system. They really didn't need one.

So I hope this information helps. I've got out of the Telecommunication field several years ago. And even in that time, "cell phone" technology has changed dramatically.

I worked for Sprint when they first started in 1996, then they had only one handset, the Sony 600, and back then, well, we though that was the coolest handset, at the time.

Good Luck on your search. I forgot to ask what the external antenna purpose was for, mobile, stationary, if you were in a coverage area, or fringe area, or inside a building that blocks certain cell signals (Wal-Mart)?

Hope you find a resolution,

David, KC5RHB

Hearing Rescue 46 give Biotel a pt report, and someone up in Greenville is also giving a pt report on the same freq. Both are coming loud & clear and it is rather amusing to hear conflicting reports.

The best one was "We're enroute to Methodist with an approximately 80 year old male....*Cuts Out* ...who is not pregnant."

Im at Frankford & Dallas N Tollway w/ a Pro-95 and its standard antenna. Im amazed that they can use this freq so close into Dallas. I have a friend that works for AMR up in Greenville and he says their pt reports are always getting walked on by Dallas Medics.

Depending upon propagation, it can get even worse. When I was in Dallas in the 80's, our Biotel comms would occasionally get walked on by Houston Fire Department!

The only site I can hear from my house is the Ellis County/Waxahachie
location. I have Waxahachie PD/FD programmed, and they were still on
the old channels last I noticed, Friday 10/17. Haven't heard any
comments 'unit xxx report to the radio shop.......', but would likely
be during the business day, when I'm usually not listening, unless I
have a day off.

I'll create a new system & leave a scanner running, set to log/record
on the pc while I'm at work for the next week or two, and see if it it
shows up yet. If not, then I'll check it periodically until it does,
and I can verify the new control(s).

If you haven't noticed North Richland Hills just started their bicycle patrol last week.

I talked with one of the guys today, I am not sure how many districts they have total but his district was 7. He patrols Birdville HS, Walker Creek Elementary, NRH Library & NRH2O along with all the business within that area.

They are riding Trek's outfitted with handlebar strobes & a siren along with their saddle pack on the rear equipped with a battery and their nice citation book. They been planning the bicycle patrol for over a year but as with all bids it took some time.

They wear different uniforms, a blue over black shirt with black cargo shorts.

They seem to enjoy it quite a bit, they like the stealth factor. He also stated that they will also get calls that they would have to respond in their patrol vehicles. Their Impalas do have the bike rack on the rear for a quick lock and go. They are ordering racks for their Subarbans, as of now they are just throwing them in the rear of the SUV.

Just a heads up for your guys when in the area, something different for the city.

And, I thank them for their business. <G> Most of the suburbs are using them for spot patrolling of apartments, parks, football games etc as needed.. Fort Worth has their downtown bike patrol that's full time on the bikes as well as some NPOs. It's been a while, since I monitored them, but they use to use N-FOOT as their channel. DFW Airport also has a dedicated bike unit.

Did anyone in the group hear anything about this MVA on scanners early this morning? I am just wondering because I was on scene of this MVA and it was not pretty. Fully involved car fire, mangled frame, looked like a nasty NASCAR wreck on the track. If anyone was listening this morning during this time, I would like to know what was said. I would also like to keep this in private fourm as the accident is still under investigation. Thank you in advance group.

To me sounded pretty routine. Major accident with a car fire. Sgt was going a good job of ordering resources like TxDOT to shut down freeway, CRASH Team etc. I thought it was interesting the FD rolled a mass casualty unit but maybe that's standard for a freeway crash in Euless. PHI went on standby early on and then of course was disregarded. It was very obvious this was a serious incident but folks were calm and professional both on the radio and at the scene.

Good point. It turned in front on me and was running hot so I took notice. By the time I parked and got up the embankment there was a truck west of the scene about the same shape with very nice lights. That makes more sense. Never can tell, nowadays departments roll some unusual stuff to justify their existence but they needed the lighting out there.

Salute!!!

Luke AFB is west of Phoenix and is rapidly being surrounded by civilization that complains about the noise from the base and its
planes, forgetting that it was there long before they were.

A certain lieutenant colonel at Luke AFB deserves a big pat on the back.

Apparently, an individual who lives somewhere near Luke AFB wrote the local paper complaining about a group of F-16s that disturbed his/her day at the mall.

When that individual read the response from a Luke AFB officer, it must have stung quite a bit.

The complaint:

"Question of the day for Luke Air Force Base:
Whom do we thank for the morning air show? Last Wednesday, at precisely 9:11 A.M, a tight formation of four F-16 jets made a low pass over Arrowhead Mall, continuing west over Bell Road at approximately 500 feet. Imagine our good fortune! Do the
Tom Cruise-wannabes feel we need this wake-up call, or were they trying to impress the cashiers at Mervyn's early bird special?
Any response would be appreciated."

The response:

Regarding "A wake-up call from Luke's jets" On June 15:

At precisely 9:12 a.m., a perfectly timed four- ship fly by of F-16s from the 63rd Fighter Squadron at Luke Air Force Base flew over the grave of Capt. Jeremy Fresques. Capt Fresques was an Air Force officer who was previously stationed at Luke Air Force Base and was killed in Iraq on May 30, Memorial Day.

At 9 a. m. on June 15, his family and friends gathered at Sunland Memorial Park in Sun City to mourn t he loss of a husband, son and friend.

Based on the letter writer's recount of the fly by, and because of the jet noise, I'm sure you didn't hear the 21-gun salute, the playing of taps, or my words to the widow and parents of Capt. Fresques as I gave them their son's flag on behalf of the President of the United States and all those veterans and servicemen and women who understand the sacrifices they have endured.

A four-ship fly by is a display of respect the Air Force gives to those who give their lives in defense of freedom.

We are professional aviators and take our jobs seriously, and on June 15 what the letter writer witnessed was four officers lining up to pay their ultimate respects.

The letter writer asks, 'Whom do we thank for the morning air show? The 56th Fighter Wing will make the call for you, and forward your thanks to the widow and parents of Capt Fresques, and thank them for you, for it was in their honor that my pilots flew the most honorable formation of their lives.

Only 2 defining forces have ever offered to die for you.....Jesus Christ and the American Soldier.

One died for your soul, the other for your freedom.

Lt. Col. Grant L. Rosensteel, Jr. , USAF

The old Sarge asks you to forgive this OT post.

From: KC5RHB
Topic: 29142 Message: 29145

Of course, a Storm Spotter and a Storm Chaser play different roles,
but when it comes to severe weather forecasting, its all the same.

If you have never read forecast models before, the first thing you
need to do is educate yourself on reading them and understanding what
things mean, or you will get lost and not know what you are doing.
Good example is reading a SKEW-T (sounding map, upper air). You can
go to all these "storm chaser" pages and read all the data you want,
but understanding them is the key. But once you learn how to read
this data, which is pretty easy, you could pretty much make your own
"short term forecast" for areas that might be a severe weather potential.

Below are some links of weather sites that will help you understand
what some models mean, what they do, and how to read them. It will
take some time, but easy once you learn.

http://www.spc.noaa.gov/exper/ (SPC Forecast tools)
http://www.srh.noaa.gov/oun/severewx/glossary.php (SPC definitions)
http://weather.unisys.com/index.html (UNISYS Weather)
http://weather.cod.edu/ (College of DuPage)
http://www.ral.ucar.edu/weather/ (NCAR Weather)
http://www.srh.noaa.gov/fwd/Convective/convect.html
http://www.geocities.com/kc5rhb/weather_data (My weather data page)

There are many more sites and information out there. If you have any
questions feel free to contact off line.

David, KC5RHB

David, GREAT INFO !!!

Next month I will take my technician test and hope to be on 2 meters soon after.

I don't expect to be a storm chaser, just want to be on top of storms that are headed for Lickskillet.

Thanks, Again, Sarge

I don't think it is.

I noticed something in the area on Monday morning. I work around the Beltline/Luna road and know where the airport is in relation to my job. Whatever it was, wasn't from the airport.

29152. Need monitor hookup advice please

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-10-29 13:53:57 UTC
From: Sarge
Topic: 29152 Message: 29152

I apologize for this off topic post. I have nowhere to turn for an Honest answer.

I have a chance to get a new high zoot Dell 24 inch LCD digital and analog color monitor. Can I hook this monitor to my Direct TV digital receiver? This monitor has no coax input connector. It does have a S video connector and so does the DTV receiver. I have no knowledge of S video.

I use a home theater for my sound. Is S video " plug and play "?

Thanks again, Sarge

From: rob.davis@armynursecorps.com
Topic: 29155 Message: 29155

Do any of our Johnson County friends have an update for us on what's happening with the new fire radio system? As of yesterday, I am hearing 46.06/155.295 (as well as Alvarado 153.89) simulcasted on the Cleburne FD channel, 154.145.

Is this a trunked thing, or conventional? Is it intended to be permanent, or are they still experimenting? This is starting to really confuse me.

Topic: 29155 Message: 29156

Rob & Group,

Here's what I know. A while back someone on the Texas forum on RadioReference PM'd me and said that he had heard that Johnson County was going to give the Passport system back to DFW Communications.

As far as I know all public safety entities in the county are no longer using the Passport system. Johnson County SO was the last user on the system, but they have had their radios re-programmed and are now using 158.745 & 155.6625 in conventional mode. And of course Keene FD & Alvarado FD are using their freqs in conventional mode as well.

154.145 is no longer Cleburne FD. They are on 155.145 PL 67

After hearing Rob mention simulcasting on 154.145 I plugged it back into my scanner and heard Venus FD working a fire call in their district. Nice to be able to hear the FD side of the conversation and not just the dispatcher. Which is about all you get on 46.100.

I bet JoCo is using 154.145 as a 'cross-band' repeater. Much like they do with 158.8425 (Grandview) 155.295 (Venus) and 154.310 (Lillian). I'm not hearing any data blips, so that tells me it's being used in conventional mode and not part of the Passport system. Which hopefully is gone from JoCo for EVER. There is no PL tone on 154.145 however.

Rob, thanks for the info on 154.145. I guess I should have just left that one in my scanner to begin with. Should make listening to JoCo fire a lot more interesting.

Chris

Well, I could hear Cleburne FD loud and clear here in Arlington when they were on 154.145. I'm hoping those days are not over and done with. I guess I'll find out - or not - today.

I would bet money that whoever set up that repeater on 154.145 is the same one who set up Duncanville-De Soto-Cedar Hill's repeaters. They both have that horribly hot audio that makes everything difficult to understand, and creates a loud, roaring sound in the background. I hope this is not a trend.

And yes, I definitely hear the banjos playing!

From: Paul Opitz
Topic: 29162 Message: 29162

I finally got tired of the misidentified TGID 54064 on the Arlington systems coming up as South Patrol so changed RadioReference database to show this as "Arlington PD Jail Operations."

Since I haven't been able to identify (or hear) any traffic on 54224, I left it as deleted when I removed the SouthPatrol subgroup.

Two questions:

1) Anyone know where South Patrol will end up (TGID-wise)? Their substation looks pretty close to operational.
2) Anyone know what the actual use of 54224 is?

From: rob.davis@armynursecorps.com
Topic: 29163 Message: 29163

There are a couple of frequencies that I keep getting anonymous references to "post 60" on.

On both 154.400 (Glenn Heights and Balch Springs FD) and 155.490 (Seagoville FD), I hear a base station transmitting a two-tone encoder, then sending someone to "post 60" without ever hearing any other traffic or ID from them.

Typically, it is "340 post 60" or "450 post 60".

Does anyone know who that is, and where they are located? I'm in Mansfield, but it sounds like it's coming from a long ways away.

Rob

That strongly suggests ambulance dispatching. When an on-duty ambulance has no assignment, their dispatch will assign them to stand by at a specific 'post', typically a point in their territory with the least nearby coverage.

Rob,

The "Post 60" reference sounds like an EMS provider moving a unit up to fill in a coverage gap. So I'm guessing it's not Glenn Heights, as their FD runs EMS, I believe, with back-up from Desoto & Red Oak. I don't recall any such 'Post xx' traffic on Glenn Heights. I have the two separated with pl/dcs entered. Balch Springs, being on the same frequency, will most likely be the source on 154.400, assuming you're using a scanner without pl/dcs functions.

AMR, at one time, IIRC, actually provided dispatch services, in addition to EMS, for either Seagoville or Balch Springs. (Believe it was Seagoville. They may still do that for all I know.) I think TLC provides Balch Springs EMS.

I haven't monitored AMR with any regularity since LifeStar moved off those frequencies. TLC is on the same LTR system as Box 4/DFR 896.

Correct on TLC. They have a box at Seagoville and Balch Springs. I believe post 60 is a half-way point they move the box that's not on a run to when the other one gets a call. They are dispatched on the fire freqs:

Balch Springs 154.4 PL 151.4
Seagoville 155.49 PL 167.9

I believe the TLC dispatcher can dispatch on the fire freqs from their comm center. They are on 450 LTR for other comms and all the nursing home stuff.

Sounds like USPS Inspectors are
now operational on their new P25
digital channel - 406.3375 NAC 482.

Extensive encryption was used Friday
afternoon. However, I was able to
capture some very brief transmissions
in the clear, and radio checks with
"control".

I don't normally listen to them, and had
taken 417.600 out of my scan list because
their communications were so darn boring
(check ins and 10-8's). But maybe with this
new channel or system it will be more
interesting to listen to. Time will tell.

That is TLC's Post 60. It's Beltline and 175. If 340(Seagoville) or 450(Balch Springs) are both on call a system truck moves to Post 60 to cover the two cities. Depending on the level one of them may go to 60 untill a system truck is available. The goal is to have at least one truck available. Late at night there is usually an MICU(Me) sent down there in the event one of them gets a call and it backfills that city. Also covers the DCFR district, giving three trucks on the southeast end of the county.

Thanks, Bill! That's great information, and I appreciate it. Who exactly is paging out those post-ups? Is it the dispatchers for the respective FD, or is the TLC dispatcher actually transmitting on those fire frequencies?

Does anyone know when Balch Springs FD stopped running their own EMS? I know it's been a long time. I remember being in a medic refresher class around 94 with someone who was doing EMS in Balch Springs. But at least up through the late 1980s, the FD still ran ambulances.

Too bad someone can't convince Dallas FD to do the same!

TLC dispatch can dispatch on Balch Springs, Seagoville and DCFR channels. They are the ones dispatching the post moves. Dispatch can talk to the engine but we can't......How's that for interoperability.
I know Balch Springs has contracted out since at least 2001. AMR had the contract when I came back then. Dallas will never change. Remember, that's the city designed on ineptitude. If it's stupid then it will work for them. Their motto should be 'If its broke we'll spend the money to make sure it will never work.'

Artificial intelligence is no match for natural stupidity.

29172. Dallas Static Bursts

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-06 07:42:07 UTC
From: Andrew Tucker
Topic: 29172 Message: 29172

When listening to Dallas Fire Rescue Channel 1, I am hearing a very loud burst of static after every transmission. Sometimes it is so short that it can barely be heard, other times it lasts 3 or 4 seconds before stopping. My squelch is turned all the way up, so I dont think that is the problem. Is anyone else hearing this or am I just lucky?

From: Jay Pinkerton
Topic: 29175 Message: 29175

Trying to upgrade from
Version 1.10.01
to
Version 3.01.00

I got 1.20.13 installed.

Got my ESN and ESN Check sum and I guess my Ver 3 Registration Key.

Now my uniden page says get Ver 3 Firmware. When I click on it it shows:
Retrieve BCD396T V3.01.00 Firmware Update
Retrieve BC_VUP_v2.0.0.3
Retrieve BCD396T V3 Instructions

Ver 3.01.0 Instructions says to install BC_VUP V2 first. It shows the
Ver 2 update but no instructions or Registration key.

BC_VUP V2 asks for Registration Key and *scn file. Last file I show is
Version BCD396T_V1_10_01 and it won't install.

I'm stuck. I think I need an updated scn file and a Ver 2 registration
key.

Can I skip the Version 2 installation?

Is it still doing that for you? I monitor Dallas with a squelch inverted Motorola, so I never
heard any squelch bursts. But I tried today with a non-PL scanner and it sounds normal to me.

Good Afternoon Group.
I know there has been talk in the past about PHI helos and freqs and stuff. But recently i have been wanting to monitor them, from Dallas. I did find an old posting with a UHF and a more recent VHF freq posting, are those still current? I am guessing the VHF 159.765 is in use but am i too far out to hear it, as i think its for the FTW side of town.

Thanks in advance Group.

29194. Storm Spotting

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-15 20:05:05 UTC
From: Blaine Brooks
Topic: 29194 Message: 29194

I know we are out of the season, but nonetheless,
here are two very good links to have once April
rolls around again.

http://www.srh.weather.gov/fwd/spotter.php

The above link is primarily for those who
would like to report weather to the NWS,
but have not been trained in storm spotting.
I know that for awhile this form had been down.
Nice to see it back up.

The other link is for trained storm spotters that
have taken the basic and advanced storm
spotting classes that perhaps are not involved
in Skywarn, or are not ham operators.

http://espotter.weather.gov/

You have to register on this one, but it's all
very easy.

Once registered, you can log in and give reports.

Of course there is always the phone:

1-800-792-2257

Put this one in your contacts list in your
cell phone. Even if you're a ham, you never
know when you might not hit a repeater
with your radio.

There are direct lines into NWS, (beginning
with 817) but the above number is the more
preferred method.

Whhaaaat? Come on Blaine. You know we don't have just one tornado season in the Metroplex. One of the worst tornado touchdowns was on December 13th of 1984. Wiped out west Mesquite.

Also, the Ft. Worth office does not participate in the eSpotter program from what I've been told. (I may be wrong, but I'd check on that one)

Thanks for the links to the Skywarn classes. Can never have enough of those in my opinion.

NWS FWD does have the support to view eSpotter reports. however, I discussed the use of eSpotter with them (having a computer in the vehicle in which I normally spot would make it easy), it was inferred that they place far less weight on eSpotter reports compared to reports via phone and radio from known, trusted spotters/groups.

From: Tracey W. Singleton
Topic: 29198 Message: 29198

Hey folks, any spotters that use any of the GrLevelX products, be sure and sign up for SpotterNetwork at www.spotternetwork.org.

By downloading the client software you can either tie it into your GPS, or manually specify a lat/lon location and have your location as well as all of the other spotters in your area viewable as a dynamic placefile. (http://www.spotternetwork.org/feeds/grlevelx.txt)

You can also view this info using Google Earth and StormLab.

Supposedly, this info is forwarded to APRS also. This would be great if you have internet access but not APRS equipment in your vehicle.

You don't have to be a ham operator to participate in this program, and it also allows you to submit weather reports.

Next in line for the hard-core spotters on list...the National Storm Chaser Convention is coming up in February in Denver.
www.chaserconvention.com

The 2009 National Severe Weather Workshop will once again be held in Norman on March 5-7.
http://www.norman.noaa.gov/nsww2009/

There are some very interesting things about to get rolling this next year in the weather world. ie, Vortex II.

Food for thought...

29200. NASA/Space Shuttle/Station Audio 441.950 Mhz

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-16 17:47:28 UTC
From: Charles Mumphrey Kc5ozh
Topic: 29200 Message: 29200

Hello Group!!
Guess Who?..... Yes! Charlie Kc5ozh....
In case you have not heard/noticed. The space shuttle, Endeavour, will be docking with the International Space Station today, Sunday 16th of November, current tentative schedule is set for 4:04PM CST. There is Nasa/Space Shuttle/Station Audio being re-transmitted on our 95 {441.950 MHz}, local Amateur Radio repeater in Rowlett, Texas. You may be able to hear the transmissions if you are close enough to Rowlett. If not, there are other freqs available in the DFW area you may hear. Thanks to Echolink and the WWW, HAMS are able to continue to use this repeater by RF without any interference to the SPACE SHUTTLE. :-}
NASA TV is not available on Time Warner Cable ..... BUT, you may go to the following internet link and watch Nasa/Space Shuttle/Station activities along with listening on your radio/scanner.
http://www.nasa.gov/multimedia/nasatv/index.html
About the middle of the page under the column labeled "Multimedia", click on "NASA TV", and it will take you to the action! Should be some neat, live video, of the shuttle docking with the space station.
Other, BUT, certainly not all, NASA/Space Shuttle/Station Audio re-transmissions on Amateur Radio Frequencies that you may receive in the DFW area, follows, listed in MHz:
145.190
145.310
146.600
441.325
441.950
445.000
448.750
Any questions or concerns, feel free to contact me off list. Thanks again for listening to Rowlett's, Kc5ozh Amateur Radio Repeater System.
Happy Scanning!!
Charlie

"It is not the class of license the Amateur holds, but the class of the Amateur that holds the license."

Charles Mumphrey
Amateur Radio Station Kc5ozh
Repeater System:
Rowlett Main: 441.325 MHz + 162.2
Dallas: 441.950 MHz + 162.2
Rowlett II: 441.950 MHz + 110.9

From: KC5RHB
Topic: 29194 Message: 29201

Someone has been watching too many "Storm Chaser" videos. And what
does this have to do with scanning?

The NWS would like reports from the public to come in on their link
that was mentioned before http://www.srh.weather.gov/fwd/spotter.php
and I belive by those who know what they are talking about and know
what they are reporting.

I believe they get too busy to answer the phone sometimes and I
believe they would like to leave the line open for law enforcement, etc.

You would be surprised how many people out there dont know what they
are looking at and should pretty much stay home.

Anyways, make any storm reports via the NWS link only if you know what
you are doing.

And please don't test me, I've been doing this tooooo long, long
before GRLevel3, WeatherTap, laptops, smart phones, ect.

Have a Great Day!

David, KC5RHB

I agree with Blaine totally on this. I am a police officer and I listen to the scanner (Skywarn) more during bad weather than any other time (could be because I have all the area agencies programmed in my work radio) so it has alot to do with scanning.

Stay safe all...
Randy

I thought this group was about scanning. Maybe I was wrong. After 26 years of being a ham, I don't need Skywarn training. I enjoy the scanning information. I don't need the weather net teachers.

Good point Blaine. Where is scanning and skywarn the same. I still laugh at a RACES meeting where the RACES person was above the law. Sounds like a bunch of Technician class Blue Lighters. No wonder they sometimes get a bad name with government.

The FWD CWA (county warning area), which includes some 40+ counties does have two severe weather seasons and includes the fall season.

Remember Dec 29, 2006...some 30+ Tornado Warnings were issued that day.

You know, for what it's worth it's a no win situation for everyone.

I could step up and say, "no more storm spotter" conversation; which would tick off half the group.

I could say, "storm spotting chatter is okay" and I'd piss off the other half.

So ... like ... be grown ups and come to a peaceful resolution, eh?

Thank you.

Well, at least its not trainspotting or sheep worrying.

At any rate, I don't really give a crap about what Hams are doing 99 percent of the time (Ruined by listening to Walt on 2m back when).

But if the bad weather comes, I drag out the old scanner with all the repeater stuff on it and listen to the storm spotting. That and the radar gives me a much better idea of whats coming, since NOAA goes into Chicken Little mode and WBAP hates to interrupt their talk-radio nonsense for anything important. And the sirens are about as useful as you-know-what on a boar.

From: Greg Higgins
Topic: 29194 Message: 29210

To the group as a side note.

The NWS DOES NOT "certify" anyone and there IS NOT a designation as a CERTIFIED STORM SPOTTER. The term "certification" implies that a person is qualified to perform a job or task and is confirmed by some form of external review, education, or assessment. One of the most common types of certification in modern society is a professional certification , where a person is certified as being able to competently complete a job or task, usually by the passing of an examination. Typical, a person must also maintain their certification through continuing education. Certification also implies some form of liability on the part of the agency that performs the certification process.

Skywarn training is just that, training. Look at the piece of paper that was provided at the end of the day. It states

Certificate of Completion

This certifies that
- attendee name -
Attended and Completed the Severe Weather Spotter Training Program

Nowhere does it state or imply that the attendee is a certified storm spotter.You simply attended and completed a course of instruction.

Not trying to be a complete a** but this is something that we have run into time after time and needs to be clarified.

Greg Higgins

This is a cool toy. It's a motorola advisor gold set on the vhf
frequency and capcode that all the pagers for DFD top brass have.

You can see all page outs etc. No subscription needed...

$70 oBo

Is there any way to program a motorola advisor gold (or any other pager) to monitor any (1) of the following Fire Departments: Benbrook, White Settlement, Fort Worth, Lake Worth, or Samson Park? If I could receive page outs for more that one of these agencies that would be great, but I would be happy just to figure out how to program 1.

Thanks,
Jared K.

depends on what frequencies they use.. I think benbrook just uses a
2-tone sequence.

You could just get a VHF 2 way radio like a vertex vx-800 and program
all the stuff into it and leave it in scan....

or...gasp..a scanner.

I already own multiple scanners, but I just wanted a pager so I could see the page out ticket. So, is there a way to program an alpha-numeric pager to receive page outs for Benbrook, or White Settlement? If so, how would I do it?

Thanks,

29215. BC246T

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-21 03:27:17 UTC
From: Tim Dale
Topic: 24392 Message: 29215

I picked up a uniden BC246T trunktracker III for monotoring comunications in an emergency. I bought it from a friend who never used it. He said that it was a good scanner from its specs.

I live in Lewisville and i was told that mostof the local PDs use trunking radios. So I hope this trunking scanner will pick up many of the LE nets, but i really have no idea how to program this scanner.

I was wondering if there is any free programing software out there for the BC246T

I would like to be able to pick up all the PD nets in the DFW area, and any other good frequencys to monitor if there is an emergency.

any idea if the BC246T will fit my needs?

Thanks,
Tim

From: Chris Easley
Topic: 24392 Message: 29217

Hi Tim,

The BC246T will cover you for most of the DFW Metroplex. However if you want
to monitor anything digital, say Grand Prairie or Mansfield for instance, than
your going to be out of luck.

As far as free software, give this a try:
http://bctool.org <http://bctool.org>

Then if you don't already have one, get a paid subscription to
http://radioreference.com <http://radioreference.com>
Once you have your subscription to RadioReference you will be able to download
conventional and trunked radio systems directly into BCTOOL. Then the only thing
you would have to do is customize your text tags to appear the way you want them.

You can get a paid subscription to RR for as little as $15.00. And it's well worth it.
If for nothing else, to be able to download their database info directly into your software.

Happy Scanning,

Chris

29218. Re: BC246T

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-23 13:56:27 UTC
From: Brent Willcox
Topic: 24392 Message: 29218

All of the law enforcement in Denton County use Motorola Type 2 Analog Smartnet presently, so the BC246T will work great to monitor most of the 800 trunking in the area until things eventually go over to APCO-25.

It looks like there is a free piece of software called Freescan that will program that radio, according to http://wiki.radioreference.com/index.php/BC246T
Freescan is located at http://scannow.org/. It will even grab the data out of Radioreference.com (if you subscribe to RR) and put it into the radio for you.

The Butel ARC246 software and the Uniden UASD software are also good choices, although they do require $.

Here is Lewisville:
http://www.radioreference.com/apps/db/?sid=46

> I was wondering if there is any free programing software out there for
> the BC246T

I use FreeSCAN, which will let you copy/paste in the data from Radio
Reference or elsewhere; pretty easy.
http://wiki.radioreference.com/index.php/FreeScan_User_Guide

> I would like to be able to pick up all the PD nets in the DFW area,
> and any other good frequencys to monitor if there is an emergency.

Here's the general area:
http://www.radioreference.com/apps/db/?ctid=2579

I seem to remember that it's harder to DX trunked systems than
conventional; some scanners won't let you program in trunked systems
unless you have a good lock on the control channel[s]. I haven't
tried this with the 246 but I am sure others have.

> any idea if the BC246T will fit my needs?

The 246 is pretty fantastic. It won't do digital, which is the coming
thing, but must local PDs are still analog.

I have a .996 file (a FreeSCAN file) for Richardson, DART, and a few
odds and ends here:
http://www.mousetrap.net/~mouse/scanner/richardson.996
if you want to download it and stick it in the scanner with FreeSCAN.
Something to give you an idea what trunking info looks like in there.
I do not claim to be particularly good at organization so do not model
your 246's tidiness around mine.

From how I'm reading the article, and viewing the map links embedded in
it, it appears to be largely a realignment within Central Patrol,
specifically sector 140, which includes the Lower Greenville Ave. area.
New map here <http://belmontna.org/images/centralDPD2009.html> .

29226. Rollover MVA in Cleburne this AM - 2 CareFlite helicopters also en-route

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-26 14:21:49 UTC
From: Chris Easley
Topic: 29226 Message: 29226

MVA occured at approximately 7:47 a.m.

Cleburne FD is working a rollover accident with injuries at US-67 and North Nolan River Rd. It is involving a pick-up with kids inside.

Right now CareFlite 5 and 6 are in the process of finding a suitable LZ. Also 2 CareFlite ground ambulances (Medic 901 & 902) and 1 CareFlite supervisor (Medic 909) are also on scene.

For the life of me I don't know why Cleburne FD keeps using State Med 1 to coordinate LZ info with CareFlite. I could understand it when they were on the PassPort system, but they are back on conventional and have 2 new towers in Cleburne to operate their conventional frequency off of. In all my years listening to Cleburne FD work LZ's with CareFlite I have never heard any communication problems between CareFlite or Cleburne when they used Cleburne's conventional frequency.

This morning they were having all kinds of problems usins State MED 1.

Here you have this new strong conventional frequency and you don't even use it to it's fullest potential. Makes no sense to me.

Anyway at this time CareFlite 5 has lifted with their patient and 6 has landed on scene awaiting their patient. Good listening in Cleburne this AM.

Chris

29227. RE: [dfwscan] Rollover MVA in Cleburne this AM - 2 CareFlite helicopters also en-route

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-26 14:40:16 UTC
From: Cross, Robert
Topic: 29226 Message: 29227

The communications problems down there are because of the "switch" back and forth between systems. Cleburne has been the one requesting we contact them on these frequencies and often times our pilots either rely on our ground ambulances to talk to them while doing patient care or just do a high recon and land. The initial 911 call was taken by my partner and sounded bad so we made an executive decision to place an aircraft on standby. The distance made it an airborne standby and once the ambulance made scene, they determined that a second helicopter was needed.

All in all, it was a bad wreck but things could have been worse and we are going to work on the communications issues.

Robert

Just like the Texas Fire freqencies, I have Med 1 and Med 2 in all my banks and radios and is constantly on during scan, and it seems like here in the past couple of weeks Ive been hearing a lot of CF traffic on Med 1. Just the other day I heard CF air calling Benbbrook Fire on Med 1 and several calls in the Johnson County area. So, to keep track of communications I usually have everything progrmamed and open on scan, because you never know who might be talking on what.

Happy Scanning,

David, KC5RHB

Maybe they are communicating on the state frequency because Cleburne's
new fire channel hasn't been reprogrammed in the CareFlite radios.

29230. RE: [dfwscan] Rollover MVA in Cleburne this AM - 2 CareFlite helicopters also en-route

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-11-26 22:36:31 UTC
From: Terry
Topic: 29226 Message: 29230

Chris, there's a couple of reasons to use an interop channel. First, while it's great CareFlite and others have primary channels in their radios they don't have them all. They should (and I'm sure do) have the interop channels. All fire, police and EMS should have those common channels as well. In theory it should make it much easier the tell a responding helicopter to use Med 1 than having to coordinate which fire or police channel etc. In places like Kaufman Co where the Terrell FD has their own repeater but the Terrell Volunteer FD are likely to be on the county fire channel things can get confusing. Bottom line is it's suppose to make it easier for the helicopter to have good comms with the ground.

Also there should be at least one person if not an engine company handling the LZ. That person(s) should set the LZ, talk the aircraft in and remain as a safety officer until the aircraft is safely off the ground. If you're the LZ officer you really need uninterrupted comms with the aircraft. Often this can be difficult on a primary channel due to all the other radio traffic. A dedicated channel is really a good idea.

The whole reason for interop channels is to facilitate communication with outside agencies. In this case it sounds like they're doing it right, which is unusual!

Terry

Subject: [dfwscan] Rollover MVA in Cleburne this AM - 2 CareFlite helicopters also en-route

MVA occured at approximately 7:47 a.m.

Cleburne FD is working a rollover accident with injuries at US-67 and North Nolan River Rd. It is involving a pick-up with kids inside.

Right now CareFlite 5 and 6 are in the process of finding a suitable LZ. Also 2 CareFlite ground ambulances (Medic 901 & 902) and 1 CareFlite supervisor (Medic 909) are also on scene.

For the life of me I don't know why Cleburne FD keeps using State Med 1 to coordinate LZ info with CareFlite. I could understand it when they were on the PassPort system, but they are back on conventional and have 2 new towers in Cleburne to operate their

conventional frequency off of. In all my years listening to Cleburne FD work LZ's with CareFlite I have never heard any communication problems between CareFlite or Cleburne when they used Cleburne's conventional frequency.

This morning they were having all kinds of problems usins State MED 1.

Here you have this new strong conventional frequency and you don't even use it to it's fullest potential. Makes no sense to me.

Anyway at this time CareFlite 5 has lifted with their patient and 6 has landed on scene awaiting their patient. Good listening in Cleburne this AM.

Chris

Maybe because they are actually following the Texas Statewide Interoperability Channel Plan. (I assume that by "State Med 1" you are referring to 155.340)

Tom

29232. Long distance mutual aid - probably off topic

Yahoo group: dfwscan (2008 — 2009)

From: Ben Saladino(YG)
Topic: 29232 Message: 29232

This from the Fort Worth city council agenda. I wonder if they bring their own radios to use on interop channels or if the Feds or locals up in DC provide radios.
Ben

>>>>>>>>>>>>>>>>>>>

DATE: 12/2/2008 REFERENCE NO.: **C-23193 LOG NAME: 35PRESINAUG09
CODE: C TYPE: CONSENT PUBLIC HEARING: NO
SUBJECT: Authorize Execution of a Memorandum of Understanding with the United States Attorney for the District of Columbia, the United States Marshal Service and the Metropolitan Police Department of Washington, District of Columbia, to Provide Fort Worth Police Officers for Security at the 2009 Presidential Inauguration and Adopt Supplemental Appropriation Ordinance

---

RECOMMENDATION:
It is recommended that the City Council authorize the City Manager to:

1. Execute a Memorandum of Understanding with the United States Attorney for the District of Columbia, the United States Marshal Service and the Metropolitan Police Department of Washington, District of Columbia, for the provision of Fort Worth Police Officers for security detail at the 2009 Presidential Inauguration and related events, to take place January 19 through January 21, 2009; and

2. Adopt the attached appropriation ordinance increasing the estimated receipts and appropriations in the Police Department General Fund in the amount of $90,000.00.

DISCUSSION:
The Presidential Inaugural Planning Committee has requested national assistance for security at the upcoming January 2009 Presidential Inauguration. The Chief of Police for the City of Fort Worth has recommended that up to 100 officers and supervisors be authorized to participate in this historic event on behalf of the City of Fort Worth.

The participating officers will be federally deputized for the tenure of the officers' assignments related to the inauguration as Special Deputy United States Marshals. The officers will be responsible for (1) performing necessary law enforcement steps to keep the peace of the United States; (2) enforcing federal law; (3) protecting visiting foreign officials, official guests and internationally protected persons; (4) taking necessary law enforcement steps to prevent violations of federal law; and (5) enforcing

District of Columbia law.

The City will be reimbursed by federal funding after the event has concluded for salaries, overtime payments and fringe benefits for officers participating in the event. Travel expenditures will also be reimbursed. Airline travel costs of approximately $90,000.00 must be prepaid to American Airlines on December 4, 2008.

The Fort Worth Police Department has identified staff for participation whose absence will not impact patrol levels, including Crime Response Teams and other specialized units. This will eliminate the need for staffing to offset the absences for the travel period since local staffing needs are not reimbursable through this program.

The Memorandum dictates that, while acting in the course and scope of their assignments under the Memorandum of Understanding, the officers will be considered to be federal employees for purposes of liability to include disability or death of an officer.

> is unusual!

Amen to that.

I've heard Careflite be given a tac
channel for comms for LZ, and not
be able to raise the BC or safety officer,
because someone is/was operating
on the wrong channel/talkgroup. If it
was just ONE common channel that
everyone knew about, it'd make it so much
easier. But public safety communications
and simplicity are more often than not
two separate entities. Everybody gets
sold, and usually falls into the trap, of
all the unneeded extras, when in reality
it's all very simple.....

Can my agency talk with surrounding
agencies (for mutual aid situations)
over a reliable communications
network (without drop outs, dead
spots or excessive interference in
life threatening occurrences)?, and
does everyone know what channel(s)
/talkgroup(s)/SOP to use when such
situations arise.....

It's interesting how the LACK of
communications and intentions can
seriously affect a COMMUNICATIONS
network.....:)

My guess is they'll probably use US
Capitol or Park Police radios, or be
on one of the fed interagency systems
up there.

In agreemnest with Blaine, FWPD officers will probably be provided communicatins up there. Just like the Hurricane IKE detail, when FWPD sent two teams of officers down to help Houston Police, the officers were provided HPD radios (HT'S) for communications.

And if FWPD were to use their own radios, the only channels they will be able to communicate on would be the NPSPAC channels in simplex mode. Unless Fort Worth uses that new fancy mobile repeater they got from Motorola, if the City has even bought that thing yet.

But more than likely they will use the communications up there.

Happy Scanning,

David, KC5RHB

Please EMAIL ME back at Nolimit2345@... or call 972 415 1733 thanks! I am asking $425.00 OBO

TrunkTracker IV (Motorola APCO 25 Digital, Motorola, EDACS, LTR)

6000 Dynamically Allocated channels

Close Call☐ RF Capture Technology - Instantly tunes to signals from nearby transmitters

Fire Tone-Out

Alpha Tagging

100 Quick Key System Access

Preprogrammed Coverage of Over 400 Cities

Continuous Band Coverage* - 25MHz to 1.3GHz Excluding UHF TV and Cellular

Compact Size

Audio AGC

Automatic Digital Threshold Adjustment

Search with Scan

DCS/CTCSS Rapid Decode - Instantly Detects and Displays the Subaudible Tone So You Can Quickly Determine the System Settings.

S.A.M.E. Weather Alert - Specific Area Message Encoding - During a NOAA Weather or Emergency Alert, a code for your specific location will alert you to severe conditions in your immediate area.

PC Control/Programming (Free Download)

Public Safety Scanner

Please EMAIL ME back at Nolimit2345@... or call 972 415 1733 thanks!

The Radio Shack outlet store in Fort Worth has a Pro-2096 in the "back room" for about $230. Saw it last night (Sun), right before they closed.

Almost certain it is the Pro-2096 digital, but I would call them first before going over there.

http://www.cleburnetimesreview.com/local/local_story_336171817.html
<http://www.cleburnetimesreview.com/local/local_story_336171817.html>

Found this article in today's Cleburne Times Review. In it, the Cleburne Fire Chief said that the new system is
high-band and will have a trunking system. I know that JoCo tried a LTR Passport system this year. And we all
know how well that went. But it appears they may be trying out another kind of TRS. I had heard that after the
failure of the Passport system, they were going to be conventional for now, then possible another type of TRS later.

I have also noticed that 46.100 has greatly improved. I can now hear both sides of a conversation, whereas before
you could only hear the dispatcher, that is unless you were close to a scene. That comes, I sure, as a result of JoCo
making use of their new towers. JoCo has also made use of Cleburne FD's old dispatch channel 154.145 . It is now
being used a cross-band repeater with a DCS of 026. Quality on that freq has greatly improved since it first went on-line.

Just wondering if anyone might have some additional info as to what kind of TRS they are going to,
if in fact that is what they are doing. So far everything is still conventional.

Chris

From: Terry
Topic: 29247 Message: 29247

Press release regarding DPD computers:

DPS troopers equipped with in-car computers

An effort to equip all DPS troopers with in-car computers is sweeping across Texas, now finishing up in the Houston and Austin areas.

The $15 million project, approved in the last legislative session, is mostly complete. All areas of Texas now have at least some patrol units equipped with the wireless technology.

When the project is completed, nearly 2,000 Highway Patrol and Commercial Vehicle Enforcement units will have the in-car computers.

"We appreciate the Legislature providing us with this capability'' said interim DPS Director Stanley E. Clark. "From an officer safety and efficiency standpoint, this puts our troopers on the cutting edge and moves us light years ahead in our law enforcement capabilities."

With in-car computers, troopers have the ability to instantly identify wanted persons and stolen vehicles. The secure network provides real-time alerts, digital photographs and homeland security information, and equips the units with GPS (Global Positioning System) technology. The computers will also speed up the citation process.

DPS is also testing in-car computers in the Texas Ranger and Criminal Law Enforcement divisions.

When the project is completed, nearly 2,000 Highway Patrol and Commercial Vehicle Enforcement units will have the in-car computers.

"We appreciate the Legislature providing us with this capability'' said interim DPS Director Stanley E. Clark. "From an officer safety and efficiency standpoint, this puts our troopers on the cutting edge and moves us light years ahead in our law enforcement capabilities."

With in-car computers, troopers have the ability to instantly identify wanted persons and stolen vehicles. The secure network provides real-time alerts, digital photographs and homeland security information, and equips the units with GPS (Global Positioning System) technology. The computers will also speed up the citation process.

DPS is also testing in-car computers in the Texas Ranger and Criminal Law Enforcement divisions.

Hopefully better than the crappy ones Fort Worth has. I honestly don't know how the officers can stand them.

Oh, they work really good. It's a completely unique and clean design;
unlike anyone else's.

The biggest headache is keeping the GPS connected to all the servers so we
can see where they are. (A fantastic safety feature for our Troopers.)

With all the 27's , 28's and 29's the Troopers see them within an average of
3 to 5 seconds after they've been sent.

Sounds cool. I don't know why more departments don't use GPS. If I was out there alone and something happened and I couldn't get to the radio, I would want someone to know where I was. It also allows supervisors to keep tabs on speeding, goofing off, etc...

Southwestern Bell apparently had them in some of their service vehicles, and if the technician was speeding or stayed in one place too long when not on location, he got a visit from the supervisor.

29255. Johnson County Fire?

Yahoo group: dfwscan (2008 — 2009)
Date: 2008-12-05 15:05:30 UTC
From: KC5RHB
Topic: 29255 Message: 29255

WOW, Chris was right 46.100 is coming in loud and clear, on both sides. When I was hearing traffic on 46.100 I switched to 155.295 and heard nothing. I know that frequency used to re-broadcast 46.100 on it. I checked RR and it still showed to be on the sheet and that 154.145 is now doing the re-broadcast. So, is 155.295 no longer active?

And this is for RR, I noticed when looking at the JC frequencies, on Burleson, I have an update on their old conventional frequencies:

453.100 (100.0) Is the PD back-up channel, if TRS goes down. I've also heard some officers use it now and then for some chitchat and off duty work. Dispatch still monitors this frequency 24/7

453.275 (100.0) Is now used by the Hidden Creek Golf Course personnel

453.500 (100.0) Is now FD back up, and FD also uses this frequency for LZ info for air ambulances.

See I don't understand that. Even Burleson PD, I here it all the time, their computers crashing, camera failure, and its funny, they always have camera failure during traffic stops, DWI, or when they are having problems with someone, I guess they don't want to record the "beating". Burleson has that mobile video type computer where the in car camera is recorded on the hard drive and they turn the hard rive in after shift. I believe they call it a MVB. But even with FW, I keep hearing on the MDC problems.

So is it the software or the computer?

I run my computer all the time in my truck. All I use is your standard air card with a wireless provider. Ill have multiple applications up, running messenger, and drive all over the county and never have a problem with losing connection or something crashing.

But its nice to hear of a PD agency, such as TXDPS having a decent in car system. Because if anyone needs a good in car system with GPS its DPS.

I know FW is running GPS now, and a while back I heard about them getting new software for the MDC's, so I don't know. But it can't be that hard to have a decent in car system that doesn't crash all the time.

Anyways, Happy Scanning,

David, KC5RHB

We used to have PC access to a limited amount of info on the Fort Worth system up at the Code Blue office, but about a month ago they took away our access. I wonder if this is due to the new system or upgrade. No word on when we get access again. I did notice the radio traffic has declined.

I know the original system was iffy, but the Tiburon system they implemented about 2-3 years ago was problematic as well. Apparently no one bothered to consult the actual users or consider they had to access the system while operating a vehicle.

What I noticed was the PC interface crashed all the time. You just exited the program and restarted it and the problem went away. I finally quit using it as it was more of a headache than an asset.

Hah.

Yeah, god forbid a comm manager, supervisor, purchasing agent, chief (name your brass of the day) should actually consult with the USERS of a system to get their input (i.e. the policeman on the beat, or the firefighter on the fireground)

Sad, but this crap happens every day in the public safety world, unbeknownst to Joe and Jane taxpayer. Billions of dollars wasted on extraneous bells and whistles. Need we mention our Johnson County neighbors to the south? But don't tell that to the snake oil marketing/sales person from the radio companies.

I am passing on this information from another group:

Bill, AF4B

This contact shares the "footprint" nearly equal time with Fort Worth. We are planning to share the contact with Bonnie Tyler's (KE5HRD) Fourth Grade Class at Walnut Creek Elementary in Azle, TX. Of course the kids in Richmond will actually be asking the questions, but anyone can "simulate" the contact and hear Sandy Magnus's answers. Join the fun and listen on 145.800 Mhz at 9:45 am CST on 9 December.

73 - Keith, W5IU

-----Original Message-----

On Behalf Of Ransom, Kenneth G. (JSC-OC)[BAR]
Sent: Friday, December 05, 2008 3:14 PM
To: sarex@amsat. org
Subject: [ARISS-press] ARISS event - Stephen F. Austin Elementary School,Richmond, Texas, USA, Tue (Dec 09) at 15:45 UTC

An International Space Station Expedition 18 ARISS school contact has been planned with participants at Stephen F. Austin Elementary School, Richmond, Texas USA on 09 December. The event is scheduled to begin at approximately 1545 UTC.

The contact will be a direct between stations NA1SS and NT5SM. The contact should be audible over central and eastern North America. Interested parties are invited to listen in on the 145.80 MHz downlink.
The participants are expected to conduct the conversation in English.

The students at Stephen F. Austin Elementary School in Richmond, Texas have studied space and the identifying characteristics of objects in our solar system, including the soon, planets and moon.

Each year the fifth grade students participate in a simulated space shuttle mission, performing tasks that would happen on a regular shuttle flight. Each grade level is involved in some manner with the various missions that occur throughout the day. The school has integrated the ARISS contact as part of this activity.

Participants will ask as many of the following questions as time allows:

1. How would you be rescued if you floated off during a spacewalk?
2. What does a hurricane look like from the Space Station?
3. Do you burn calories the same way in space as on Earth?
4. Have you ever seen the Aurora Borealis from space?
5. Has an asteroid ever hit the space station?
6. Is sleeping on the space station difficult because you are weightless?
7. Do you tell the time the same way in space as on Earth?
8. What is the most life-changing experiment you have done?
9. Have you seen any unusual objects floating around in space?
10. How do you train for zero gravity?
11. Do you miss going outside and getting fresh air?
12. Do you ever vomit because your food is floating around in your stomach?
13. How do you stop your muscles from getting weak in zero gravity?
14. Do you think people will ever live on another planet?
15. What does it feel like at the exact moment you enter zero gravity?
16. How do you feel about the new urine-to-drinking water system?
17. Does a cut bleed or heal differently when there is no gravity?
18. How dos the carbon dioxide/oxygen cycle work on the space station?
19. How often do you get to talk with your family?
20. How difficult is it to change clothing when you are weightless?

Information about the upcoming ARISS contacts can be found at http://www.ariss. org/upcoming. htm#NextContact .

Next planned event(s):
1) Istituto Comprensivo "Marco Polo", Grado I-34073, Italy, Wed 2008-12-10 10:11 UTC
2) 2 Circolo Didattico, San Giuseppe, Mola di Bari, Italy, Fri 2008-12-12 14:18 UTC

ARISS is an international educational outreach program partnering the participating space agencies, NASA, Russian Space Agency, ESA, CNES, JAXA, and CSA, with the AMSAT and IARU organizations from participating countries.

ARISS offers an opportunity for students to experience the excitement of Amateur Radio by talking directly with crewmembers on-board the International Space Station. Teachers, parents and communities see, first hand, how Amateur Radio and crewmembers on ISS can energize youngsters' interest in science, technology, and learning. Further information on the ARISS program is available on the website http://www.ariss. org/ (graciously hosted by the Radio Amateurs of Canada).

Thank you & 73,
Kenneth - N5VHO

Welcome to the hobby!

The first thing you need to do is LISTON. Monitor a few weather nets and
pay attention to how the spotters interact with net control.

You really need to go to a Skywarn School before you jump on the air.
There are a bunch coming up after the first of the year.

Thanks for asking, many don't and just wind up blurting out things that don't need to be said.

1. Listen. If a report is near you don't clog the air with a second report of the same information, remember that air time is precious. Exception: when net control asks for conformation on a situation such as a wall cloud.

2. Learn what the reporting criteria is and only give that, not a 10 minute lecture on how the clouds came and went over and now they are gone an you have a blue sky overhead.

3. Sample report:

. K5xxx: "XXX"

. Net cntl: "XXX go ahead."

. K5xxx: "this is K5XXX, at mapsco 73q, I have to my northwest a lowering, I have warm inflow to lowering at > 25mph, heavy CG (cloud to ground).

. Net cntl: "Received."

Email we received:

Careflite,

Just letting you know Johnson County Fire Departments will no longer be using the low band radio frequency 46.100 as of today, December 9, 2008. We will be using the VHF radios for communications.

Jared,

Welcome to Storm Spotting.

I don't know what County you reside in but being an Amateur Radio Storm Spotter, I would highly recommend getting in touch with your local RACES/ARES organization if you plan on making reports over the air.

Severe weather reporting criteria is pretty much the same. Some RACES/ARES organizations have certain conditions when reporting on the air as an Amateur Radio Operator.

But before you can even get on the air to make a report, you really need to educate yourself on what to report.

As many people have already mentioned on here, if you haven't already, going to the many of the Skywarn Spotter Training classes is good place to start to get you familiar with the basics in storm characteristics. But you have to remember, these classes teach you the "basics". It is up to you to teach yourself more about being a good Storm Spotter and knowing severe weather.

Reporting is pretty simple. Remember the three W's, What, Where and When. WHAT you are seeing and reporting, WHERE did you see it, and WHEN did you see it (in severe weather reporting WHEN should be now).

Another thing to remember when reporting, and I learned this when I first started from those spotters who trained me, is the acronym KISS, Keep It Short and Simple (the last S used to say something else, but I thought that was too negative so I changed it).

But if you're serious about being a Storm Spotter, take your time, and learn the right way.

Feel free to visit my Skywarn Spotter Training Page
http://www.geocities.com/kc5rhb/skywarn_spotter_training

I have lots of links to some good information on Spotter Training.

Good luck and stay safe.

And to keep this on topic, you can listen to the Tarrant County Skywarn Net on 146.940

What do we have to do to get one of those for Tarrant RACES???? That sure would be nice. It would be fun trying to get that into Mayfest.

Burleson PD has the same type of Command Van. They had it on a residential street and still had, well, some room to pass by it.

One of the frequencies in use is: 154.145 DCS 026. Not sure what the other frequencies
are. Quite possibly using the frequencies from their 3 other cross-band repeaters.

There's a story in the Cleburne Times Review that talks about the change from
low-band to high-band. Interesting that Chief Scarbrough mentions that this
'new system' will have a 'trunking system' . So does that mean that the change
to VHF is only temporary? Or is the 'trunking' he is talking about just someting
that is additional feature that they could use or will use in the future.

Here's the link to the story:

Neat. That's an odd path. I had heard scuttlebutt it was headed to
Houston then on to Florida. So much for my intelligence. :-P

Shuttle Ferry Flight Lands in Texas for Overnight StopWed, 10 Dec 2008 03:45:08 PM CST

Space shuttle Endeavour is in Ft. Worth, Texas, after completing the first day of a trek across the country from California to Florida. Endeavour, riding atop a modified 747, left Edwards Air Force Base in California on Wednesday morning at 10 a.m. EST. The aircraft and shuttle made a refueling stop at Biggs Army Air Field in El Paso, Texas, before taking off for the Naval Air Station Joint Reserve Base, formerly Carswell AFB in Ft. Worth Texas. The flight landed there at about 4:12 p.m. EST.

The next leg of the ferry flight will depend on weather conditions between Ft. Worth and NASA's Kennedy Space Center on the east coast of Florida.

Here are some of my photos.

Yes, you can see it from 820 looking south towards the tarmac, but it's probably not the safest place to see it from the side of the freeway at night. Sounds like it will be around in the morning from what the news just said, so you might want to look from the Quebec/Cohoba 820 area.

http://www.bensware.com/photos/events/Shuttle/

Thanks to those who gave me the heads-up, and further information to be able to get these photos. I've see it before, but this gave me another chance to try for some better photos.

My bad. Actually in Lake Dallas.
Just got the IPN page. Near Lakeview
Airport. Crews are making good progress
knocking down the fire.

Great photos - as always - Ben!

Hey BTW - Anyone know what apartment complex that is on the hill near the water tower? Looks like that would be a heck of a place to live if you were a milair nut!

Reminds me of when I lived in Tampa. One of my apartments was very close to the runway for Macdill AFB. We'd sit on the balcony and watch the F-16's throw it into afterburner on some of their night time sorties. Awesome sight! Great for airshows too! No crowds!

Those are some damn good pictures Ben. Its not often the Shuttle
makes a piggy-back stop at the base. I think last time they landed at
Edwards they bypassed the base. And its not often they land at
Edwards either. Hold on to those pictures.

The last time I saw the shuttle land at the base, I was in high
school, it was still Carswell, and I remember everyone parking on the
820 bridge over Lake Worth causing a big traffic jam.

Simple: fuel. The SCAs have severe limitations with the shuttle attached - 1,000 nautical miles range, 15,000ft. service ceiling, maximum speed of Mach 0.6/397kts. Compare that with a typical 747-100 - 5,300 nautical mile range, 45,000ft. service ceiling, maximum speed of Mach 0.89/481kts.

Seems that pushing two airframes through the air, along with all the connecting hardware, results in a whole lot more drag!

I believe they'll make one more stop after Barksdale for fuel before finally reaching their destination.

Topic: 29292 Message: 29300

I heard NASA 911 (carrying the Shuttle Endeavour) telling Houston Center on 133.3 that they didn't normally fly above 15K due to temperatures and some other reasons. I heard NASA 912, the C-17 Globemaster, when they were "50 miles north of Houston" on 235.4. I imagine they were flying much, much higher. I lost radio reception from NASA 911 after they were somewhere between Waco and College Station due to their low altitude.

Thanks for the information too Terry.

Simple: fuel. The SCAs have severe limitations with the shuttle attached - 1,000 nautical miles range, 15,000ft. service ceiling, maximum speed of Mach 0.6/397kts. Compare that with a typical 747-100 - 5,300 nautical mile range, 45,000ft. service ceiling, maximum speed of Mach 0.89/481kts.

Seems that pushing two airframes through the air, along with all the connecting hardware, results in a whole lot more drag!

I believe they'll make one more stop after Barksdale for fuel before finally reaching their destination.

Looks like they're headed out at 11:00 to Barksdale.
http://flightaware.com/live/airport/KNFW

I wonder why they don't just wait until they have a clear path back to
Kenneday and make one trip, instead of hopscotching.

Ben

I updated my photos to include what I took today.

http://www.bensware.com/photos/events/Shuttle/

There was a little surprise in one of the photos. I didn't notice the
Lockheed (I assume) test bed aircraft in the bottom right of this photo.

http://www.bensware.com/photos/events/Shuttle/pages/D20_1036_edited-1.html

I made some of the photos into 1024x768 for wallpapers, and uploaded them
here.

http://www.bensware.com/photos/aviation/ShuttleEndeavour/

Happy Scanning,

Ben Saladino, KC5IRJ

On behalf of those of us who were not able to go out and see the
beast, thank you for the awesome photos! Those are definitely keepers.

I still remember seeing Enterprise at the Worlds Fair in New Orleans
back in 1984. Even though that shuttle never went into space, it was
still quite a sight to see. Unfortunately, I didn't get to see it get
flown in and out piggybacked back then either.

I was just noticing that they dipped down to 7000 feet near Houston, so my first thought was that they wanted to buzz Mission Control. But judging from their flight path, they didn't go anywhere near the Space Center.

So maybe some bigwig was able to get them to waste some fuel to fly down to Houston and buzz his house - or maybe it was just some PR side trip. Either way, that sure was a long way around just to get to Barksdale.

You are correct. They did buzz Johnson Space Center. The flight map is truly off. If you notice, Galveston bay is east of I-45. The map needs a little reorganization/updating on the website :)

I had an interesting experience with a two-way radio retailer. They keep posting a link to their website (www.dallasmobilec.com) in the Wikipedia "Two way radio" article. When I called them and tried to tell them that it was counter productive and made them look unprofessional, the guy was very agrumentitive and said "whats it to you?".
So, if you are in the market for any of the products they sell, I recommed someone else!

Thanks for the info Daniel...

So can we assume the "second" frequencies
are the inputs? (ex. 153.92, 159.195, 158.8725,
etc.?)
